

# CONTENTS

<i>Preface</i>	v
<b>Part I. Alternative Investments</b>	
Chapter 1. Socially Responsible Investments	3
<i>Sven Hroß, Christofer Vogt and Rudi Zagst</i>	
1.1 Introduction . . . . .	4
1.2 Recent Research on SRI . . . . .	5
1.3 How Sustainable is Sustainability? . . . . .	6
1.3.1 Description of the Dataset . . . . .	6
1.3.2 Introduction to Markov Transition Matrices . . . . .	6
1.3.3 Results of Markov Transition Matrices . . . . .	7
1.4 SRI in Portfolio Context . . . . .	8
1.4.1 Description of the Dataset and Statistical Properties . . . . .	8
1.4.2 Markov-Switching Model . . . . .	11
1.4.3 Fitting the Model Parameters . . . . .	11
1.4.4 Simulation of Returns . . . . .	13
1.4.5 Portfolio Optimization Models . . . . .	13
1.4.6 Definition of Investor Types . . . . .	15
1.4.7 Optimal Portfolios . . . . .	15
1.5 Conclusion . . . . .	18
Chapter 2. Listed Private Equity in a Portfolio Context	21
<i>Philipp Aigner, Georg Beyschlag, Tim Friederich, Markus Kalepky and Rudi Zagst</i>	
2.1 Introduction . . . . .	22
2.2 Defining Private Equity Categories . . . . .	23
2.2.1 Financing Stages . . . . .	23
2.2.2 Divestment Strategies . . . . .	24

2.2.3	Type of Financing . . . . .	25
2.2.4	Classification of Private Equity Fund Investments . . . . .	26
2.2.4.1	Venture capital funds . . . . .	26
2.2.4.2	Buyout funds . . . . .	27
2.2.4.3	Leveraged buyouts (LBO) . . . . .	27
2.3	Investment Possibilities — One Asset, Many Classes . . . . .	28
2.3.1	Direct Investments . . . . .	28
2.3.2	Private Equity Funds . . . . .	29
2.3.2.1	Key players . . . . .	29
2.3.3	Cash Flow Structure of a Private Equity Fund . . . . .	31
2.3.4	Fund-of-Funds . . . . .	32
2.3.4.1	Structure of a private equity fund-of-funds . . . . .	32
2.3.4.2	Advantages . . . . .	32
2.3.4.3	Disadvantages . . . . .	33
2.3.5	Publicly Traded Private Equity . . . . .	33
2.3.6	Secondary Transactions . . . . .	34
2.3.6.1	Types of secondary transactions . . . . .	34
2.3.6.2	Buyer's motivation . . . . .	35
2.4	Private Equity as Alternative Asset Class in an Investment Portfolio . . . . .	35
2.4.1	Characteristics of LPE Return Series . . . . .	36
2.4.2	Modeling Return Series with Markov-Switching Processes . . . . .	37
2.4.2.1	Markov–Switching models . . . . .	37
2.4.2.2	Fitting the parameters . . . . .	39
2.4.2.3	Simulation of return paths . . . . .	40
2.4.3	Listed Private Equity in Asset Allocation . . . . .	40
2.4.3.1	Performance measurement . . . . .	40
2.4.3.2	Portfolio optimization frameworks . . . . .	42
2.4.3.3	Definition of investor types . . . . .	43
2.4.3.4	Optimization of portfolios . . . . .	44
2.5	Conclusion . . . . .	47
Chapter 3. Alternative Real Assets in a Portfolio Context		51
<i>Wolfgang Mader, Sven Treu and Sebastian Willutzky</i>		
3.1	Introduction . . . . .	52
3.2	Overview on Alternative Real Assets . . . . .	52
3.3	Modeling Photovoltaic Investments . . . . .	53
3.3.1	General Approach . . . . .	53
3.3.2	Definition of the Investment Project . . . . .	54

3.3.3	Modeling of Risk Factors . . . . .	56
3.3.3.1	Economic factors . . . . .	56
3.3.3.2	Non-economic factors . . . . .	57
3.3.3.3	Historical analysis of monthly global irradiance . . . . .	58
3.3.3.4	Monte Carlo analysis of yearly global irradiance . . . . .	61
3.4	Photovoltaic Investments in a Portfolio Context . . . . .	63
3.4.1	Setting the Portfolio Context . . . . .	63
3.4.2	Including Photovoltaic Investments in a Portfolio . . . . .	64
3.4.3	Results . . . . .	66
3.5	Conclusion . . . . .	68
Chapter 4. The Freight Market and Its Derivatives		71
<i>Rüdiger Kiesel and Patrick Scherer</i>		
4.1	Introduction: the Freight Market . . . . .	72
4.1.1	Vessels . . . . .	72
4.1.2	Cargo . . . . .	72
4.1.3	Routes . . . . .	73
4.2	Freight Rates: What Drives the Market? . . . . .	74
4.2.1	Demand for Shipping Capacity . . . . .	75
4.2.2	Supply of Shipping Capacity . . . . .	76
4.2.3	Costs . . . . .	77
4.3	Freight Derivatives: Hedging or Speculating? . . . . .	77
4.3.1	Forward Freight Agreement . . . . .	77
4.3.2	Freight Futures . . . . .	78
4.4	Explanatory Variables . . . . .	79
4.4.1	Explanatory Power . . . . .	80
4.4.2	Granger Causality . . . . .	82
4.4.3	Selection Algorithm “Top Five” . . . . .	83
4.4.4	Cointegration . . . . .	84
4.5	Predicting Freight Spot and Futures Rates . . . . .	86
4.6	The Backtesting Algorithm . . . . .	88
4.7	Conclusion . . . . .	90
Chapter 5. On Forward Price Modeling in Power Markets		93
<i>Fred Espen Benth</i>		
5.1	Introduction . . . . .	94
5.2	HJM Approach to Power Forward Pricing . . . . .	95
5.3	Power Forwards and Approximation by Geometric Brownian Motion . . . . .	98

5.3.1	A Geometric Brownian Motion Dynamics by Volatility Averaging . . . . .	101
5.3.2	A Geometric Brownian Motion Dynamics by Moment Matching . . . . .	103
5.3.3	The Covariance Structure Between Power Forwards . . . . .	106
5.3.4	The Distribution of a Power Forward . . . . .	108
5.3.5	Numerical Analysis of the Power Forward Distribution . . . . .	110
5.4	Pricing of Options on Power Forwards . . . . .	114
5.5	Conclusion . . . . .	119
Chapter 6. Pricing Certificates Under Issuer Risk		123
<i>Barbara Götzt, Rudi Zagst and Marcos Escobar</i>		
6.1	Introduction . . . . .	124
6.2	The Model . . . . .	125
6.3	Pricing of Certificates Under Issuer Risk . . . . .	126
6.3.1	Building Blocks . . . . .	126
6.3.2	Index Certificates . . . . .	130
6.3.3	Participation Guarantee Certificates . . . . .	132
6.3.4	Bonus Guarantee Certificates . . . . .	134
6.3.5	Discount Certificates . . . . .	135
6.3.6	Bonus Certificates . . . . .	136
6.4	Conclusion . . . . .	139
Chapter 7. Asset Allocation with Credit Instruments		147
<i>Barbara Menzinger, Anna Schlösser and Rudi Zagst</i>		
7.1	Introduction . . . . .	148
7.2	Simulation Framework . . . . .	150
7.3	Framework for Total Return Calculation . . . . .	153
7.4	Optimization Framework . . . . .	156
7.4.1	Mean-Variance Optimization . . . . .	156
7.4.2	CVaR Optimization . . . . .	157
7.5	Model Calibration and Simulation Results . . . . .	157
7.5.1	Mean-Variance Approach . . . . .	162
7.5.2	Conditional Value at Risk . . . . .	164
7.5.3	Comparison of Selected Optimal Portfolios . . . . .	167
7.6	Summary and Conclusion . . . . .	170
Chapter 8. Cross Asset Portfolio Derivatives		175
<i>Stephan Höcht, Matthias Scherer and Philip Seegerer</i>		

8.1	Introduction to Cross Asset Portfolio Derivatives . . . . .	175
8.1.1	Definitions and Examples . . . . .	176
8.2	Collateralized Obligations . . . . .	179
8.3	A Comparison of CFO with CTSO . . . . .	179
8.3.1	Structural Features of CFO . . . . .	179
8.3.2	Structural Features of CTSO . . . . .	181
8.3.3	The Different Risks . . . . .	181
8.3.4	Correlation of Tail Events in CTSO . . . . .	181
8.4	Pricing Cross Asset Portfolio Derivatives . . . . .	182
8.4.1	Pricing Trigger Swaps . . . . .	182
8.4.2	Pricing <i>n</i> th-to-Trigger Baskets . . . . .	183
8.4.3	Pricing CTSO . . . . .	184
8.4.4	Modeling Approaches . . . . .	185
8.4.4.1	The structural approach . . . . .	185
8.4.4.2	The copula approach . . . . .	186
8.4.5	An Example for an <i>n</i> th-to Trigger Basket . . . . .	188
8.4.5.1	A pricing exercise of Example 3 ( <i>structural approach</i> ) . . . . .	188
8.4.5.2	A pricing exercise of Example 3 ( <i>copula approach</i> ) . . . . .	189
8.4.5.3	Resulting model spreads . . . . .	190
8.5	Outlook . . . . .	194
8.6	Conclusion . . . . .	195

**Part II. Alternative Strategies**

Chapter 9.	Dynamic Portfolio Insurance Without Options	201
------------	---	-----

*Dominik Dersch*

9.1	Introduction . . . . .	202
9.2	Simple Strategies . . . . .	203
9.2.1	Buy-and-Hold . . . . .	203
9.2.2	Stop-Loss . . . . .	203
9.2.3	The Bond Floor Strategy . . . . .	204
9.2.4	Plain Vanilla CPPI . . . . .	205
9.3	Historical Simulation I . . . . .	206
9.4	Advanced Features . . . . .	209
9.4.1	Transaction Costs . . . . .	210
9.4.2	Transaction Filter . . . . .	210
9.4.3	Lock-in Levels . . . . .	211

9.4.4	Leverage and Constrain of Exposure . . . . .	212
9.4.5	Rebalancing Strategies for the Risky Portfolio . . . . .	213
9.4.6	CPPI and Beyond . . . . .	213
9.5	Historical Simulation II . . . . .	214
9.5.1	Transaction Costs and Transaction Filter . . . . .	214
9.5.2	Lock-in Levels . . . . .	216
9.5.3	The Use of Leverage . . . . .	220
9.5.4	CPPI on a Multi-Asset Risky Portfolio . . . . .	222
9.6	Implement a Dynamic Protection Strategy with ETF . . . . .	223
9.7	Closing Remarks . . . . .	224
Chapter 10. How Good are Portfolio Insurance Strategies?		227
<i>Sven Balder and Antje Mahayni</i>		
10.1	Introduction . . . . .	228
10.2	Optimal Portfolio Selection with Finite Horizons . . . . .	230
10.2.1	Problem (A) . . . . .	233
10.2.2	Problem (B) . . . . .	234
10.2.3	Problem (C) . . . . .	235
10.2.4	Comparison of Optimal Solutions . . . . .	238
10.3	Utility Loss Caused by Guarantees . . . . .	242
10.3.1	Justification of Guarantees and Empirical Observations . . . . .	242
10.3.2	Utility Loss . . . . .	242
10.4	Utility Loss Caused by Trading Restrictions and Transaction Costs . . . . .	246
10.4.1	Discrete-Time CPPI . . . . .	246
10.4.2	Discrete-Time Option-Based Strategy . . . . .	249
10.4.3	Comments on Utility Loss and Shortfall Probability . . . . .	250
10.5	Utility Loss Caused by Guarantees and Borrowing Constraints . . . . .	252
10.6	Conclusion . . . . .	254
Chapter 11. Portfolio Insurances, CPPI and CPDO, Truth or Illusion?		259
<i>Elisabeth Joossens and Wim Schoutens</i>		
11.1	Introduction . . . . .	260
11.2	Credit Risk and Credit Default Swaps . . . . .	261
11.2.1	Credit Risk . . . . .	261
11.2.2	Credit Default Swaps (CDS) . . . . .	265
11.3	Portfolio Insurances . . . . .	267

11.4	Modeling of CPPI Dynamics Using Multivariate Jump-Driven Processes . . . . .	270
11.4.1	Multivariate Variance Gamma Modeling . . . . .	270
11.4.2	Swaptions on Credit Indices . . . . .	273
11.4.2.1	Black’s model . . . . .	273
11.4.2.2	The variance gamma model . . . . .	274
11.4.3	Spread Modeling by Correlated VG Processes . . . . .	275
11.4.3.1	The pricing of CPPIs . . . . .	275
11.4.3.2	Gap risk . . . . .	279
11.5	Recent Developments for CPPI . . . . .	281
11.5.1	Portfolio Insurance: The Extreme Value Approach to the CPPI Method . . . . .	282
11.5.2	VaR Approach for Credit CPPI . . . . .	283
11.5.3	CPPI with Cushion Insurance . . . . .	284
11.6	A New Financial Instrument: Constant Proportion Debt Obligations . . . . .	285
11.6.1	The Structure . . . . .	285
11.6.2	CPDOs in the Spotlight . . . . .	289
11.6.3	Rating CPDOs Under VG Dynamics . . . . .	289
11.7	Comparison Between CPPI and CPDO . . . . .	291
11.8	Conclusions . . . . .	292
Chapter 12. On the Benefits of Robust Asset Allocation for CPPI Strategies . . . . .		295
<i>Katrin Schöttle and Ralf Werner</i>		
12.1	Motivation . . . . .	296
12.2	The Financial Market . . . . .	296
12.2.1	The Basic Financial Market . . . . .	297
12.2.2	The Riskless Asset . . . . .	298
12.2.3	The Risky Asset . . . . .	298
12.2.4	Classical Mean–Variance Analysis . . . . .	300
12.2.5	The Trading Strategy . . . . .	302
12.3	The Standard CPPI Strategy . . . . .	302
12.3.1	The Simple Case . . . . .	303
12.3.2	The General Case . . . . .	305
12.3.3	Shortfall Probability of CPPI Strategies . . . . .	308
12.3.4	Improving CPPI Strategies . . . . .	310
12.3.5	CPPI Strategies Under Estimation Risk . . . . .	313
12.4	Robust Mean–Variance Optimization and Improved CPPI Strategies . . . . .	316
12.4.1	Robust Mean–Variance Analysis . . . . .	317
12.4.2	Uncertainty Sets Via Expert Opinions or Related Estimators . . . . .	317

12.4.3	Uncertainty Sets Via Confidence Sets . . . . .	319
12.4.4	Usage and Implications for CPPI Strategies . . . . .	321
12.4.5	CPPIs with Robust Asset Allocations . . . . .	323
12.5	Conclusion . . . . .	324
Chapter 13. Robust Asset Allocation Under Model Risk		327
<i>Pauline Barrieu and Sandrine Tobelem</i>		
13.1	Background . . . . .	328
13.2	A Robust Approach to Model Risk . . . . .	329
13.2.1	The Absolute Ambiguity Robust Adjustment . . . . .	330
13.2.2	Relative Ambiguity Robust Adjustment . . . . .	333
13.2.3	ARA Parametrization . . . . .	334
13.3	Some Definitions Relative to the Ambiguity-Adjusted Asset Allocation . . . . .	335
13.4	Empirical Tests . . . . .	336
13.4.1	Portfolios Tested . . . . .	337
13.4.2	Performance Measures . . . . .	339
13.4.3	Results . . . . .	340
13.4.3.1	Performances of the different models . . . . .	341
13.4.3.2	SEU portfolio . . . . .	342
13.4.3.3	Ambiguity robust portfolios . . . . .	342
13.5	Conclusion . . . . .	343
Chapter 14. Semi-Static Hedging Strategies for Exotic Options		345
<i>Hansjörg Albrecher and Philipp Mayer</i>		
14.1	Introduction . . . . .	346
14.2	Hedging Path-Independent Options . . . . .	347
14.2.1	Plain Vanilla Options with Arbitrary Strikes are Liquid . . . . .	348
14.2.2	Finitely Many Liquid Strikes . . . . .	349
14.3	Hedging Barrier and Other Weakly Path Dependent Options . . . . .	350
14.3.1	Model-Dependent Strategies: Perfect Replication . . . . .	351
14.3.2	Model-Dependent Strategies: Approximations . . . . .	357
14.3.3	Model-Independent Strategies: Robust Strategies . . . . .	359
14.4	Hedging Strongly Path-Dependent Options . . . . .	361
14.4.1	Lookback Options . . . . .	362
14.4.2	Asian Options . . . . .	364
14.5	Case Study: Model-Dependent Hedging of Discretely Sampled Options . . . . .	367
14.6	Conclusion and Future Research . . . . .	370

Chapter 15. Discrete-Time Variance-Optimal Hedging in Affine Stochastic Volatility Models 375

*Jan Kallsen, Richard Vierthauer, Johannes Muhle-Karbe and Natalia Shenkman*

15.1 Introduction . . . . . 376

15.2 Discrete-Time Variance-Optimal Hedging . . . . . 377

15.3 The Laplace Transform Approach . . . . . 378

15.4 Application to Affine Stochastic Volatility Models . . . . . 380

15.5 Numerical Illustration . . . . . 388

*Index* 395
