The Authors	v
Preface	vii
Overview	xix
1. Introduction to the Theory of Water Memory and General Principles of Water Activation	1
1.1. Water Structure and the Paradoxes of Water Memory	1
1.2. The Clathrate Model and a Water Memory Cell	11
1.3. Program, Equipment, and Research Techniques for the Investigation of Activated Water	30
2. Molecular Resonance Effect Technology as the Basic Method for Activation of Liquid Substances	36
2.1. Introduction to the Theory of Fractal Matrix	36
2.2. The Fractal Matrix Characteristics of MRET Polymer Material	39
2.2.1. Results and discussions	45
2.3. Method and Device for the Production of Activated Liquids	47
2.3.1. Testing of device for production of activated liquids	49
3. Study of the Physical Properties of MRET Activated Water	61
3.1. Methods and Equipment to Study the Dielectric Permittivity and the Conductivity of Activated Water	61
3.2. Anomalous Electrodynamical Characteristics of Activated Water	66
3.3. Procedure and Results of the Measurement of the Viscosity of Activated Water	91
3.4. Influence of the Activation of Water on Hydrogen Index pH	99

4.	Influence of MRET Activated Water on the Growth of Higher Plants	104
4.1.	General Principles and Methods of the Study of the Influence of Activated Water on Plants	104
4.2.	Influence of MRET Activated Water on the Germination of Seeds of Vegetable Crops	108
4.3.	Influence of MRET Activated Water on the Growth of Stalk and Leaves of Vegetable Crops	112
4.3.1.	Radish “Red giant”	116
4.3.2.	Radish “Krasa rannyaya”	118
4.3.3.	Peas “Alpha”	121
4.3.4.	String beans “Valentino”	121
4.3.5.	Cabbage “Dymerskaya”	125
4.3.6.	Pumpkin “Zhdana”	126
4.4.	Influence of MRET Activated Water on the Growth of Plants in a Sterile Cultural Medium	131
4.5.	Feature and Paradoxes of the Influence of Activated Water on Shaping and Growth of Callus Tissue	135
5.	Effects of MRET Activated Water on Microbial Culture and Natural Microbial Associations	148
5.1.	The Problem and Methods of Studying the Influence of Activated Water on Microbial Cultures and Microbial Associations	148
5.1.1.	General statement of the problem and initial biological test-objects	148
5.1.2.	Methods of microbiological studies and equipment	149
5.1.3.	Method of activation of nutrient media and means of registration of the processes of vital activity of microbiological cultures	152
5.2.	Effect of the Activation of the Aqueous Medium on Metabolic Parameters of the Microbiological Culture <i>Escherichia coli</i>	158
5.2.1.	Effect of the duration of activation on the metabolic parameters of culture <i>Escherichia coli</i> grown under aerobic conditions	158

5.2.2.	Metabolic parameters of <i>Escherichia coli</i> on its growth in the activated water-containing nutrient medium under anaerobic conditions	165
5.3.	Cultural-Physiological Parameters of <i>Escherichia coli</i> Culture Grown on the Activated Meat-Peptide Agar Under Aerobic Conditions	182
5.3.1.	Effect of different fractions of activated water on the survivability of cells and the growth of colonies on meat-peptide agar under aerobic conditions	182
5.3.2.	Peculiarities of the morphology and division of cells of <i>Escherichia coli</i> in activated meat-peptide agar under aerobic conditions	193
5.4.	Influence of Activated Water on the Stability of the Microbiological Culture <i>Escherichia coli</i> to the Action of Antibiotics Under Aerobic Conditions . .	196
5.5.	Effect of the Nutrient Medium Activation on the Metabolic Parameters of Microbial Associations . .	202
6.	Examination of the Influence of MRET Activated Water on Prophylaxis and Treatment of Oncology	217
6.1.	Procedures of Examinations of the Influence of Activated Water on Oncology, Objects of Investigation, and Facilities	217
6.2.	Study of the Antitumor Effects of Different Fractions of MRET Activated Water <i>in vivo</i> in the Modes of Prophylactic and Therapeutic Treatment Tested on the Tumor Model of Ascitic <i>Ehrlich carcinoma</i>	222
6.2.1.	Materials, methods, and experimental results	222
6.2.2.	Results and discussion	228
6.3.	Study of Antitumor Effects of the Application of Activated Water on the Experimental Tumor Model of Ascitic <i>Sarcoma 37</i>	233
6.3.1.	Materials and methods	233
6.3.2.	Results and discussion	241
6.4.	Research of the Influence of Activated Water on the Cytotoxic Activity of Murine Lymphocytes	243

7.	Effect of MRET Activated Water on Staphylococcal Infection <i>in vivo</i> in Animal Model (on the Cells of Immune System) and <i>in vitro</i> on the Culture of <i>Staphylococcus aureus</i> Wood-46	252
7.1.	Immune Response and the Purpose of Investigation	252
7.2.	Functional Activity of Cells of the Immune System of Mice Infected with Staphylococcal Culture Following Preventive Consumption of MRET Water	254
7.2.1.	The methodology of investigation	254
7.2.2.	The examination of functional activity of cells of the phagocytic system	256
7.2.3.	Statistical calculations	258
7.3.	Results and Discussion	259
7.3.1.	The effect of MRET water on the development of the local acute inflammation	259
7.3.2.	The effect of activated water on the death rate of animals in the case of intra-peritoneal staphylococcal infection	260
7.3.3.	The preliminary examination of the effect of activated water on staphylococcal infected mice	260
7.3.4.	The effect of activated water on the cellularity and the weight of lymphoid organs	261
7.3.5.	The effect of activated water on functional activity of cells of the phagocytic system	263
7.3.6.	Conclusions to the section	274
7.4.	The Effect of MRET Activation on the Process of Growth of Staphylococcal Culture in Nutrient Medium	277
7.4.1.	Materials and methods of examinations	277
7.4.2.	Results and discussion	278
7.4.3.	Conclusions to the section	280
8.	The Possible Mechanisms of Effects of Activated Water on Biological Systems	284
8.1.	General Regularities of the Action of MRET Activated Water on Biological Objects	284

8.2. Possible Superficial Viscosity-Based Mechanism of the Influence of MRET Activated Water on the Division of Cells	286
8.3. Electrodynamic Dispersive and Viscosity-Related Mechanical Principles of the Influence of Activated Water on the Vital Activity of Biological Objects	294
9. Conclusions and Recommendations	300
