<b>Foreword</b> .....	vii
<b>Preface</b> .....	ix
<b>1 Introduction</b>	
1.1 Ground-Borne Vibrations.....	1
1.2 Analytical Approaches .....	3
1.2.1 Classical theory of wave propagation .....	4
1.2.2 Elastic medium subjected to moving loads.....	10
1.2.2.1 Elastic unbounded body subjected to a moving point load .....	12
1.2.2.2 Elastic half-space subjected to a moving line load .....	14
1.2.2.3 Elastic half-space subjected to a moving point load .....	15
1.2.3 Beam on elastic half-space subjected to moving loads...	16
1.2.4 Tunnel structure subjected to moving loads .....	18
1.2.5 Load generation mechanism .....	19
1.3 Field Measurement.....	20
1.4 Empirical Prediction Models.....	24
1.5 Numerical Simulation .....	25
1.5.1 Two-dimensional modeling .....	28
1.5.2 2.5-dimensional modeling .....	29
1.6 Isolation of Ground Vibrations .....	32
1.6.1 Trenches.....	32
1.6.2 Wave impeding block.....	33
1.6.3 Floating slab track.....	34
1.7 Evaluation Criteria of Vibration.....	35
1.8 Concluding Remarks .....	41
<b>2 Elastic Waves in Half-Space Due to Vehicular Loads</b>	
2.1 Introduction .....	45

2.2	Fundamentals of the Problem.....	47
2.2.1	Equation of motion .....	47
2.2.2	Triple Fourier transform .....	49
2.3	Solution for the Soil Response .....	50
2.3.1	Boundary conditions .....	51
2.3.2	Steady state response in time domain .....	53
2.4	Loading Functions for Moving Loads of Different Forms .....	54
2.4.1	General loading function of a moving train .....	54
2.4.2	Distribution function $\phi(z)$ of the loading .....	55
2.4.2.1	Single point load .....	56
2.4.2.2	A uniformly distributed wheel load .....	56
2.4.2.3	An elastically distributed wheel load .....	57
2.4.2.4	A sequence of wheel loads.....	58
2.4.3	Interaction forces between wheels and rails .....	59
2.4.4	Calculation of inverse Fourier transform.....	60
2.5	Numerical Studies and Discussions .....	60
2.5.1	Verification of the present approach.....	61
2.5.2	Single moving point load.....	63
2.5.3	A uniformly distributed moving wheel load .....	70
2.5.4	An elastically distributed moving wheel load.....	74
2.5.5	A sequence of moving wheel loads .....	90
2.6	Concluding Remarks .....	91
<b>3</b>	<b>2D Finite/Infinite Element Method</b>	
3.1	Introduction .....	95
3.2	Formulation of the Problem .....	97
3.3	Shape Functions and Matrices of Infinite Element .....	100
3.3.1	Shape functions.....	100
3.3.2	Element matrices .....	104
3.3.3	Damping property of materials .....	106
3.3.4	Method of numerical integration .....	107
3.3.5	Selection of amplitude decay factor $\alpha$ .....	108
3.3.6	Selection of wave number $k$ .....	111
3.4	Mesh Range and Element Size.....	112
3.5	Mesh Expansion by Dynamic Condensation.....	116
3.6	Numerical Examples .....	120
3.7	Concluding Remarks .....	124
<b>4</b>	<b>Characteristics of Foundation Vibrations</b>	
4.1	Introduction .....	125
4.2	Dynamic Stiffness and Compliance of Foundation.....	126

4.3	Vibration of a Massless Rigid Strip Foundation .....	128
4.3.1	Effect of bedrock depth ( $H/B$ ) .....	130
4.3.2	Effect of shear modulus ratio ( $G_1/G_2$ ) of soil layers .....	135
4.3.3	Effect of Poisson's ratio .....	138
4.3.4	Effect of material damping ratio .....	142
4.4	Vibration of Rails and Ground under Harmonic Loads .....	146
4.5	Applications to Practical Problems .....	150
4.5.1	Problem 1: Uniform half-space .....	153
4.5.2	Problem 2: Soil deposit resting on bedrock .....	155
4.6	Concluding Remarks .....	163
<b>5</b>	<b>Wave Barriers for Vibration Isolation of Foundations: Parametric Study</b>	
5.1	Introduction .....	165
5.2	Considerations in Parametric Studies .....	168
5.3	Vibration Isolation by Elastic Foundation .....	172
5.3.1	Young's modulus ratio ( $E_s/E_e$ ) .....	174
5.3.2	Mass density ratio ( $\rho_s/\rho_e$ ) .....	178
5.3.3	Poisson's ratios ( $\nu_e, \nu_s$ ) .....	178
5.3.4	Material damping ratio ( $\beta$ ) .....	180
5.3.5	Normalized dimensions ( $T, E$ ) .....	182
5.3.6	Bedrock depth $H$ .....	185
5.4	Vibration Isolation by Open Trenches .....	187
5.4.1	Distance $L$ between the railway and open trench .....	190
5.4.2	Depth $D$ and width $W$ of open trench .....	191
5.5	Vibration Isolation by In-Filled Trenches .....	192
5.5.1	Distance $L$ between the railway and in-filled trench .....	196
5.5.2	Material damping ratio $\beta$ .....	197
5.5.3	Shear modulus ratio ( $G_{sb}/G_{ss}$ ) .....	197
5.5.4	Mass density ratio ( $\rho_b/\rho_s$ ) .....	200
5.5.5	Poisson's ratios ( $\nu_b, \nu_s$ ) .....	201
5.5.6	Depth $D$ and width $W$ of in-filled trench .....	203
5.6	Effect of Frequencies of Traffic Loads .....	205
5.7	Concluding Remarks .....	206
<b>6</b>	<b>Vibration Reduction of Buildings Located Alongside Railways</b>	
6.1	Introduction .....	207
6.2	Problem Formulation and Basic Assumptions .....	211
6.3	Scheme for Generating Finite/Infinite Element Mesh .....	212
6.4	Parametric Studies for Open Trenches .....	214
6.4.1	Normalized distance $L$ from the structure .....	216
6.4.2	Normalized depth $D$ and width $W$ of trench .....	217

6.5	Parametric Studies for In-Filled Trenches.....	218
6.5.1	Normalized distance $L$ from the structure.....	218
6.5.2	Normalized depth $D$ and width $W$ of trench .....	219
6.5.3	Impedance ratio of in-filled trench .....	220
6.5.4	Poisson's ratios ( $\nu_b, \nu_s$ ).....	222
6.6	Effect of Frequencies and Soil Conditions.....	223
6.6.1	Soil with no bedrock.....	225
6.6.2	Soil with bedrock.....	227
6.7	Concluding Remarks .....	229
<b>7</b>	<b>2.5D Finite/Infinite Element Method</b>	
7.1	Introduction.....	231
7.2	Formulation of the Problem and Basic Assumptions .....	234
7.3	Procedure of Derivation for Finite/Infinite Elements.....	236
7.4	Wave Numbers for the Case with Moving Loads .....	239
7.5	Shape Functions of Infinite Element .....	244
7.6	Wave Propagation Properties for Different Vehicle Speeds .....	245
7.7	Selection of Element Size and Mesh Range.....	251
7.8	Selection of Wave Number $k'_i$ .....	253
7.9	Selection of Amplitude Decay Factor $\alpha$ of Displacement.....	254
7.10	Verification of the Present Approach.....	255
7.10.1	Response in frequency domain for moving loads at sub-, trans- and super-critical speeds .....	256
7.10.2	Response in frequency domain for moving loads with self oscillation.....	258
7.10.3	Effectiveness and accuracy of condensation procedure..	259
7.10.4	Responses in time domain for sub-critical speed case ....	262
7.10.5	Responses in time domain for trans-critical speed case..	266
7.11	Case Study.....	266
7.12	Concluding Remarks .....	271
<b>8</b>	<b>Ground Vibration Due to Moving Loads: Parametric Study</b>	
8.1	Introduction.....	277
8.2	Measurement of Vibration Attenuation for Soils .....	279
8.3	Problem Description and Element Meshes.....	280
8.4	Parametric Study for a Uniform Half-Space .....	289
8.4.1	Effect of shear wave speed .....	289
8.4.2	Effect of Poisson's ratio.....	289
8.4.3	Effect of damping ratio with no self oscillation.....	292
8.4.4	Effect of damping ratio for different oscillation frequencies.....	295

8.5	Parametric Study for Single Soil Layer Overlying a Bedrock ...	302
8.5.1	Effect of stratum depth for a quasi-static moving load ...	303
8.5.2	Effect of stratum depth for a moving load with self oscillation.....	309
8.5.3	Effect of self oscillation frequency.....	315
8.5.4	Effect of load-moving speed.....	319
8.6	Parametric Study for Multi Soil Layers .....	323
8.6.1	Effect of soil layers for a quasi-static moving load.....	324
8.6.2	Effect of soil layers for a moving load with self oscillation.....	327
8.6.3	Effect of load-moving speed for multi-layered soils.....	331
8.7	Concluding Remarks .....	336
<b>9</b>	<b>Wave Barriers for Reduction of Train-Induced Vibrations: Parametric Study</b>	
9.1	Introduction.....	339
9.2	Major Considerations in Parametric Studies .....	341
9.3	Vibration Reduction by Open Trenches .....	344
9.3.1	Moving loads with no self oscillation.....	344
9.3.1.1	Effect of load-moving speed.....	345
9.3.1.2	Effect of trench depth.....	351
9.3.1.3	Effect of trench width .....	353
9.3.2	Moving loads with self oscillation.....	355
9.4	Vibration Reduction by In-Filled Trenches.....	360
9.4.1	Moving loads with no self oscillation.....	360
9.4.1.1	Effect of load-moving speed.....	360
9.4.1.2	Effect of trench depth.....	364
9.4.1.3	Effect of trench width .....	368
9.4.1.4	Effect of shear wave speed of trenches .....	369
9.4.2	Moving loads with self oscillation.....	375
9.5	Vibration Reduction by Wave Impeding Block .....	379
9.5.1	Moving loads with no self oscillation.....	379
9.5.1.1	Effect of load-moving speed.....	379
9.5.1.2	Effect of depth of WIB .....	387
9.5.1.3	Effect of thickness of WIB .....	388
9.5.1.4	Effect of shear wave speed of WIB .....	390
9.5.2	Moving loads with self oscillation.....	392
9.6	Comparison and Discussion .....	398
9.7	Concluding Remarks .....	404
<b>10</b>	<b>Soil Vibrations Caused by Underground Moving Trains</b>	
10.1	Introduction.....	407

10.2 Problem Formulation and Basic Assumptions .....	409
10.3 Formulation of 2.5D Finite/Infinite Element Method .....	412
10.4 Verification of the Present Approach .....	414
10.5 Numerical Modeling and Related Considerations .....	418
10.6 Parametric Study for an Underground Moving Train .....	424
10.6.1 Effect of number of carriages .....	424
10.6.2 Effect of load-moving speed .....	426
10.6.3 Effect of bedrock depth $H$ .....	433
10.6.4 Effect of damping ratio .....	435
10.6.5 Effect of tunnel lining thickness .....	440
10.6.6 Effect of tunnel depth .....	444
10.7 Concluding Remarks .....	448
<b>Appendix Steady-State Response in Finite Integrals</b>	
<b>by Eason (1965) .....</b>	<b>451</b>
