<i>Preface</i>	ix
1. Ray and Wave Propagation	1
1.1 Underwater Sound Channel	2
1.2 Basic Equations	5
1.2.1 Helmholtz equation	7
1.2.2 Parabolic equation	8
1.3 Geometrical Optics Approximations and Optical-Mechanical Analogy. The Hamiltonian Formalism	10
1.3.1 Eikonal and transport equations	11
1.3.2 Momentum-position variables	12
1.3.3 Action-angle variables in a range-independent waveguide	15
1.3.4 Action-angle variables in a range-dependent waveguide	19
1.3.5 Geometrical optics for the Helmholtz equation	22
1.4 Ray Travel Times	26
1.4.1 Timefront	27
1.4.2 Travel time as a function of starting momentum	33
1.5 Range-Dependent Environments	36
1.5.1 Internal waves	37
1.5.2 Rossby waves	40
1.5.3 Currents	41
1.5.4 Eddies	41
1.6 Acoustic Ocean Tomography	42
1.7 Experiments on Long-Range Sound Propagation	45
1.7.1 The Heard Island Feasibility Test	45

1.7.2	Experiments with bottom-mounted sources	51
1.7.3	Acoustic Engineering Test	57
1.7.4	Alternate Source Test	60
1.7.5	Acoustic Thermometry of Ocean Climate	63
1.8	Summary	65
2.	Ray Chaos	67
2.1	Hamiltonian Chaos	67
2.1.1	Dynamics of Hamiltonian systems	68
2.1.2	Statistical description of Hamiltonian chaos	72
2.2	Lyapunov Instability	78
2.3	Ray-Medium Resonance	83
2.4	Overlapping of Resonances	87
2.5	Vertical Resonance	98
2.5.1	Adiabatic approximation	100
2.5.2	Passage through a resonance	105
2.5.3	Vertical resonance versus ray-medium resonance	107
2.5.4	Resonance-induced chaotic layer	112
2.5.5	Influence of vertical resonance on a timefront of a received pulse	117
2.6	Manifestation of Regular and Chaotic Ray Motion in Distributions of Ray Travel Times	119
2.6.1	Perturbed waveguide	119
2.6.2	Timefront	122
2.6.3	Amplitude of a pulse signal in plane “travel time–depth”	125
2.6.4	Gap between travel times of chaotic and regular rays	126
2.6.5	“Focusing” of ray travel times	130
2.6.6	Role of stickiness and chaotic jets in “focusing” of ray travel times	132
2.6.7	Smoothed intensity of pulse signal	134
2.7	Summary	136
3.	Wave Chaos	139
3.1	The Problem of Wave Chaos	140
3.1.1	Ehrenfest time	141
3.1.2	Semiclassical propagator	142

3.1.3	Fidelity or overlap of wave fields	145
3.1.4	Dynamical localization	147
3.2	Normal Modes	150
3.2.1	Range-independent waveguide	150
3.2.2	Range-dependent waveguide	158
3.2.3	Normal modes corresponding to the Helmholtz equation	160
3.2.4	Ray-based description of mode amplitudes	163
3.2.5	Floquet modes of a periodic waveguide	168
3.3	Mode Coupling Under Chaotic Conditions	170
3.3.1	Spatial mode-medium resonance	171
3.3.2	Mode medium resonance and Floquet modes	177
3.3.3	Manifestations of stable islands and chaotic sea in structures of the Floquet modes	181
3.3.4	Scarring	186
3.4	Influence of Fine-Scale Inhomogeneities on Wave Dynamics	193
3.4.1	Introductory remarks	193
3.4.2	Mode coupling in the presence of a fine structure	194
3.4.3	Influence of vertical oscillations of a sound-speed perturbation on Floquet modes	198
3.5	Summary	214
4.	Chaotic Phenomena in Random Environment	217
4.1	Ray Chaos in a Random Medium	217
4.1.1	Statistical description of chaotic ray dynamics	218
4.1.2	Environmental model	220
4.1.3	Fokker-Planck equation for action	222
4.1.4	Evaluation of diffusivity B	225
4.1.5	Wiener process approximation	227
4.1.6	Probability density functions of ray parameters	232
4.1.7	Coarse-grained Wigner function	237
4.1.8	Specific Poincaré map for a randomly- inhomogeneous waveguide	241
4.2	Travel Times of Chaotic Rays	251
4.2.1	Timefront in a randomly inhomogeneous waveguide	251
4.2.2	Travel time differences	254
4.2.3	Statistics of ray travel times	259

4.3	Modal Structure of the Sound Field in a Waveguide with Random Inhomogeneities	269
4.3.1	Redistribution of acoustic energy between normal modes under conditions of ray chaos	269
4.3.2	Transient wave field	274
4.4	Wave Beam in an Ocean Acoustic Waveguide	287
4.4.1	Ray-based description of a wave beam	288
4.4.2	Wave beam and its modal structure in the presence of random internal waves	301
4.5	Arrival Times of Sound Pulses in the Presence of Internal Waves and a Mesoscale Inhomogeneity	306
4.5.1	Variation of the timefront in the presence of synoptic eddy	307
4.5.2	The use of a vertical receiving array for measuring travel time delays	310
4.6	Summary	315
5.	Glossary of Some Concepts and Notations in Hamiltonian Chaos Theory	319
Appendix A	Models of a Waveguide	351
A.1	Canonical Munk Profile	351
A.2	Linear Profile	354
A.3	Bilinear Profile	355
A.4	Biexponential Profile	358
Appendix B	Derivation of Ray Equations	363
Appendix C	Solution of the Transport Equation	365
Appendix D	Stationary Phase Technique	369
	<i>Bibliography</i>	371
	<i>Index</i>	385
