

# Contents

Dedication	v
Preface	vii
1. Demise of the Big Bang - A Philosophical Conundrum	1
1.1 Philosophical Overview	2
1.2 A New Cosmological Horizon	8
References	11
2. Extending the Standard Model: Towards the Ultimate Evolution of String Theory	13
2.1 Pre-Ambulatory Hoopla	14
2.2 Ultimate Evolution of M-Theory	19
2.3 String/Brane Dynamics	21
2.4 New Horizons Beyond the Standard Model	24
References	26
3. Fundamental Parameters for a Continuous-State Holographic Anthropic Multiverse	29
3.1 Introduction to the Cosmological Issues	29
3.2 Clarification of Pertinent Cosmological Nomenclature	32
3.3 Parallel Interpretations of Cosmological Data	36
3.4 Euclidean/Minkowski Geometry as Basis for Observed Reality	37
3.5 Philosophy of Space in HAM Cosmology - Origin of Structure	40
3.6 Space: Relational Versus Absolute	41
3.7 Physical Cosmology of Fundamental Least Cosmological Unit	46
3.8 Holographic Anthropic Multiverse Cosmology (HAM)	50
3.9 Overview of the Formalism for Noetic Cosmology	52
3.10 Transformation of Space into Time	56
3.11 Energy Dependent Spacetime Metric	56
3.12 The Wheeler Geon Concept Extended to Noetic Superspace	57

3.13	The Hyper-Geon Domain of HAM Noetic Field Theory . . . . .	58
3.14	Conclusions. . . . .	59
	References. . . . .	60
4.	An Alternative Derivation of String Tension Determining a Unique Background Independent String Vacuum . . . . .	64
4.1	Introductory Prolegomena . . . . .	64
4.2	Scaling in Cosmology and the Continuous-State Postulate . . . . .	68
4.3	Fine Tuning Implied by Astrophysical Observation . . . . .	69
4.4	Numerical Relations Coupled to the Concept of Scaling . . . . .	72
4.5	Physical Cosmology of the Close-Packed Fundamental Least Unit for an Energy Dependent Spacetime Metric . . . . .	79
4.6	The Formalism for Noetic HAM Cosmology . . . . .	81
4.7	Transformation of Space into Time and String Tension. . . . .	82
4.8	Alternative Derivation of String Tension in HAM Cosmology. . . . .	85
4.9	Parameters of the Spacetime Incurive Oscillator (IO). . . . .	88
4.10	Emergence of 2-Branes from Inherent Spacetime Oscillations. . . . .	92
4.11	Summary of Noetic Spacetime Parameters. . . . .	93
4.12	Simplistic Computer Simulated Production of the 2-Brane. . . . .	95
4.13	Conclusions. . . . .	96
	References. . . . .	97
5.	Formalizing the Ultimate Geometry of Reality: Dimensionality, Awareness and Arrow of Time . . . . .	103
5.1	Introduction. . . . .	104
5.2	Current Philosophy of Temporal Science . . . . .	105
5.3	Complementarity of Physical Time and Observer Time . . . . .	107
5.4	The Vacuum Origin of Thermodynamics and Entropy . . . . .	115
5.5	Peripheral Physical Properties Related to the Observer . . . . .	117
5.6	Introduction to Spin Exchange Compactification Dynamics and the Permutation of Dimensions in the Noetic Transformation . . . . .	118
5.7	Dirac Spherical Rotation Inherent to the Transformation of the Fundamental Least-Unit . . . . .	122
5.8	Preparing the Noetic Spacetime Transformation . . . . .	126
5.9	Developing the Line Element for Noetic Superspace . . . . .	128
5.10	Formalizing the Noetic Group of Transformations . . . . .	129
5.11	Final Remarks . . . . .	144
	References . . . . .	146

6. Integration of Gravity & Electromagnetism in Terms of a Dirac Polarized Vacuum	151
6.1 Introduction to Fixing the G/EM Framework	151
6.2 Flat Spacetime and a Real Physical Aether	154
6.3 General Relativity Represented as a Polarizable Vacuum	159
6.4 Maxwell's Equations Extended	162
6.4.1 The Infinitesimal Mass of Photons	163
6.4.2 Divergence of the Electromagnetic Field	164
6.5 Possible New Consequences of the Model	165
6.6 Extending Newton's Model with Inertia and Vacuum Drag	168
6.7 Relativistic Maxwell's Equations in Complex Form	171
6.7.1 Relativistic conditions on Maxwell's equations in complex geometries and the invariance of the line element	171
6.7.2 Complex E & B in real 4-space & the complex Lorentz condition	182
6.7.3 Complex EM forces in a gravitational field	185
6.8 Summation and Conclusions	190
References	191
7. Redshift/CMBR as Intrinsic Blackbody Cavity-QED Absorption/Emission Equilibrium Dynamics	195
7.1 Introductory Cosmological Parameters	195
7.2 Origin of Redshift in Nonzero Restmass Photon Anisotropy in Photon Propagation and the Vigier Tired-Light Hypothesis	203
7.3 Weak-Field Gravitational Approach of a Finite Light-Pencil and Derivation of the Gravitational Field of Radiation	206
7.4 Gravitational Action of a Light Pencil	208
7.5 Internal Motion Structure of the Photon	209
7.6 Introduction to Spin Exchange Compactification Dynamics	211
7.7 Blackbody Exciplex Radiation-Cosmological Constraints	214
7.8 Blackbody Microcavity-QED Constraints	217
7.9 CMBR Energy Damping by Vacuum Conductivity	217
7.10 Possible Black Hole Considerations for Discussion	219
7.11 Size Temperature Relationship of Kerr Black Holes	220
7.12 Temperature Relationship of Dirac QED Cavity 'Black Holes'	221
7.13 Spin Exchange Parameters of Spacetime-Photon Coupling	223
7.14 Spontaneous CMBR Emission by Spacetime Cavity-QED	224
7.15 Possibility of Blackbody Emission from Continuous Spacetime Compactification	227
7.16 New Background Conditions of the Dirac Vacuum	231
7.17 Deriving the Topological Action Principle for CMBR Emission	236

7.18	A Putative Model of Exciplex Proton Nucleosynthesis .....	239
7.19	Summary and Conclusions .....	240
	References .....	242
8.	Implications of Multidimensional Geometries and Measurement	249
8.1	Introduction .....	249
8.2	Complexified EM Fields in Local and Nonlocal Minkowski Space	251
8.3	Complex Minkowski Space: Implications for Physics .....	254
8.4	Complex Vector and Advanced Potentials and Bell's Inequality. . .	256
8.5	Superluminal Vector and Scalar Potential Transformation Laws . . .	263
8.6	Insights into Dirac and Penrose Spinor Calculus .....	270
8.7	Conclusions .....	280
	References .....	280
9.	Probability $\equiv 1$ : An Empirical Protocol for Surmounting Quantum Uncertainty	283
9.1	Introduction – Philosophy of Phenomenology Versus Ontology . . .	284
9.2	The Proper Cosmological Perspective is Key .....	288
9.3	Micromagnetics of Spacetime Conformation .....	291
9.4	Catastrophe Theory and the Noetic Formalism .....	295
9.5	Protocol for Experimentally Testing Noetic Cosmology .....	300
9.6	Introduction to the $P \equiv 1$ Experimental Design .....	304
9.7	Conclusions .....	315
	References .....	317
10.	On the Possibility of Relativistic Shock-Wave Effects in Observations of Quasar Luminosity	326
10.1	The Quasar Redshift-Distance Interpretation Controversy .....	326
10.2	QSOs an Issue of the Fundamental Basis of Geometrodynamics	328
10.3	Recent Refinements of the Titius-Bode Series as an Indicator of a Possible New Gravitational Dynamic .....	330
10.4	Critique of Hubble's Law as Applied to Doppler Expansion . . .	332
10.5	The Observer and the Cosmological Principle .....	333
10.6	Some Fundamental Insights on Shock Waves .....	334
10.7	New Cosmological Gravitational Shock Parameters .....	337
10.8	Hypersonic Shock Waves .....	338
10.9	Gravitational Shock Waves .....	342
10.10	Conclusions .....	344
	References .....	344

11. The Bulk Implementation of Universal Scalable Quantum Computing	351
11.1 Introduction – Basics of Quantum Computing	352
11.2 Overview of New Fundamental Parameters	353
11.3 The Causal Separation of Phenomenology from Ontology	354
11.4 Review of Angular Momentum and Pauli-Dirac Spin Matrices	356
11.5 Noumenal Reality Versus Phenomenology of Quantum Theory	359
11.6 Justification for the Incurive Noetic Model	361
11.7 Essential Properties of Complex Noetic 12 Space	363
11.8 Geometric Introduction to the Noetic QC Ontology	378
11.9 Microphysical Computation Limits: Case of Relativistic Qubits	383
11.10 Essential Parameters of the Incurive Oscillator	384
11.11 Ontological I/O by Superceding Quantum Uncertainty	387
11.12 A Twistor Approach to the UQC I/O Ontology	390
11.13 Class II Mesoionic Xanthines as Potential 10-Qubit Quantum Computer Substrate Registers	393
11.14 Initialization of Mesoionic Xanthine Registers	396
11.15 Conclusions	405
References	406
12. Practical Matter-Wave Antiballistic Defense Shield Technologies	413
12.1 Introduction – Current Status of Shield Technology	414
12.2 Overview of New Theoretical and Physical Requirements	415
12.3 Critical Philosophical Considerations on the Limits of Potentia	421
12.4 The Shield Vacuum	423
12.5 What are the Required Vacuum Parameters?	425
12.6 Domain Wall Boundary Conditions and Emission Absorption Loci for Advanced-Retarded Waves	431
12.7 Energy Increase from Ising Model Lattice-Gas Properties	434
12.8 Programming Matter Through Cellular Automata	436
12.9 Introduction to de Broglie Matter-Waves	437
12.10 Coherent Control of Standing Matter-Waves	439
12.11 Afterward	441
12.12 Summary of the Defense Shield Design Parameters	442
Acknowledgement	443
References	444
13. Is a Different Search Protocol Required for Success in SETI Research?	449
13.1 On the Horns of a Dilemma	449
13.2 SETI Epistemology from the Anthropic Perspective	451

13.3	The Drake Equation .....	454
13.4	Brief Review of Anthropic Multiverse Parameters .....	455
13.5	Does SETI Require a Different Strategy for Success? .....	456
13.6	Theological Arguments – Adam given his Reckoning versus the Cosmological Age of the Earth .....	458
13.7	Seemingly Far-Out Absurd Pseudo-Scientific Arguments .....	461
13.8	The Anthropic Principle (AP) .....	464
13.9	Calculations for a Holographic Anthropic Multiverse .....	466
13.10	Wave Function of the Universe (WFU) .....	468
13.11	Subtractive Interferometry .....	469
13.12	New SETI Technology - The Interdimensional Q-Telescope ...	470
13.13	Conclusions Contusions and Cowardice .....	473
	References .....	474
