<i>Preface</i>	vii
<i>Biography: Ilya Izrailevich Blekhman</i>	ix
1. Huijgens' Synchronization: A Challenge <i>H. Nijmeijer, A.Y. Pogromsky</i>	1
2. Lyapunov Quantities and Limit Cycles of Two-dimensional Dynamical Systems <i>N.V. Kuznetsov, G.A. Leonov</i>	7
2.1 Introduction . . . . .	8
2.2 Computation of Lyapunov quantities and small limit cycles . . . . .	9
2.2.1 Computation of Lyapunov quantities in Euclidean coordinates and in the time domain .	11
2.2.2 Application of Lyapunov function to the computation of Lyapunov quantities . . . . .	19
2.2.3 Lyapunov quantities of Lienard equation . . . . .	19
2.3 Transformation between quadratic systems and Lienard equation . . . . .	21
2.4 Method of asymptotic integration for Lienard equation with discontinuous right-hand side and large limit cycles . . . . .	22
2.5 Four limit cycles for Lienard equation and the corresponding quadratic system . . . . .	24

3.	Absolute Observation Stability for Evolutionary Variational Inequalities	29
	<i>G.A. Leonov, V. Reitman</i>	
3.1	Introduction . . . . .	29
3.2	Evolutionary variational inequalities . . . . .	31
3.3	Basic assumptions . . . . .	33
3.4	Absolute observation - stability of evolutionary inequalities . . . . .	34
3.5	Application of observation stability to the beam equation . . . . .	37
4.	A Discrete-time Hybrid Lurie Type System	43
	<i>V.N. Belykh, B. Ukrainsky</i>	
4.1	Introduction . . . . .	43
4.2	Reduction to a normal form . . . . .	44
4.3	Existence of invariant domain . . . . .	45
4.4	Conditions of hyperbolicity . . . . .	48
5.	Frequency Domain Performance Analysis of Marginally Stable LTI Systems with Saturation	53
	<i>R.A. van den Berg, A.Y. Pogromsky, J.E. Rooda</i>	
5.1	Introduction . . . . .	53
5.2	LTI system with saturation . . . . .	55
	5.2.1 System description . . . . .	55
	5.2.2 Case: electromechanical system . . . . .	57
	5.2.3 Motivating example: nonlinear behavior . . . . .	58
5.3	Convergent systems and simulation-based frequency domain analysis . . . . .	60
	5.3.1 Convergent systems . . . . .	60
	5.3.2 Convergent system design . . . . .	62
	5.3.3 Performance analysis in frequency domain . . . . .	62
5.4	Frequency domain analysis based on describing function approach . . . . .	65
	5.4.1 Describing function method . . . . .	65
	5.4.2 Performance analysis example . . . . .	68
5.5	Conclusion . . . . .	69

6.	Reduction of Steady-State Vibrations in a Piecewise Linear Beam System using Proportional and Derivative Control	71
	<i>R.H.B. Fey, R.M.T. Wouters, H. Nijmeijer</i>	
6.1	Introduction . . . . .	71
6.2	Experimental set-up . . . . .	73
6.3	Steady-state behavior of the uncontrolled system . . . . .	74
6.4	Control objectives and PD controller design approach . . . . .	75
6.5	Dynamic model . . . . .	77
6.6	Effects of separate P-action and separate D-action . . . . .	79
6.7	PD control . . . . .	80
	6.7.1 Control objective 1 . . . . .	81
	6.7.2 Control objective 2 . . . . .	82
6.8	Comparison with passive control via a linear DVA . . . . .	84
6.9	Conclusions . . . . .	86
7.	Hybrid Quantised Observer for Multi-input-multi-output Nonlinear Systems	89
	<i>A.L. Fradkov, B.R. Andrievskiy, R.J. Evans</i>	
7.1	Introduction . . . . .	89
7.2	Description of state estimation over the limited-band communication channel . . . . .	91
7.3	Coding procedure . . . . .	94
7.4	Evaluation of state estimation error . . . . .	95
7.5	Example. State estimation of nonlinear oscillator . . . . .	97
7.6	Conclusions . . . . .	99
8.	Tracking Control of Multiconstraint Nonsmooth Lagrangian Systems	103
	<i>C. Morarescu, B. Brogliato, T. Nguyen</i>	
8.1	Introduction . . . . .	103
8.2	Basic concepts . . . . .	108
	8.2.1 Typical task . . . . .	108
	8.2.2 Exogenous signals entering the dynamics . . . . .	109
	8.2.3 Stability analysis criteria . . . . .	112
8.3	Controller design . . . . .	114
8.4	Tracking control framework . . . . .	115

8.4.1	Design of the desired trajectories . . . . .	115
8.4.2	Design of $q_d^*(\cdot)$ and $q_d(\cdot)$ on the phases $I_k$ . . . . .	116
8.5	Design of the desired contact force during constraint phases . . . . .	118
8.6	Strategy for take-off at the end of constraint phases $\Omega_k^J$ . . . . .	119
8.7	Closed-loop stability analysis . . . . .	120
8.8	Illustrative example . . . . .	122
8.9	Conclusions . . . . .	123
9.	Stability and Control of Lur'e-type Measure Differential Inclusions . . . . .	129
	<i>N. van de Wouw, R. I. Leine</i>	
9.1	Introduction . . . . .	130
9.2	Preliminaries . . . . .	133
9.3	Measure differential inclusions . . . . .	134
9.4	Convergent systems . . . . .	136
9.5	Convergence properties of Lur'e-type measure differential inclusions . . . . .	137
9.6	Tracking control of Lur'e-type measure differential inclusions . . . . .	142
9.7	Example of a mechanical system with a unilateral constraint . . . . .	144
9.8	Conclusions . . . . .	146
10.	Synchronization between Coupled Oscillators: An Experimental Approach . . . . .	153
	<i>D.J. Rijlaarsdam, A.Y. Pogromsky, H. Nijmeijer</i>	
10.1	Introduction . . . . .	153
10.2	Experimental set-up . . . . .	154
10.2.1	Adjustment of the systems' properties . . . . .	156
10.3	Example 1: Coupled Duffing oscillators . . . . .	156
10.3.1	Problem statement and analysis . . . . .	156
10.3.2	Experimental and numerical results . . . . .	158
10.4	Example 2: Two coupled rotary disks . . . . .	161
10.4.1	Problem statement . . . . .	161
10.4.2	Experimental results . . . . .	162
10.5	Conclusion and future research . . . . .	162

11.	Swinging Control of Two-pendulum System under Energy Constraints	167
	<i>M. S. Ananyevskiy, A.L. Fradkov, H. Nijmeijer</i>	
11.1	Introduction . . . . .	167
11.2	Control algorithm: formulation of the problem and approach . . . . .	168
11.2.1	Special case: Energy control for Hamiltonian systems . . . . .	170
11.3	Two pendulums under a single force . . . . .	172
11.3.1	Control problem formulation . . . . .	173
11.3.2	Control algorithm design . . . . .	174
11.3.3	Control algorithm analysis . . . . .	174
11.4	Conclusion . . . . .	178
12.	Two Van der Pol-Duffing Oscillators with Huygens Coupling	181
	<i>V.N. Belykh, E.V. Pankratova, A.Y. Pogromsky</i>	
12.1	Introduction . . . . .	181
12.2	Problem statement . . . . .	182
12.3	Synchronization of oscillators driven by Van der Pol control input . . . . .	185
12.4	Synchronization of oscillators driven by Van der Pol-Duffing control input . . . . .	190
12.5	Conclusions . . . . .	193
13.	Synchronization of Diffusively Coupled Electronic Hindmarsh-Rose Oscillators	195
	<i>E. Steur, L. Kodde, H. Nijmeijer</i>	
13.1	Introduction . . . . .	195
13.2	Preliminaries . . . . .	196
13.3	Synchronization of diffusively coupled Hindmarsh-Rose oscillators . . . . .	198
13.4	Experimental setup . . . . .	201
13.5	Synchronization experiments . . . . .	203
13.6	Conclusions . . . . .	208

14.	Multipendulum Mechatronic Setup for Studying Control and Synchronization	211
	<i>A.L. Fradkov, B.R. Andrievskiy, K.B. Boykov, B.P. Lavrov</i>	
14.1	Introduction . . . . .	211
14.2	Design of mechanical part . . . . .	213
14.3	Electronics of the multipendulum setup . . . . .	214
14.3.1	System for data exchange with control computer . . . . .	215
14.3.2	Architecture of the data exchange system . . . . .	216
14.3.3	Computer-process interface . . . . .	216
14.3.4	Electronic modules of the set-up . . . . .	217
14.3.5	Communications protocol . . . . .	218
14.4	Conclusions . . . . .	218
15.	High-frequency Effects in 1D Spring-mass Systems with Strongly Non-linear Inclusions	223
	<i>B.S. Lazarov, S.O. Snaeland, J.J. Thomsen</i>	
15.1	Introduction . . . . .	223
15.2	Mechanical model . . . . .	227
15.3	Band gap effects in periodic structures . . . . .	228
15.4	Approximate equations governing the slow and the fast motion . . . . .	229
15.4.1	Example 1: linear plus cubic non-linearity . . . . .	233
15.4.2	Example 2: essentially non-linear damping and restoring forces . . . . .	233
15.5	Numerical examples . . . . .	234
15.5.1	Inclusions with linear plus cubic non-linear behaviour . . . . .	235
15.5.2	Non-linear inclusions with non-local interaction . . . . .	236
15.5.3	Linear chains with non-linear damping forces . . . . .	237
15.6	Conclusions . . . . .	239
