Foreword	vii
Preface	xiii
1. Introduction	1
1.1 What is Electromigration?	1
1.2 Importance of Electromigration	2
1.3 Outlines of this Book	6
2. History of Electromigration	11
2.1 Understanding the Physics of Electromigration	11
2.1.1 Quantum mechanical theory of electromigration	11
2.1.2 Practical engineering electromigration formulation	16
2.1.3 Concept of flux divergence	20
2.2 Electromigration Lifetime Modeling	22
2.3 Electromigration Lifetime Improvement	29
2.4 Electromigration Aware IC Design	30
3. Experimental Studies of Al Interconnections	37
3.1 Introduction	37
3.2 Process-Induced Failure Physics	38
3.2.1 Microstructural inhomogeneities of metallization	38
3.2.1.1 Grain size	40
3.2.1.2 Grain size distribution	40

3.2.1.3	Texture of a metal line	41
3.2.2	Presence of impurity	42
3.2.3	Mechanical stress in the film	43
3.2.4	Presence of defect	45
3.2.4.1	Length dependence of lifetime	45
3.2.4.2	Length dependence of the standard deviation of EM lifetime distribution	46
3.2.5	Temperature gradient	46
3.2.6	Material differences	51
3.2.7	Temperature	52
3.3	Design-Induced Failure Mechanisms	54
3.3.1	Proximity of metal lines	54
3.3.2	Inter-metal dielectric (IMD) thickness between metal lines and oxide thickness underneath the first metallization	54
3.3.3	Number of metallization levels	54
3.3.4	Use of barrier layers	55
3.3.5	Via separation length	58
3.3.6	Cornering of metal line and Step height of metal lines	59
3.3.7	Use of passivation layer	59
3.3.8	Metal width variation	61
3.3.9	Reservoir effect	61
3.4	Self-Induced Process During EM	63
3.4.1	Self-induced stress gradient	63
3.4.2	Self-induced temperature gradient	64
3.4.3	Microstructure change of interconnect	65
3.5	Electromigration Test Structure Design	67
3.5.1	NIST test structure	68
3.5.2	Test structure for multi-level metallization	73
3.5.3	Test structure for bamboo structure	77
3.6	Package-Level Electromigration Test (PET)	77
3.7	Rapid Electromigration Test	79
3.7.1	TRACE method	80
3.7.2	Standard Wafer-level Electromigration Accelerated Test (SWEAT)	83

3.7.3	Wafer-level isothermal Joule-heated electromigration test (WIJET)	85
3.7.4	Wafer level constant current electromigration test (Lee, Tibel and Sullivan 2000)	87
3.7.5	Breakdown energy of metal (BEM)	87
3.7.6	Pitfalls of SWEAT	90
3.7.7	Potential pitfalls of constant current test method	99
3.7.8	Potential pitfall of breakdown energy method (BEM)	100
3.7.9	Potential pitfalls of WIJET	100
3.7.10	Summary	101
3.7.11	Highly accelerated electromigration test	101
3.8	Practical Consideration in Electromigration Testing	103
3.8.1	Failure criteria used in EM testing	103
3.8.2	Interpretation of the measured $\Delta R/R_0$	105
3.8.3	Actual temperature of test strips	108
3.8.4	Test structure used	109
3.8.5	Current density used	109
3.8.6	Short length effect	109
3.8.7	Failure model used in EM accelerated testing (deviation from Black equation)	111
3.9	Failure Modes in Electromigration	113
3.9.1	Open/resistance increase	113
3.9.2	Short	115
3.10	Test Data Analysis	115
3.11	Failure Analysis on EM Failures	125
3.12	Conclusion	133
4.	Experimental Studies of Cu Interconnections	143
4.1	Different in Interconnect Processing and its Impact on EM Physics	144
4.2	Process-induced Failure Physics	152
4.2.1	Interface between Cu and surrounding materials	152
4.2.1.1	Surface engineering	153
4.2.1.2	Alternative cap-layer materials	156
4.2.2	Microstructure	162

4.2.3	Presence of impurity	173
4.2.4	Mechanical stress	180
4.2.5	Barrier metal	191
4.2.6	Presence of defects	199
4.2.7	Temperature gradient	200
4.2.8	Material differences	200
4.2.9	Temperature	201
4.3	Design-Induced Failure Mechanism	202
4.3.1	Line width dependence of EM lifetime	202
4.3.2	Current crowding	208
4.3.3	Line width transition	211
4.3.4	Reservoir effect	212
4.3.5	Current direction dependence of EM lifetime	217
4.3.6	Blech short length effect	221
4.3.7	Via structure design	224
4.4	Electromigration Testing	225
4.5	Statistics of Cu Electromigration	228
5.	Numerical Modeling of Electromigration	243
5.1	1D Continuum Electromigration Modeling	245
5.2	2D EM Modeling	246
5.2.1	Sharp interface model	248
5.2.2	Phase field model	251
5.3	Electromigration Simulation Using Atomic Flux Divergence and Finite Element Analysis	253
5.3.1	Computation methods for Atomic Flux Divergence (AFD)	254
5.3.1.1	Formulation of AFD	254
5.3.1.2	Voiding mechanism simulation	257
5.3.1.3	Lifetime prediction	258
5.4	Monte Carlo Simulation of Electromigration	260
5.4.1	Monte Carlo simulation of the movement of atoms during EM	260
5.4.2	Monte Carlo simulation of void movement during EM	262
5.4.3	Holistic EM simulation	263
5.5	Resistance Change Modeling	264

6. Future Challenges	269
6.1 Electromigration Modeling	269
6.2 EDA Tool Development	271
6.3 Physics of Electromigration	274
6.4 Electromigration Testing	274
6.5 New Failure Mechanism for Interconnects	275
6.6 Alternative Interconnect Structure	277
6.7 Alternative Interconnect System	278
Index	285
Biography	291
