Preface	v
PART I: THEORY	
1. Introduction	3
1.1 General	3
1.2 Complete Synchronization	5
1.3 Imperfect Complete Synchronization	5
1.4 Generalized Synchronization	6
2. Classification of Couplings	8
2.1 Negative Feedback	8
2.1.1 Linear and nonlinear coupling	9
2.1.2 Mutual and unidirectional coupling	10
2.1.3 Diffusive, global and hybrid coupling	11
2.1.4 Real and imaginary coupling	13
2.1.4.1 Real coupling	14
2.1.4.2 Imaginary coupling	14
2.1.5 Diagonal and non-diagonal coupling	15
2.1.6 Dissipative, conservative and inertial coupling	16
2.2 Drive with a Common Signal	18
2.3 Autonomous Driver Decomposition	20
2.4 Active–passive Decomposition	21
3. Determination of Complete Synchronization Thresholds	23
3.1 Stability of the Synchronous State	23
3.2 Analytical Approaches for Diagonally Coupled Systems	25
3.2.1 Two oscillators	27

3.2.2	Networks of coupled oscillators — diagonal synchronization stability matrix	30
3.2.2.1	Continuous-time systems	31
3.2.2.2	Discrete-time systems	33
3.3	Arbitrary Linking Function	34
3.3.1	Master stability function	36
3.3.1.1	The MSF for continuous-time systems	36
3.3.1.2	The MSF for maps	39
3.3.1.3	Three or two oscillators probe	41
3.3.2	Graph methods	44
3.3.3	Conditional and response Lyapunov exponents	47
3.3.3.1	Decomposed systems	48
3.3.3.2	Externally driven oscillators	49
4.	Synchronizability of Coupled Oscillators	52
4.1	Single Synchronous Ranges of the Coupling Parameter	52
4.1.1	Diagonally coupled systems	52
4.1.1.1	Regular coupling configuration	53
4.1.1.2	Random coupling configuration	61
4.1.2	Oscillators with the PD and ND coupling	66
4.1.2.1	Bottom-limited synchronizability	68
4.1.2.2	Double-limited synchronous interval	72
4.1.2.3	Effectiveness of the PD coupling	74
4.2	Ragged Synchronizability	77
4.2.1	Disconnected synchronous intervals	78
4.2.2	Experimental observation of disconnected synchronous ranges. Influence of a parameter mismatch	88
4.2.3	Designing the ragged synchronizability	94
4.3	Commonly Driven Oscillators	97
4.3.1	Master-slave coupling of identical systems	97
4.3.2	Non-identical drive–response systems	102
4.3.2.1	Array of driven mechanical oscillators	103
4.3.2.2	Driven Henon maps	111

PART II: APPLICATION

5.	Lyapunov Exponents: Idea and Calculation	117
5.1	Stability Criteria of Dynamical Systems	118

5.2	General Concept of Lyapunov Exponents	119
5.3	Calculation of Lyapunov Exponents	127
5.3.1	Classical algorithms	128
5.3.2	Evaluation of the Lyapunov exponents from the time series	130
5.3.3	Methods for non-differentiable systems	133
6.	Determination of the LLE Using the Complete Synchronization	139
6.1	Theoretical Background for the Estimation Procedure	139
6.1.1	Continuous-time systems	140
6.1.2	Maps	142
6.2	Numerical Implementation	147
6.2.1	Variants of the method	147
6.2.2	Procedures improving the effectiveness of the method	147
6.3	Estimation of the Largest RLE	153
6.4	Effective Lyapunov Exponents	155
7.	Applications of the Synchronization Method for the LLE Estimation	158
7.1	Discrete-time Systems of Known Difference Equations	159
7.2	Mechanical Systems with Discontinuities	162
7.2.1	1-DoF impact oscillator	162
7.2.2	1-DoF stick-slip oscillator	167
7.2.3	2-DoF mechanical oscillator with impacts and friction	173
7.2.4	3-DoF impact absorber of vibration	177
7.3	Systems with Time Delay	181
7.3.1	Henon map with time delay	183
7.3.2	Van der Pol oscillator with time delay	184
7.4	Effective Lyapunov Exponents	189
7.4.1	ELE estimation	189
7.4.2	Determining the ERLE	194
7.5	Comparison of the Obtained Results	197
	Bibliography	203
	Index	211
