<i>Foreword</i>	v
<i>Preface</i>	vii
<i>Some Notation</i>	xi
1. Models and Ideas of Classical Mechanics	1
1.1 Orientation	1
1.2 Some Words on the Fundamentals of Our Subject	2
1.3 Metric Spaces and Spaces of Particles	4
1.4 Vectors and Vector Spaces	8
1.5 Normed Spaces and Inner Product Spaces	11
1.6 Forces	16
1.7 Equilibrium and Motion of a Rigid Body	21
1.8 D'Alembert's Principle	23
1.9 The Motion of a System of Particles	25
1.10 The Rigid Body	31
1.11 Motion of a System of Particles; Comparison of Trajectories; Notion of Operator	33
1.12 Matrix Operators and Matrix Equations	40
1.13 Complete Spaces	44
1.14 Completion Theorem	48
1.15 Lebesgue Integration and the L^p Spaces	54
1.16 Orthogonal Decomposition of Hilbert Space	60
1.17 Work and Energy	63
1.18 Virtual Work Principle	67
1.19 Lagrange's Equations of the Second Kind	70

1.20	Problem of Minimum of a Functional	74
1.21	Hamilton's Principle	83
1.22	Energy Conservation Revisited	85
2.	Simple Elastic Models	89
2.1	Introduction	89
2.2	Two Main Principles of Equilibrium and Motion for Bodies in Continuum Mechanics	89
2.3	Equilibrium of a Spring	91
2.4	Equilibrium of a String	95
2.5	Equilibrium Boundary Value Problems for a String	100
2.6	Generalized Formulation of the Equilibrium Problem for a String	105
2.7	Virtual Work Principle for a String	108
2.8	Riesz Representation Theorem	112
2.9	Generalized Setup of the Dirichlet Problem for a String	115
2.10	First Theorems of Imbedding	116
2.11	Generalized Setup of the Dirichlet Problem for a String, Continued	120
2.12	Neumann Problem for the String	122
2.13	The Generalized Solution of Linear Mechanical Problems and the Principle of Minimum Total Energy	126
2.14	Nonlinear Model of a Membrane	128
2.15	Linear Membrane Theory: Poisson's Equation	131
2.16	Generalized Setup of the Dirichlet Problem for a Linear Membrane	132
2.17	Other Membrane Equilibrium Problems	145
2.18	Banach's Contraction Mapping Principle	151
3.	Theory of Elasticity: Statics and Dynamics	157
3.1	Introduction	157
3.2	An Elastic Bar Under Stretching	158
3.3	Bending of a beam	168
3.4	Generalized Solutions to the Equilibrium Problem for a Beam	175
3.5	Generalized Setup: Rough Qualitative Discussion	179
3.6	Pressure and Stresses	181
3.7	Vectors and Tensors	188

3.8	The Cauchy Stress Tensor, Continued	196
3.9	Basic Tensor Calculus in Curvilinear Coordinates	202
3.10	Euler and Lagrange Descriptions of Continua	207
3.11	Strain Tensors	208
3.12	The Virtual Work Principle	214
3.13	Hooke's Law in Three Dimensions	218
3.14	The Equilibrium Equations of Linear Elasticity in Displacements	221
3.15	Virtual Work Principle in Linear Elasticity	224
3.16	Generalized Setup of Elasticity Problems	227
3.17	Existence Theorem for an Elastic Body	231
3.18	Equilibrium of a Free Elastic Body	232
3.19	Variational Methods for Equilibrium Problems	235
3.20	A Brief but Important Remark	243
3.21	Countable Sets and Separable Spaces	243
3.22	Fourier Series	245
3.23	Problem of Vibration for Elastic Structures	249
3.24	Self-Adjointness of A and Its Consequences	252
3.25	Compactness of A	255
3.26	Riesz–Fredholm Theory for a Linear, Self-Adjoint, Compact Operator in a Hilbert Space	262
3.27	Weak Convergence in Hilbert Space	267
3.28	Completeness of the System of Eigenvectors of a Self-Adjoint, Compact, Strictly Positive Linear Operator	272
3.29	Other Standard Models of Elasticity	277
Appendix A Hints for Selected Exercises		281
<i>Bibliography</i>		293
<i>Index</i>		295
