# Acknowledgement

This book is the outcome of a workshop organized by the East Asian Institute (EAI) of the National University of Singapore on 27 February 2009 to share experience on existing practices on eco-cities or eco-friendly projects among scholars and practitioners in the region.

At a broader level, the workshop had intended to lend its voice to the pressing need to devise a more sustainable model of urban living, one that will take into account environmental and social needs while pursuing economic growth.

In particular, we would like to thank Professor John Wong, then Research Director and now Professorial Fellow of EAI, for conceiving the topic of this workshop. Professor John Wong further motivated us to compile the papers submitted at the workshop into a book. He also provided useful ideas that helped us to write the introductory chapter.

We would further like to thank the various contributors for drafting the papers which are compiled in this volume. Our gratitude also extends to the staff from the *World Scientific* for their strong support including editorial, design and coordinating work which has made this publication an enjoyable experience.
