<b>Preface</b>	<b>vii</b>
<b>CHAPTER 1. FROM PHOTONS TO IMAGE FORMATION</b>	<b>1</b>
1.1 Light and Lighting . . . . .	1
1.1.1 Nature of Light . . . . .	1
1.1.1.1 Basics . . . . .	1
1.1.1.2 Spectral Composition of Light . . . . .	3
1.1.1.3 Indexes of Refraction . . . . .	5
1.1.2 Sources of Light, Receptor Illumination . . . . .	6
1.1.2.1 Point Source . . . . .	7
1.1.2.2 Distant Compact Source . . . . .	8
1.1.2.3 Distributed Light Source . . . . .	9
1.1.3 Reflection and Transparency . . . . .	11
1.1.3.1 Specular Reflection . . . . .	11
1.1.3.2 Diffuse Reflection . . . . .	13
1.1.3.3 Examples of Objects and Surfaces . . . . .	15
1.1.4 Atmospheric Diffusion . . . . .	15
1.1.4.1 The Particles' Size is Smaller Than the Wavelength . . . . .	16
1.1.4.2 The Particles' Size is Larger Than Wavelength	17
1.2 Optics . . . . .	18
1.2.1 Image Formation . . . . .	18
1.2.1.1 Lens Formula . . . . .	18
1.2.1.2 Thin Lens . . . . .	19

1.2.2	Image on a Receptor Surface . . . . .	20
1.2.2.1	Focusing . . . . .	20
1.2.2.2	Depth of Field . . . . .	20
1.2.3	Photometry and Lenses . . . . .	21
1.2.3.1	Image of a Lambertian Surface . . . . .	21
1.2.3.2	Invariance of Optical Extent . . . . .	22
1.2.4	Physical Limitations to Resolution . . . . .	23
1.2.4.1	Defocus Blur . . . . .	23
1.2.4.2	Motion Blur . . . . .	23
1.2.4.3	Diffraction . . . . .	23
1.2.4.4	Photon Noise . . . . .	24
1.2.4.5	Atmospheric Effect . . . . .	26
1.3	From 3D World to 2D Images . . . . .	26
1.3.1	The Pinhole Camera and Its Model . . . . .	26
1.3.2	Basic Equations, Homogeneous Coordinates . . . . .	26
1.3.3	Linear Algebra in Homogeneous Coordinates . . . . .	29
1.3.3.1	One Point on a Line . . . . .	29
1.3.3.2	Two Points Define a Line . . . . .	30
1.3.3.3	Two Lines Define a Point . . . . .	30
1.3.4	Stereovision . . . . .	31
1.3.4.1	Basic Formulae . . . . .	31
1.3.4.2	Essential and Fundamental Matrices . . . . .	32
1.3.4.3	Epipolar Lines . . . . .	33
1.3.5	Perspective Transformation of Surfaces . . . . .	33
1.3.5.1	Transformation of Coordinates . . . . .	33
1.3.5.2	Image of the Local Properties of the Viewed Surface . . . . .	36
1.4	From 2D Images to 3D Perception . . . . .	37
1.4.1	Shape From Shading . . . . .	38
1.4.2	Shape From Texture . . . . .	41
1.5	Conclusion . . . . .	42
<b>CHAPTER 2. THE VISUAL SYSTEM OF PRIMATES</b>		<b>44</b>
2.1	Vision and Brain . . . . .	44
2.1.1	From Eye to Visual Cortex . . . . .	44
2.1.2	The Visual Brain . . . . .	46

2.2	Primates' Eyes . . . . .	48
2.2.1	Geometry of the Eye . . . . .	48
2.2.2	Functional Consequences . . . . .	49
2.3	The Retina . . . . .	51
2.3.1	Photoreceptors . . . . .	53
2.3.1.1	Spatial Sampling . . . . .	53
2.3.1.2	Function . . . . .	55
2.3.2	The Outer Plexiform Layer . . . . .	56
2.3.2.1	Synaptic triad . . . . .	56
2.3.2.2	Bipolar Cells . . . . .	58
2.3.2.3	Horizontal Cells . . . . .	59
2.3.3	The Inner Plexiform Layer . . . . .	61
2.3.3.1	Amacrine Cells . . . . .	61
2.3.3.2	Ganglion Cells . . . . .	62
2.3.3.3	Interplexiform Cells . . . . .	64
2.3.4	Summary: Output Signals of the Retina . . . . .	64
2.4	Lateral Geniculate Nucleus . . . . .	64
2.4.1	Anatomy . . . . .	64
2.4.2	Function . . . . .	66
2.5	The Striate Cortex (V1) . . . . .	67
2.5.1	Nature and Topology of V1 Inputs . . . . .	68
2.5.2	Columnar Organization V1 and Functional Properties of V1 . . . . .	70
2.5.3	Simple and Complex Cells, Functional Properties . .	72
2.6	Visual Areas Beyond V1 and Their Functions . . . . .	73
2.6.1	The Most Important Areas . . . . .	73
2.6.1.1	Area V2 . . . . .	73
2.6.1.2	Area V3 . . . . .	74
2.6.1.3	The Ventral Stream . . . . .	74
2.6.1.4	The Dorsal Stream . . . . .	75
2.6.2	Relations Between Areas . . . . .	76
<b>CHAPTER 3. BASIC MODEL OF THE RETINA</b>		<b>79</b>
3.1	Electrical Model of the Cellular Membrane . . . . .	79
3.1.1	Electro-Osmotic Equilibrium . . . . .	79
3.1.2	Membrane Potential, Response to a Stimulation . . .	81
3.1.3	Linear Model . . . . .	83

- 3.2 Gap Junctions and the Basic Retinal Circuit . . . . . 83
  - 3.2.1 Basic Electrical Model and Fundamental Equation . . 84
  - 3.2.2 Spatiotemporal Response . . . . . 85
    - 3.2.2.1 Frequency Representation . . . . . 85
    - 3.2.2.2 Spatial and Temporal Behavior . . . . . 86
    - 3.2.2.3 Spatial and Temporal Inseparability . . . . . 87
- 3.3 Models of the Outer Plexiform Layer . . . . . 88
  - 3.3.1 The Basic Feed-forward Model . . . . . 89
    - 3.3.1.1 Equation . . . . . 89
    - 3.3.1.2 Spatiotemporal Transfer Function of the  
Feed-Forward Model . . . . . 90
    - 3.3.1.3 Comparison with Biological Data . . . . . 92
    - 3.3.1.4 Consequence of Time-Space Inseparability . 93
  - 3.3.2 The Feedback Model . . . . . 95
  - 3.3.3 The Feed-Forward — Feed-Back Model . . . . . 96
  - 3.3.4 The Midget and Diffuse Bipolar Model . . . . . 96
- 3.4 Model of the Inner Plexiform Layer . . . . . 97
  - 3.4.1 Midget and Parasol Ganglion Cells . . . . . 97
  - 3.4.2 The Amacrine Cells . . . . . 97
  - 3.4.3 ON, OFF and Bi-Stratified Ganglion Cells . . . . . 98
  - 3.4.4 Summary of the Retinal Circuits and Output Signals . 99
    - 3.4.4.1 Summary of the Retinal Architecture . . . . . 99
    - 3.4.4.2 Spatial and Temporal Signals . . . . . 100
- 3.5 Response of the Model to Moving Objects . . . . . 102
  - 3.5.1 Basic Formulae for Motion . . . . . 102
  - 3.5.2 Retinal Filter with Motion . . . . . 104
  - 3.5.3 Retinal Processing of Moving Images . . . . . 106
- 3.6 Neuromorphic Circuits . . . . . 107
  - 3.6.1 Advantages . . . . . 108
  - 3.6.2 Limitations . . . . . 109
  - 3.6.3 Applications . . . . . 109

**CHAPTER 4. NEUROMORPHIC CIRCUITS AND MOTION ESTIMATION 111**

- 4.1 Models of Motion . . . . . 111
  - 4.1.1 Problems of Motion Estimation . . . . . 113
    - 4.1.1.1 Frequency Domain Approaches . . . . . 113

4.1.1.2	Spatio-Temporal Domain Approaches . . . . .	115
4.1.2	More General Cases . . . . .	117
4.1.2.1	The Image May Vary in Time . . . . .	117
4.1.2.2	Motion Transparency . . . . .	120
4.1.2.3	Influences of Spatial and Temporal Sampling . . . . .	121
4.2	Velocity-Tuned Filter and Motion Estimation . . . . .	123
4.2.1	Principle . . . . .	123
4.2.1.1	Equation and Structure . . . . .	124
4.2.1.2	The Spatio-Temporal Response . . . . .	126
4.2.1.3	Response to Moving Patterns . . . . .	127
4.2.2	Circuit for Motion Estimation . . . . .	128
4.2.2.1	The Necessity of a Pre-Filtering . . . . .	128
4.2.2.2	Estimation of Local Energy . . . . .	129
4.2.2.3	Combination of VTF . . . . .	130
4.3	The Aperture Problem . . . . .	131
4.3.1	Definition . . . . .	131
4.3.2	Detection of Aperture Problems . . . . .	132
4.3.3	First Solution: Spatial Integration . . . . .	133
4.3.4	Solution with Limited Spatial Integration . . . . .	134
4.4	Application Examples . . . . .	135
4.4.1	Circuit Example for One Spatial Dimension . . . . .	135
4.4.1.1	Architecture of the Circuit . . . . .	135
4.4.1.2	Signals and Estimated Motion . . . . .	137
4.4.2	Examples with Two Spatial Dimensions . . . . .	137
4.4.2.1	The Camera is Static . . . . .	137
4.4.2.2	The Camera is Moving . . . . .	138
4.4.2.3	Using Objects Boundaries . . . . .	139
<b>CHAPTER 5. COLOR PROCESSING IN THE RETINA</b>		<b>141</b>
5.1	Color Coding in the Retina . . . . .	141
5.1.1	Biological Data . . . . .	142
5.1.2	How to Build a Retina . . . . .	144
5.1.2.1	How Many Kinds of Receptors? . . . . .	144
5.1.2.2	Choice of the Spatial Distribution of Spectral Sensitivities . . . . .	144
5.1.3	Problem of Modeling . . . . .	146

5.2	A Simple Model in Order to Understand . . . . .	146
5.2.1	One-Dimensional Regular Sampling for Three Receptors	146
5.2.1.1	Basic Equations and Frequency Representation	146
5.2.1.2	What Happens in the Cones Layer . . . . .	150
5.2.1.3	What Happens in the Outer Plexiform Layer	150
5.2.1.4	Consequence . . . . .	152
5.2.2	The Case of Two Dimensional Regular Sampling . . .	153
5.3	Model of Random Sampling . . . . .	153
5.3.1	Sampling Function for One Receptor . . . . .	154
5.3.2	Model of the Random Multiplexing for Three Receptors	156
5.3.2.1	Principle . . . . .	156
5.3.2.2	Towards the Luminance/Chrominance Representation . . . . .	156
5.3.2.3	Emergence of Chromatic Oppositions . . . . .	158
5.3.3	Comparison with Biological Data . . . . .	158
5.4	Frequency Spectrum of the Random Sampling . . . . .	160
5.4.1	Autocorrelation of the Multiplexed Signal . . . . .	160
5.4.1.1	Luminance and Chrominance Signals are Decorrelated . . . . .	160
5.4.1.2	Autocorrelation of Luminance . . . . .	161
5.4.1.3	Autocorrelation of Chrominance . . . . .	161
5.4.1.4	Markovian process . . . . .	164
5.4.2	Spectral Representation . . . . .	165
5.4.3	Decoding Luminance and Chrominance . . . . .	167
5.4.3.1	Spatial Filtering and Demodulation . . . . .	167
5.4.3.2	Luminance — Chrominance Energy Ratio . .	168
5.4.3.3	Economy of Connections, the case of S Cones	170
5.5	Application to CCD Cameras . . . . .	170
<b>CHAPTER 6. NON-LINEAR, IRREGULAR AND NON-STATIONARY PROCESSES</b>		<b>173</b>
6.1	Photoreceptor's Irregular Spatial Sampling . . . . .	173
6.1.1	Biological Data . . . . .	173
6.1.2	Geometry of the Eye . . . . .	175
6.1.3	Retinal Sampling . . . . .	176

6.1.4	Consequences: Advantages of Logarithmic Coordinates . . . . .	178
6.1.4.1	Constancy of Peripheral Description . . . . .	178
6.1.4.2	Measure of Time-to-Contact . . . . .	178
6.1.4.3	Interest for Retinal Filters Design . . . . .	179
6.1.5	Consequences at the Cortical Level . . . . .	180
6.2	The Random Sampling Model . . . . .	183
6.3	Log-Polar Cortical Projections . . . . .	185
6.3.1	Simplified Model . . . . .	185
6.3.2	Extraction of Global Motion Information . . . . .	186
6.3.3	Conclusion . . . . .	187
6.4	Photoreceptor's Non-Linearity and Adaptation . . . . .	188
6.4.1	Range of Lighting and Photoreceptors' Sensitivity . . . . .	188
6.4.2	Modeling the Photoreceptor's Non-Linearity . . . . .	189
6.4.3	Modeling the Photoreceptor's Adaptivity . . . . .	191
6.4.3.1	Light Conversion in the Photoreceptor . . . . .	191
6.4.3.2	Equations for a Simplified Model . . . . .	192
6.4.3.3	Model for Temporal and Spatial Adaptation . . . . .	193
6.5	Non-Linearity in the IPL . . . . .	195
6.5.1	Adaptive Non-Linearity in IPL . . . . .	195
6.5.2	Consequences on the Processing of Images . . . . .	196
6.5.2.1	OPL: Seeing in Cast Shadows . . . . .	196
6.5.2.2	IPL: Seeing Details Everywhere . . . . .	198
6.6	Non-Linearity, Adaptation and Color . . . . .	198
6.6.1	Cone and Luminance Non-Linearities Look the Same . . . . .	198
6.6.2	The Effect on Chrominance . . . . .	199
6.6.3	The Complementary Color After-Effect . . . . .	201
6.6.4	Color Constancy . . . . .	203
6.6.5	MacAdam Ellipses . . . . .	206
6.7	Adaptation in the Visual Cortex . . . . .	207
6.7.1	Visual After-Effects . . . . .	207
6.7.2	The McCollough Effect . . . . .	209
6.7.2.1	Phenomenology . . . . .	209
6.7.2.2	Model of the McCollough effect . . . . .	211
6.7.2.3	Simulations . . . . .	213

<b>CHAPTER 7. CORTICAL PROCESSING OF IMAGES</b>	<b>216</b>
7.1 Properties of Natural Images . . . . .	217
7.1.1 Statistics of Natural Scenes . . . . .	217
7.1.2 Fourier Transform and Frequency Spectra of Images .	218
7.1.2.1 Image Frequency Spectra . . . . .	218
7.1.2.2 Manipulations on Image Spectra . . . . .	219
7.1.2.3 Image Spectra Under Affine Transforms . . .	219
7.2 Cortical Filters Models and Spatial Frequency Analysis . . . .	220
7.2.1 Simple and Complex Cells in V1 and Models . . . . .	220
7.2.2 The Gabor Filter Model . . . . .	221
7.2.2.1 Bi-dimensional Gabor Filter and Local Frequency Analysis . . . . .	221
7.2.2.2 Log-Polar Representation of Frequency . . .	223
7.2.2.3 Notion of Sparseness . . . . .	224
7.2.3 The Log-Normal Model . . . . .	224
7.2.3.1 Optimally Sampling the Frequency Spectrum . . . . .	224
7.2.3.2 Log-Normal Filters and Image Zoom and Rotation . . . . .	226
7.2.3.3 Spectral Form and Coverage of Log-Normal Filters . . . . .	227
7.3 Scene Categorization . . . . .	229
7.3.1 The Problem . . . . .	229
7.3.1.1 The Coding of Images . . . . .	229
7.3.1.2 Representation of High-Dimensional Spaces . . . . .	230
7.3.2 Curvilinear Component Analysis . . . . .	231
7.3.2.1 Principle . . . . .	231
7.3.2.2 Global Unfolding and Local Projection . . .	232
7.3.3 Application to Scene Categorization . . . . .	234
7.4 Attention and Saliency . . . . .	235
7.4.1 Observing an Image . . . . .	235
7.4.2 Modeling Saliency . . . . .	236
7.4.3 Comparison with Human Behavior . . . . .	237
7.5 Perspective Estimation . . . . .	239
7.5.1 The Geometry of a Conic Projection . . . . .	240

7.5.2	Local Spatial Frequency Spectra . . . . .	241
7.5.3	Mean Frequency from Log-Normal Filters . . . . .	244
7.5.4	Shape Recovery . . . . .	245
7.6	Complementary Considerations . . . . .	247
7.6.1	Back to the Power Frequency Spectrum . . . . .	247
7.6.2	Small Number of Samples . . . . .	247
7.6.3	Toward a Model of V4 . . . . .	249
	<b>Bibliography</b>	<b>250</b>
	<b>Index</b>	<b>285</b>
