<i>Preface</i>	vii
<i>Acknowledgments</i>	xiii
<i>List of Figures</i>	xxiii
<i>List of Examples</i>	xxv

Dynamical Systems	1
1. Differential Equations	3
1.1 Galileo's pendulum	3
1.2 D'Alembert transformation	5
1.3 From differential equations to dynamical systems	6
2. Dynamical Systems	7
2.1 State space – phase space	8
2.2 Definition	8
2.3 Existence and uniqueness	8
2.4 Flow, fixed points and null-clines	9
2.5 Stability theorems	13
2.5.1 Linearized system	13
2.5.2 Hartman-Grobman linearization theorem	13
2.5.3 Liapounoff stability theorem	13
2.6 Phase portraits of dynamical systems	14
2.6.1 Two-dimensional systems	14
2.6.2 Three-dimensional systems	18

2.7	Various types of dynamical systems	22
2.7.1	Linear and nonlinear dynamical systems	22
2.7.2	Homogeneous dynamical systems	22
2.7.3	Polynomial dynamical systems	22
2.7.4	Singularly perturbed systems	23
2.7.5	Slow-Fast dynamical systems	24
2.8	Two-dimensional dynamical systems	24
2.8.1	Poincaré index	24
2.8.2	Poincaré contact theory	26
2.8.3	Poincaré limit cycle	27
2.8.4	Poincaré-Bendixson Theorem	29
2.9	High-dimensional dynamical systems	31
2.9.1	Attractors	31
2.9.2	Strange attractors	32
2.9.3	First integrals and Lie derivative	34
2.10	Hamiltonian and integrable systems	34
2.10.1	Hamiltonian dynamical systems	34
2.10.2	Integrable system	35
2.10.3	K.A.M. Theorem	37
3.	Invariant Sets	41
3.1	Manifold	41
3.1.1	Definition	41
3.1.2	Existence	42
3.2	Invariant sets	42
3.2.1	Global invariance	42
3.2.2	Local invariance	44
4.	Local Bifurcations	47
4.1	Center Manifold Theorem	47
4.1.1	Center manifold theorem for flows	48
4.1.2	Center manifold approximation	49
4.1.3	Center manifold depending upon a parameter	53
4.2	Normal Form Theorem	54
4.3	Local Bifurcations of Codimension 1	60
4.3.1	Saddle-node bifurcation	62
4.3.2	Transcritical bifurcation	63
4.3.3	Pitchfork bifurcation	64

4.3.4	Hopf bifurcation	66
5.	Slow-Fast Dynamical Systems	69
5.1	Introduction	69
5.2	Geometric Singular Perturbation Theory	72
5.2.1	Assumptions	72
5.2.2	Invariance	73
5.2.3	Slow invariant manifold	74
5.3	Slow-fast dynamical systems – Singularly perturbed systems	81
5.3.1	Singularly perturbed systems	81
5.3.2	Slow-fast autonomous dynamical systems	81
6.	Integrability	85
6.1	Integrability conditions, integrating factor, multiplier	85
6.1.1	Two-dimensional dynamical systems	86
6.1.2	Three-dimensional dynamical systems	89
6.2	First integrals – Jacobi’s last multiplier theorem	94
6.2.1	First integrals	94
6.2.2	Jacobi’s last multiplier theorem	95
6.3	Darboux theory of integrability	96
6.3.1	Algebraic particular integral – General integral	96
6.3.2	General integral	98
6.3.3	Multiplier	100
6.3.4	Algebraic particular integral and fixed points	102
6.3.5	Homogeneous polynomial dynamical systems of degree m	102
6.3.6	Homogeneous polynomial dynamical systems of degree two	108
6.3.7	Planar polynomial dynamical systems	114

Differential Geometry **121**

7.	Differential Geometry	123
7.1	Concept of curves – Kinematics vector functions	124
7.1.1	Trajectory curve	124
7.1.2	Instantaneous velocity vector	124
7.1.3	Instantaneous acceleration vector	125

7.2	Gram-Schmidt process – Generalized Frénet moving frame	125
7.2.1	Gram-Schmidt process	126
7.2.2	Generalized Frénet moving frame	126
7.3	Curvatures of trajectory curves – Osculating planes	127
7.4	Curvatures and osculating plane of space curves	129
7.4.1	Frénet trihedron – Serret-Frénet formulae	129
7.4.2	Osculating plane	130
7.4.3	Curvatures of space curves	131
7.5	Flow curvature method	133
7.5.1	Flow curvature manifold	133
7.5.2	Flow curvature method	133
8.	Dynamical Systems	135
8.1	Phase portraits of dynamical systems	135
8.1.1	Fixed points	135
8.1.2	Stability theorems	137
9.	Invariant Sets	145
9.1	Invariant manifolds	145
9.1.1	Global invariance	146
9.1.2	Local invariance	147
9.2	Linear invariant manifolds	148
9.3	Nonlinear invariant manifolds	155
10.	Local Bifurcations	159
10.1	Center Manifold	159
10.1.1	Center manifold approximation	159
10.1.2	Center manifold depending upon a parameter	167
10.2	Normal Form Theorem	175
10.3	Local bifurcations of codimension 1	181
11.	Slow-Fast Dynamical Systems	183
11.1	Slow manifold of n -dimensional slow-fast dynamical systems	184
11.2	Invariance	187
11.3	Flow Curvature Method – Singular Perturbation Method	188
11.3.1	Darboux invariance – Fenichel’s invariance	190

11.3.2	Slow invariant manifold	191
11.4	Non-singularly perturbed systems	200
12.	Integrability	203
12.1	First integral	203
12.1.1	Global first integral	203
12.1.2	Local first integral	204
12.2	Linear invariant manifolds as first integral	206
12.3	Darboux theory of integrability	209
12.3.1	General integral – Multiplier	209
12.3.2	Darboux homogeneous polynomial dynamical systems of degree two	211
12.3.3	Planar polynomial dynamical systems	212
13.	Inverse Problem	215
13.1	Flow curvature manifold of polynomial dynamical systems	215
13.1.1	Two-dimensional polynomial dynamical systems	215
13.1.2	Three-dimensional polynomial dynamical systems	217
13.2	Flow curvature manifold symmetry (parity)	218
13.2.1	Two-dimensional polynomial dynamical systems	219
13.2.2	n -dimensional polynomial dynamical systems	220
13.3	Inverse problem for polynomial dynamical systems	222
13.3.1	Two-dimensional polynomial dynamical systems	222
13.3.2	Three-dimensional polynomial dynamical systems	223

Applications 225

14.	Dynamical Systems	227
14.1	FitzHugh-Nagumo model	227
14.2	Pikovskii-Rabinovich-Trakhtengerts model	228
15.	Invariant Sets - Integrability	229
15.1	Pikovskii-Rabinovich-Trakhtengerts model	229
15.2	Rikitake model	231
15.3	Chua’s model	232
15.4	Lorenz model	234

16.	Local Bifurcations	237
16.1	Chua's model	237
16.2	Lorenz model	239
17.	Slow-Fast Dynamical Systems – Singularly Perturbed Systems	241
17.1	Piecewise Linear Models 2D & 3D	241
17.1.1	Van der Pol piecewise linear model	241
17.1.2	Chua's piecewise linear model	243
17.2	Singularly Perturbed Systems 2D & 3D	245
17.2.1	FitzHugh-Nagumo model	245
17.2.2	Chua's model	247
17.3	Slow Fast Dynamical Systems 2D & 3D	248
17.3.1	Brusselator model	248
17.3.2	Pikovskii-Rabinovich-Trakhtengerts model	249
17.3.3	Rikitake model	250
17.4	Piecewise Linear Models 4D & 5D	251
17.4.1	Chua's fourth-order piecewise linear model	251
17.4.2	Chua's fifth-order piecewise linear model	253
17.5	Singularly Perturbed Systems 4D & 5D	255
17.5.1	Chua's fourth-order cubic model	255
17.5.2	Chua's fifth-order cubic model	257
17.6	Slow Fast Dynamical Systems 4D & 5D	258
17.6.1	Homopolar dynamo model	258
17.6.2	Mofatt model	260
17.6.3	Magnetoconvection model	261
17.7	Slow manifold gallery	263
17.8	Forced Van der Pol model	263
	<i>Discussion</i>	265
	Appendix A	269
A.1	Lie derivative	269
A.2	Hessian	270
A.3	Jordan form	270
A.4	Connected region	271
A.5	Fractal dimension	272
A.5.1	Kolmogorov or capacity dimension	273
A.5.2	Liapounoff exponents – Wolf, Swinney, Vastano algorithm	273

A.5.3	Liapounoff dimension and Kaplan-Yorke conjecture	274
A.5.4	Liapounoff dimension and Chlouverakis-Sprott conjecture	275
A.6	Identities	276
A.6.1	Concept of curves	276
A.6.2	Gram-Schmidt process and Frénet moving frame .	277
A.6.3	Frénet trihedron and curvatures of space curves .	279
A.6.4	First identity	280
A.6.5	Second identity	281
A.6.6	Third identity	282
A.7	Homeomorphism and diffeomorphism	283
A.7.1	Homeomorphism	283
A.7.2	Diffeomorphism	283
A.8	Differential equations	283
A.8.1	Two-dimensional dynamical systems	283
A.8.2	Three-dimensional dynamical systems	284
A.9	Generalized Tangent Linear System Approximation	285
A.9.1	Assumptions	285
A.9.2	Corollaries	285
