

Contents

<i>Preface</i>	v
The Standard Model and LHC Phenomenology	1
1. Introduction to the Standard Model and Electroweak Physics <i>P. Langacker</i>	3
2. Topics in Flavor Physics <i>K.S. Babu</i>	49
3. LHC Phenomenology for Physics Hunters <i>T. Plehn</i>	125
4. Collider Signal I : Resonance <i>T.M.P. Tait</i>	181
5. Collider Signal II: Missing E_T Signatures and Dark Matter Connection <i>H. Baer</i>	211
LHC Experimentation	259
6. A Short Guide to Accelerators, Detectors, Objects, and Searches	261

	<i>P. Wittich</i>	
7.	Dealing with Data: Signals, Backgrounds, and Statistics	305
	<i>L. Demortier</i>	
	Advanced Theoretical Topics	357
8.	Introduction to SUSY and SUSY Breaking	359
	<i>Y. Shirman</i>	
9.	Strings for Particle Physicists	423
	<i>G. Shiu</i>	
10.	Particle Physics in Extra Dimensions	495
	<i>B. Dobrescu</i>	
	Neutrino Physics, Astroparticle Physics, and Cosmology	525
11.	Neutrinos: Theory	527
	<i>M.C. Gonzalez-Garcia</i>	
12.	Experimentation of Neutrino Physics	565
	<i>K. Scholberg</i>	
13.	Inflationary Cosmology	623
	<i>W. H. Kinney</i>	
14.	Particle Dark Matter	709
	<i>Dan Hooper</i>
