<i>Preface</i>	v
1. Introduction	1
2. Geometry	9
2.1 Deformation gradient, material vectors . . . . .	9
2.2 Measures of deformation . . . . .	13
2.3 Extension, dilatation, shear . . . . .	20
2.4 Displacement . . . . .	24
2.5 Geometrical compatibility conditions . . . . .	25
2.6 Geometrical compatibility condition for singular surfaces . . . . .	27
3. Kinematics	31
3.1 Basic notions . . . . .	31
3.2 Objective time derivatives . . . . .	34
3.3 Boundaries, kinematical compatibility condition for singular surfaces . . . . .	37
3.3.1 Introduction . . . . .	37
3.3.2 Modicum of surface geometry . . . . .	38
3.3.3 Time dependence of surfaces . . . . .	42
3.3.4 Kinematical compatibility conditions . . . . .	44

4.	Balance equations	49
4.1	Balance laws in Lagrangian description . . . . .	49
4.2	Balance laws in Eulerian description . . . . .	58
4.3	Extension on membranes and interfaces . . . . .	64
5.	Second law of thermodynamics	69
5.1	Entropy inequality, thermodynamical admissibility . . .	69
5.1.1	Motivation . . . . .	69
5.1.2	Entropy inequality . . . . .	73
5.1.2.1	Entropy principle . . . . .	73
5.1.2.2	Thermoelasticity . . . . .	76
5.1.3	I-Shih Liu Theorem . . . . .	81
5.2	Isotropy, material objectivity . . . . .	86
5.2.1	Example - rigid heat conductor . . . . .	86
5.2.2	Isotropy . . . . .	90
5.2.3	Material objectivity, example: Mooney-Rivlin materials . . . . .	96
5.3	Materials with constraints . . . . .	102
5.4	Constitutive relations for various thermoelastic materials . . . . .	108
5.4.1	Neo-Hookean material . . . . .	108
5.4.2	Mooney-Rivlin material . . . . .	109
5.4.3	Biological tissue . . . . .	109
5.4.4	Ogden's materials . . . . .	110
5.4.5	Gent's material . . . . .	110
5.4.6	Generalized Blatz-Ko material . . . . .	110
5.4.7	Signiorini's material . . . . .	111
5.4.8	St.Venant-Kirchoff material . . . . .	112
5.5	Proportionality Theorem . . . . .	112
6.	Equilibrium Gibbs thermodynamics	119
6.1	Thermostatistics of gases . . . . .	119
6.2	Thermostatic theory of homogeneous mixtures . . . . .	132
7.	Kinetic theories	137
7.1	Liouville equation . . . . .	137
7.2	BBGKY-hierarchy . . . . .	142
7.3	Boltzmann equation . . . . .	147

8.	Extended thermodynamics	161
8.1	General structure . . . . .	161
8.2	Nonrelativistic ideal gases . . . . .	168
8.3	A few remarks on boundary conditions . . . . .	179
9.	Thermodynamical model of viscoelastic materials	185
9.1	Foundations . . . . .	185
9.2	Thermodynamical admissibility . . . . .	187
9.3	Viscous fluids, linear viscoelastic solids . . . . .	193
9.4	Maxwell fluid, Rivlin-Ericksen fluids . . . . .	197
9.4.1	Preliminary remarks . . . . .	197
9.4.2	Extended thermodynamics of non-Newtonian non-conducting fluids . . . . .	199
9.4.3	Thermodynamics of a heat conducting Maxwellian fluid . . . . .	212
9.4.3.1	Evaluation of the entropy inequality . . . . .	212
9.4.3.2	Transitions to second order fluids . . . . .	219
10.	Elasto-viscoplastic materials	221
10.1	Preliminaries . . . . .	221
10.2	Local configurations . . . . .	222
10.3	Crystal plasticity of monocrystals . . . . .	224
10.4	Polycrystals and orientation distribution function . . . . .	230
10.5	Thermodynamical admissibility . . . . .	234
10.6	Two particular classes of models . . . . .	236
11.	Thermodynamics of miscible mixtures	239
11.1	General structure and field equations . . . . .	239
11.2	Thermodynamical admissibility . . . . .	247
12.	Thermodynamics of immiscible mixtures: Introduction and models without the field of porosity	257
13.	Thermodynamics of poroelastic materials with the balance equation of porosity	271
13.1	General structure . . . . .	271
13.2	Two-component poroelastic materials . . . . .	284
13.3	Linear models of saturated poroelastic materials . . . . .	303

13.4	Waves in poroelastic materials . . . . .	319
13.5	On adsorption in porous materials . . . . .	334
13.5.1	Adsorption for large channel diameter . . . . .	334
13.5.2	Adsorption for small channel diameter; capillarity . . . . .	340
14.	Final remarks	345
Appendix A Vectors and tensors on Euclidean spaces		353
A.1	Reminder of tensor calculus . . . . .	353
A.2	Coordinates . . . . .	360
A.3	Euclidean shifters, differentiation . . . . .	363
A.4	Physical components . . . . .	367
A.5	Transformations of Green and Kelvin . . . . .	370
Appendix B Basic physical units		371
<i>Bibliography</i>		373
<i>Index</i>		397
