

# Contents

Preface	vii
1 How Did Schrödinger Get His Equation?	1
2 Heisenberg's Matrix Mechanics and Dirac's Re-creation of it	11
3 Dirac's Derivation of the Quantum Conditions	17
4 The Equivalence between Matrix Mechanics and Wave Mechanics	21
5 The Dirac Delta Function	27
6 Why Do We Need Hilbert Space?	33
7 The Dirac Bra Ket Notation and the Riesz Theorem	37
8 Self-Adjoint Operators in Hilbert Space	45
9 The Spectral Theorem, Discrete and Continuous Spectra	53
10 Coordinate and Momentum Representations of Quantum States, Fourier Transforms	59
11 The Uncertainty Principle	63
12 Commutator Algebra	73
13 Ehrenfest's Theorem	77
14 The Simple Harmonic Oscillator	81
15 Complete Set of Commuting Observables	95
16 Solving Schrödinger's Equation	99

17	Symmetry, Invariance, and Conservation in Quantum Mechanics	113
18	Why is Group Theory Useful in Quantum Mechanics?	125
19	$SO(3)$ and $SU(2)$	131
20	The Spectrum of the Angular Momentum Operators	145
21	Whence the Spherical Harmonics?	151
22	Irreducible Representations of $SU(2)$ and $SO(3)$ , Rotation Matrices	159
23	Direct Product Representations, Clebsch-Gordon Coefficients	169
24	Transformations of Wave Functions and Vector Operators under $SO(3)$	173
25	Irreducible Tensor Operators and the Wigner-Eckart Theorem	179
26	Reduction of Direct Product Representations of $SO(3)$ : The Addition of Angular Momenta	183
27	The Calculation of Clebsch-Gordon Coefficients: The $3-j$ Symbols	189
28	Applications of the Wigner-Eckart Theorem	199
29	The Symmetric Groups	209
30	The Lie Algebra of $SO(4)$ and the Hydrogen Atom	233
31	Stationary Perturbations	243
32	The Fine Structure of Hydrogen: Application of Degenerate Perturbation Theory	255
33	Time-Dependent Perturbation Theory	263
34	Interaction of Matter with the Classical Radiation Field: Application of Time-Dependent Perturbation Theory	275
35	Potential Scattering Theory	285
36	Analytic Properties of the $S$ -Matrix: Bound States and Resonances	307

<b>37</b>	<b>Non-Perturbative Bound-State and Scattering-State Solutions: Radiation-Induced Bound-Continuum Interactions</b>	<b>317</b>
<b>38</b>	<b>Geometric Phases: The Aharonov-Bohm Effect and the Magnetic Monopole</b>	<b>333</b>
<b>39</b>	<b>The Berry Phase in Molecular Dynamics</b>	<b>339</b>
<b>40</b>	<b>The Dynamic Phase: Riemann Surfaces in the Semiclassical Theory of Non-Adiabatic Collisions; Homotopy and Homology</b>	<b>349</b>
<b>41</b>	<b>“The Connection is the Gauge Field and the Curvature is the Force”: Some Differential Geometry</b>	<b>367</b>
<b>42</b>	<b>Topological Quantum (Chern) Numbers: The Integer Quantum Hall Effect</b>	<b>385</b>
<b>43</b>	<b>de Rham Cohomology and Chern Classes: Some More Differential Geometry</b>	<b>405</b>
<b>44</b>	<b>Chern-Simons Forms: The Fractional Quantum Hall Effect, Anyons and Knots</b>	<b>413</b>
	<b>References</b>	<b>429</b>
	<b>Index</b>	<b>433</b>
