

Contents

<i>Preface</i>	vii
1. Introduction	1
1.1. Formulating the Risk Problem	3
1.2. Decision Criteria	6
1.3. Decision Making Under Risk: Fact and Fiction	8
2. Probability Theory — A Mathematical Basis for Making Decisions Under Risk and Uncertainty	10
2.1. Set Theory and Probability	13
2.2. Random Variables	15
2.3. Conditional Probability and Independence	17
2.4. Some Useful Distribution Functions	20
2.5. Expected Value, Moments, and the Moment Generating Function	28
2.6. Estimating Probability Functions	35
2.6.1. Eliciting Subjective Probability Functions	36
2.6.2. Objective Estimation of Probability Functions	37
2.6.3. Production Functions and Trends	44
2.7. Martingales and Random Walks	52
2.8. Summary	56

3. Expected Utility — The Economic Basis of Decision Making Under Risk	57
3.1. Consumption and Utility	58
3.2. Expected Utility	63
3.2.1. Intuition behind Von Neumann and Morgenstern Proof	65
3.2.2. Conceptual Structure of the Axiomatic Treatment of Numerical Utilities	67
3.2.3. Analytical Examples of Expected Utility	69
3.3. Expected Value — Variance and Expected Utility Models	73
3.4. Problems with Expected Utility	76
3.5. Summary	82
4. Risk Aversion in the Large and Small	83
4.1. Arrow–Pratt Risk Aversion Coefficient	88
4.1.1. Local Risk Aversion	88
4.1.2. Transformations of Scale for the Arrow–Pratt Absolute Risk Aversion Coefficient	90
4.2. Eliciting Risk Aversion Coefficients	95
4.2.1. Direct Elicitation of Utility Functions	95
4.2.2. Equally Likely Risky Prospect and Finding Its Certainty Equivalent (ELCE)	97
4.3. Summary	99
5. Portfolio Theory and Decision Making Under Risk	101
5.1. The Expected Value — Variance Frontier	106
5.2. A Simple Portfolio	108
5.3. A Graphical Depiction of the Expected Value–Variance Frontier	109
5.4. Mean–Variance versus Direct Utility Maximization	109

5.5.	Derivation of the Expected Value–Variance Frontier	112
5.5.1.	Derivation without a Risk-Free Asset	112
5.5.2.	Derivation with a Risk-Free Asset	119
5.6.	Summary	122
6.	Whole Farm-Planning Models	124
6.1.	Farm Portfolio Models	124
6.1.1.	Gains to Diversification Using Certainty Equivalence	128
6.1.2.	Extension to a Multiperiod Portfolio	129
6.2.	Minimize Total Absolute Deviation	131
6.3.	Focus-Loss	136
6.4.	Target MOTAD	138
6.5.	Direct Utility Maximization	139
6.6.	Discrete Sequential Stochastic Programming	141
6.7.	Chance-Constrained Programming	143
6.8.	Interpreting Shadow Values from Risk Programming Models	146
6.9.	Summary	148
7.	Risk Efficiency Approaches — Stochastic Dominance	149
7.1.	Stochastic Dominance	150
7.1.1.	The Concept of an Efficiency Criteria	151
7.1.1.1.	First-Degree Stochastic Dominance	152
7.1.1.2.	Second-Degree Stochastic Dominance	152
7.1.2.	Increasing Risk	154
7.1.2.1.	Definition Based on Unanimous Preference	157
7.1.2.2.	Mean Preserving Spread	157
7.1.2.3.	Risk Aversion with Respect to a Function	162

7.2.	Applications of Stochastic Dominance	166
7.3.	Summary	172
8.	Dynamic Decision Rules and the Value of Information	173
8.1.	Decision Making and Bayesian Probabilities	173
8.2.	Concepts of Information	177
8.3.	A Model of Information	180
8.4.	Summary	182
9.	Market Models of Decision Making under Risk	183
9.1.	Risk Equilibrium from the Consumer's Point of View	185
9.2.	The Role of the Riskless Asset	189
9.3.	Risk Equilibrium from the Firm's Perspective	190
9.3.1.	Deriving the Security Market Line	191
9.3.2.	Supply of Stocks from the Firm	193
9.3.3.	Tests of the CAPM	194
9.3.4.	Incorporating Risk using CAPM	194
9.4.	Arbitrage Pricing Theorem	196
9.4.1.	Single-Factor Model	198
9.4.2.	Two-Factor Model	200
9.5.	Empirical Applications of Capital Market Models	202
9.5.1.	Capital Asset Pricing Models	202
9.5.2.	Tests for CAPM Efficiency	204
9.5.3.	Cross-Section Regression	205
9.5.4.	Arbitrage Pricing Model	206
9.6.	Summary	208
10.	Option Pricing Approaches to Risk	209
10.1.	Introduction to Options and Futures	209
10.1.1.	Futures and the Hedge	209
10.1.2.	Options	211
10.1.3.	Option Pricing using Black–Scholes	215

10.2. Real Option Valuation	219
10.2.1. Derivation of the Value of Waiting	220
10.2.2. Application to Citrus	223
10.3. Crop Insurance	223
10.4. Summary	226
11. State Contingent Production Model: The Stochastic Production Set	227
11.1. Depicting Risk and Input Decisions in the Production Function	227
11.1.1. Estimation of Stochastic Production Functions using Quantile Regression	228
11.1.2. Developing the State-Space Representation	234
11.2. State Production Set and Input Requirement Set	237
11.3. Distance Functions and Risk Aversion	238
11.3.1. Defining the Distance Function in State-Contingency Space	238
11.3.2. Risk Aversion and Valuing States	240
11.3.3. Duality, Benefit, and Distance Functions	241
11.3.4. Defining Risk Aversion Graphically	243
11.3.5. Constant Relative and Absolute Risk Aversion	244
11.3.5.1. Risk Premium	244
11.3.5.2. Derivation of the Effort Function	246
11.4. Summary	249
12. Risk, Uncertainty, and the Agricultural Firm — A Summary and Outlook	250

Appendix A.	Measure Theory and the Justification of Random Variables	253
Appendix B.	Derivation of the Moments of the Inverse Hyperbolic Sine Distribution	257
Appendix C.	Numerical Techniques for Applied Optimization and Solution of Nonlinear Systems of Equations	265
Appendix D.	An Axiomatic Development of Expected Utility	268
Appendix E.	A GAMS Program to Select Optimal Portfolios	276
Appendix F.	R Program to Derive Optimum Portfolio with and without a Risk-Free Asset	278
Appendix G.	Program to Compute the Efficient Frontier with and without a Risk-Free Asset	281
Appendix H.	GAMS Program for the Portfolio Problem	283
	<i>Bibliography</i>	285
	<i>Index</i>	291
