| Dedication | v |
| Acknowledgments | vii |
| Preface | ix |
| 1. Introductory Examples of Homogenization Method | 1 |
| 1.1 Long Waves in a Layered Elastic Medium | 1 |
| 1.2 Short Waves in a Weakly Stratified Elastic Medium | 6 |
| 1.3 Dispersion of Passive Solute in Pipe Flow | 10 |
| 1.3.1 Scale Estimates | 11 |
| 1.3.2 Multiple-Scale Analysis | 12 |
| 1.3.3 Dispersion Coefficient for Steady Flow | 17 |
| 1.3.4 Dispersion Coefficient for Oscillatory Flow | 18 |
| 1.4 Typical Procedure of Homogenization Analysis | 19 |
| References | 20 |
| 2. Diffusion in a Composite | 23 |
| 2.1 Basic Equations for Two Components in Perfect Contact | 23 |
| 2.2 Effective Equation on the Macroscale | 24 |
| 2.3 Effective Boundary Condition | 29 |
| 2.4 Symmetry and Positiveness of Effective Conductivity | 33 |
| 2.5 Laminated Composites | 35 |
| 2.6 Bounds for Effective Conductivity | 38 |
| 2.6.1 First Variational Principle and the Upper Bound | 38 |

| | | |
|-----------|---|-----------|
| 2.6.2 | Dual Variational Principle and the Lower Bound | 41 |
| 2.7 | Hashin–Shtrikman Bounds | 44 |
| 2.7.1 | Results and Implications | 44 |
| 2.7.2 | Derivation of Hashin–Shtrikman Bounds | 46 |
| 2.8 | Other Approximate Results for Dilute Inclusions | 50 |
| 2.9 | Thermal Resistance at the Interface | 52 |
| 2.10 | Laminated Composites with Thermal Resistance | 58 |
| 2.10.1 | Effective Coefficients | 58 |
| 2.10.2 | Application to Thermal Barrier Coatings | 61 |
| 2.11 | Bounds for the Effective Conductivity | 63 |
| 2.11.1 | Variational Principles and Bounds | 63 |
| 2.11.2 | Application to a Particulate Composite | 66 |
| 2.12 | Chemical Transport in Aggregated Soil | 70 |
| | Appendix 2A. Heat Transfer in a Two-Slab System | 79 |
| | References | 82 |
| 3. | Seepage in Rigid Porous Media | 85 |
| 3.1 | Equations for Seepage Flow and Darcy’s Law | 85 |
| 3.2 | Uniqueness of the Cell Boundary-Value Problem | 90 |
| 3.3 | Symmetry and Positiveness of Hydraulic Conductivity | 91 |
| 3.4 | Numerical Computation of the Permeability Tensor | 92 |
| 3.5 | Seepage of a Compressible Fluid | 96 |
| 3.6 | Two-Dimensional Flow Through a Three-Dimensional Matrix | 99 |
| 3.6.1 | Governing Equations | 100 |
| 3.6.2 | Homogenization | 103 |
| 3.6.3 | Numerical Results | 107 |
| 3.7 | Porous Media with Three Scales | 109 |
| 3.7.1 | Effective Equations | 110 |
| 3.7.2 | Properties of Hydraulic Conductivity | 113 |
| 3.7.3 | Macroporosity of a Laminated Medium | 114 |
| 3.8 | Brinkman’s Modification of Darcy’s Law | 118 |
| 3.9 | Effects of Weak Fluid Inertia | 123 |
| | Appendix 3A. Spatial Averaging Theorem | 130 |
| | References | 132 |

| | |
|---|------------|
| 4. Dispersion in Periodic Media or Flows | 135 |
| 4.1 Passive Solute in a Two-Scale Seepage Flow | 135 |
| 4.1.1 The Solute Transport Equation and Scale Estimates | 136 |
| 4.1.2 Macroscale Transport Equation | 138 |
| 4.1.3 Numerical Computation of Dispersivity | 145 |
| 4.2 Macrodispersion in a Three-Scale Porous Medium | 149 |
| 4.2.1 From Micro- to Mesoscale | 151 |
| 4.2.2 Mass Transport Equation on the Macroscale | 152 |
| 4.2.3 Second-Order Seepage Velocity | 156 |
| 4.3 Dispersion and Transport in a Wave Boundary Layer Above the Seabed | 158 |
| 4.3.1 Depth-Integrated Transport Equation in the Boundary Layer | 159 |
| 4.3.2 Effective Convection Velocity | 164 |
| 4.3.3 Correlation Coefficients $\langle u_i^{(1)} C^{(1)} \rangle$ and Dispersivity Tensor | 166 |
| 4.3.4 Dispersion Under a Standing Wave in a Lake | 169 |
| Appendix 4A. Derivation of Convection–Dispersion Equation | 173 |
| Appendix 4B. An Alternate Form of Macrodispersion Tensor | 175 |
| References | 176 |
| 5. Heterogeneous Elastic Materials | 179 |
| 5.1 Effective Equations on the Macroscale | 180 |
| 5.2 The Effective Elastic Coefficients | 184 |
| 5.3 Application to Fiber-Reinforced Composite | 185 |
| 5.4 Elastic Panels with Periodic Microstructure | 186 |
| 5.4.1 Order Estimates | 189 |
| 5.4.2 Two-Scale Analysis and Effective Equations | 190 |
| 5.4.3 Homogeneous Plate — A Limiting Case | 196 |
| 5.5 Variational Principles and Bounds for the Elastic Moduli | 199 |
| 5.5.1 First Variational Principle and the Upper Bound | 199 |

| | | |
|-----------|---|------------|
| 5.5.2 | Second Variational Principle and the Lower Bound | 201 |
| 5.6 | Hashin–Shtrikman Bounds | 203 |
| 5.7 | Partially Cohesive Composites | 208 |
| 5.7.1 | Effective Equations on the Macroscale | 210 |
| 5.7.2 | Variational Principles | 212 |
| 5.7.3 | Bounds for Particulate Composites | 219 |
| 5.7.4 | Size Effects for Particulate Composites | 226 |
| 5.7.5 | Critical Radii for Particulate Composites | 227 |
| | Appendix 5A. Properties of a Tensor of Fourth Rank | 234 |
| | References | 235 |
| 6. | Deformable Porous Media | 239 |
| 6.1 | Basic Equations for Fluid and Solid Phases | 240 |
| 6.2 | Scale Estimates | 242 |
| 6.2.1 | Quasi-Static Poroelasticity | 242 |
| 6.2.2 | Dynamic Poroelasticity | 244 |
| 6.3 | Multiple-Scale Expansions | 246 |
| 6.4 | Averaged Total Momentum of the Composite | 248 |
| 6.5 | Averaged Mass Conservation of Fluid Phase | 251 |
| 6.6 | Averaged Fluid Momentum | 252 |
| 6.6.1 | Quasi-Static Case | 252 |
| 6.6.2 | Dynamic Case | 253 |
| 6.7 | Time-Harmonic Motion | 254 |
| 6.8 | Properties of the Effective Coefficients | 257 |
| 6.8.1 | Three Identities for General Media | 257 |
| 6.8.2 | Homogeneous and Isotropic Grains | 259 |
| 6.9 | Computed Elastic Coefficients | 262 |
| 6.10 | Boundary-Layer Approximation for Macroscale Problems | 263 |
| 6.10.1 | The Outer Approximation | 264 |
| 6.10.2 | Boundary-Layer Correction | 267 |
| 6.10.3 | Plane Rayleigh Wave in a Poroelastic Half Space | 272 |
| | Appendix 6A. Properties of the Compliance Tensor | 274 |
| | Appendix 6B. Variational Principle for the Elastostatic Problem in a Cell | 275 |
| | References | 276 |

| | |
|---|----------------|
| 7. Wave Propagation in Inhomogeneous Media | 279 |
| 7.1 Long Wave Through a Compact Cylinder Array | 279 |
| 7.2 Bragg Scattering of Short Waves by a Cylinder Array . . . | 286 |
| 7.2.1 Envelope Equations | 287 |
| 7.2.2 Dispersion Relation for a Detuned Wave Train . . . | 291 |
| 7.2.3 Scattering by a Finite Strip of Periodic Cylinders | 292 |
| 7.3 Sound Propagation in a Bubbly Liquid | 294 |
| 7.3.1 Scale and Order Estimates | 295 |
| 7.3.2 Near Field of a Spherical Bubble | 296 |
| 7.3.3 The Intermediate Field | 298 |
| 7.3.4 The Macroscale Equation | 300 |
| 7.4 One-Dimensional Sound Through a Weakly Random Medium | 302 |
| 7.5 Weakly Nonlinear Dispersive Waves in a Random Medium | 306 |
| 7.5.1 Envelope Equation | 306 |
| 7.5.2 Modulational Instability | 311 |
| 7.6 Harmonic Generation in Random Media | 312 |
| 7.6.1 Long Waves in Shallow Water | 313 |
| 7.6.2 Harmonic Amplitudes | 315 |
| 7.6.3 Gaussian Disorder | 319 |
| References | 321 |
| Additional References on Homogenization Theory | 325 |
| Subject Index | 327 |
