<i>Preface</i>	vii
<i>Acknowledgements</i>	ix
<i>Glossary of Symbols and Abbreviations</i>	xi
1. Introduction	1
1.1 Matrix orders	1
1.2 Parallel sum and shorted operator	3
1.3 A tour through the rest of the monograph	4
2. Matrix Decompositions and Generalized Inverses	9
2.1 Introduction	9
2.2 Matrix decompositions	10
2.3 Generalized inverse of a matrix	17
2.4 The group inverse	26
2.5 Moore-Penrose inverse	36
2.6 Generalized inverses of modified matrices	46
2.7 Simultaneous diagonalization	55
2.8 Exercises	64
3. The Minus Order	67
3.1 Introduction	67
3.2 Space pre-order	68
3.3 Minus order - Some characterizations	72
3.4 Matrices above/below a given matrix under the minus order	81

3.5	Subclass of g-inverses \mathbf{A}^- of \mathbf{A} such that $\mathbf{A}^- \mathbf{A} = \mathbf{A}^- \mathbf{B}$ and $\mathbf{A} \mathbf{A}^- = \mathbf{B} \mathbf{A}^-$ when $\mathbf{A} <^- \mathbf{B}$	84
3.6	Minus order for idempotent matrices	93
3.7	Minus order for complex matrices	95
3.8	Exercises	98
4.	The Sharp Order	103
4.1	Introduction	103
4.2	Sharp order - Characteristic properties	104
4.3	Sharp order - Other properties	110
4.4	Drazin order and an extension	117
4.5	Exercises	124
5.	The Star Order	127
5.1	Introduction	127
5.2	Star order - Characteristic properties	128
5.3	Subclasses of g-inverses for which $\mathbf{A} <^* \mathbf{B}$	136
5.4	Star order for special subclasses of matrices	138
5.5	Star order and idempotent matrices	145
5.6	Fisher-Cochran type theorems	150
5.7	Exercises	152
6.	One-Sided Orders	155
6.1	Introduction	155
6.2	The condition $\mathbf{A} \mathbf{A}^- = \mathbf{B} \mathbf{A}^-$	156
6.3	One-sided sharp order	160
6.4	Roles of $\mathbf{A}_{\mathbf{c}}^-$ and $\mathbf{A}_{\mathbf{a}}^-$ in one-sided sharp order	167
6.5	One-sided star order	171
6.6	Exercises	180
7.	Unified Theory of Matrix Partial Orders through Generalized Inverses	183
7.1	Introduction	183
7.2	\mathcal{G} -based order relations: Definitions and preliminaries	184
7.3	\mathcal{O} -based order relations and their properties	195
7.4	One-sided \mathcal{G} -based order relations	200
7.5	Properties of \mathcal{G} -based order relations	203

7.6	On \mathcal{G} -based extensions	208
7.7	Exercises	212
8.	The Löwner Order	215
8.1	Introduction	215
8.2	Definition and basic properties	215
8.3	Löwner order on powers and its relation with other partial orders	226
8.4	Löwner order on generalized inverses	230
8.5	Generalizations of the Löwner order	238
8.6	Exercises	243
9.	Parallel Sums	245
9.1	Introduction	245
9.2	Definition and properties	246
9.3	Parallel sums and partial orders	259
9.4	Continuity and index of parallel sums	264
9.5	Exercises	270
10.	Schur Complements and Shorted Operators	273
10.1	Introduction	273
10.2	Shorted operator - A motivation	274
10.3	Generalized Schur complement and shorted operator	276
10.4	Shorted operator via parallel sums	283
10.5	Generalized Schur complement and shorted operator of a matrix over general field	285
10.6	Exercises	293
11.	Shorted Operators - Other Approaches	295
11.1	Introduction	295
11.2	Shorted operator as the limit of parallel sums - General matrices	296
11.3	Rank minimization problem and shorted operator	305
11.4	Computation of shorted operator	310
11.5	Exercises	315
12.	Lattice Properties of Partial Orders	317
12.1	Introduction	317

12.2	Supremum and infimum of a pair of matrices under the minus order	318
12.3	Supremum and infimum under the star order	330
12.4	Infimum under the sharp order	338
12.5	Exercises	342
13.	Partial Orders of Modified Matrices	343
13.1	Introduction	343
13.2	Space pre-order	344
13.3	Minus order	352
13.4	Sharp order	357
13.5	Star order	364
13.6	Löwner order	367
14.	Equivalence Relations on Generalized and Outer Inverses	371
14.1	Introduction	371
14.2	Equivalence relation on g-inverses of a matrix	372
14.3	Equivalence relations on subclasses of g-inverses	380
14.4	Equivalence relation on the outer inverses of a matrix	384
14.5	Diagrammatic representation of the g-inverses and outer inverses	390
14.6	The Ladder	401
15.	Applications	407
15.1	Introduction	407
15.2	Point estimation in a general linear model	407
15.3	Comparison of models when model matrices are related under matrix partial orders	411
15.4	Shorted operators - Applications	415
15.5	Application of parallel sum and shorted operator to testing in linear models	418
15.6	Shorted operator adjustment for modification of network or mechanism	418
16.	Some Open Problems	423
16.1	Simultaneous diagonalization	423
16.2	Matrices below a given matrix under sharp order	424
16.3	Partial order combining the minus and sharp orders	424

16.4	When is a \mathcal{G} -based order relation a partial order?	425
16.5	Parallel sum and g-inverses	425
16.6	Shorted operator and a maximization problem	426
16.7	The ladder problem	427
Appendix A Relations and Partial Orders		429
A.1	Introduction	429
A.2	Relations	429
A.3	Semi-groups and groups	432
A.4	Semi-groups and partial orders	433
A.5	Involution	435
A.6	Compatibility of partial orders with algebraic operations .	435
A.7	Partial orders induced by convex cones	436
A.8	Creating new partial orders from old partial orders	436
<i>Bibliography</i>		439
<i>Index</i>		445
