<i>Foreword</i>	ix
1. Nonholonomically constrained motions	1
1.1 Newton's equations	1
1.2 Constraints	3
1.3 Lagrange-d'Alembert equations	5
1.4 Lagrange derivative	7
1.5 Hamilton-d'Alembert equations	9
1.6 Distributional Hamiltonian formulation	13
1.6.1 The symplectic distribution (H, ϖ)	13
1.6.2 H and ϖ	16
1.6.3 Distributional Hamiltonian vector field	20
1.7 Almost Poisson brackets	24
1.7.1 Hamilton's equations	24
1.7.2 Nonholonomic Dirac brackets	28
1.8 Momenta and momentum equation	33
1.8.1 Momentum functions	33
1.8.2 Momentum equations	35
1.8.3 Homogeneous functions	37
1.8.4 Momenta as coordinates	38
1.9 Projection principle	39
1.10 Accessible sets	41
1.11 Constants of motion	43
1.12 Notes	46

2.	Group actions and orbit spaces	49
2.1	Group actions	49
2.2	Orbit spaces	50
2.3	Isotropy and orbit types	52
2.3.1	Isotropy types	52
2.3.2	Orbit types	53
2.3.3	When the action is proper	54
2.3.4	Stratification by orbit types	55
2.4	Smooth structure on an orbit space	56
2.4.1	Differential structure	56
2.4.2	The orbit space as a differential space	59
2.5	Subcartesian spaces	62
2.6	Stratification of the orbit space by orbit types	64
2.6.1	Orbit types in an orbit space	64
2.6.2	Stratification of an orbit space	66
2.6.3	Minimality of \mathcal{S}	67
2.7	Derivations and vector fields on a differential space	68
2.8	Vector fields on a stratified differential space	73
2.9	Vector fields on an orbit space	74
2.10	Tangent objects to an orbit space	76
2.10.1	Stratified tangent bundle	76
2.10.2	Zariski tangent bundle	77
2.10.3	Tangent cone	77
2.10.4	Tangent wedge	78
2.11	Notes	79
3.	Symmetry and reduction	81
3.1	Dynamical systems with symmetry	81
3.1.1	Invariant vector fields	81
3.1.2	Reduction of symmetry	82
3.1.3	Reduction for a free and proper G -action	82
3.1.4	Reduction nonfree proper action	82
3.2	Nonholonomic singular reduction	84
3.3	Nonholonomic regular reduction	93
3.4	Chaplygin systems	97
3.5	Orbit types and reduction	102
3.6	Conservation laws	105
3.6.1	Momentum map	105

3.6.2	Gauge momenta	112
3.7	Lifted actions and the momentum equation	113
3.7.1	Lifted actions	113
3.7.2	Momentum equation	117
3.8	Notes	120
4.	Reconstruction, relative equilibria and relative periodic orbits	123
4.1	Reconstruction	123
4.1.1	Reconstruction for proper free actions	123
4.1.2	Reconstruction for nonfree proper actions	125
4.1.3	Application to nonholonomic systems	125
4.2	Relative equilibria	126
4.2.1	Basic properties	126
4.2.2	Quasiperiodic relative equilibria	129
4.2.3	Runaway relative equilibria	132
4.2.4	Relative equilibria for nonfree actions	133
4.2.5	Other relative equilibria	134
4.2.6	Families of quasiperiodic relative equilibria	139
4.3	Relative periodic orbits	152
4.3.1	Basic properties	152
4.3.2	Quasiperiodic relative periodic orbits	153
4.3.3	Runaway relative periodic orbits	157
4.3.4	G -action is nonfree	157
4.3.5	Other relative periodic orbits	158
4.3.6	Families of quasiperiodic relative periodic orbits	160
4.4	Notes	171
5.	Carathéodory's sleigh	173
5.1	Basic set up	173
5.1.1	Configuration space	173
5.1.2	Kinetic energy	174
5.1.3	Nonholonomic constraint	175
5.2	Equations of motion	176
5.2.1	Lagrange-d'Alembert equations	176
5.2.2	Nonholonomic Dirac brackets	177
5.2.3	Lagrange-d'Alembert in a trivialization	179
5.2.4	Almost Poisson bracket form	181
5.2.5	Distributional Hamiltonian system	183

5.3	Reduction of the E(2) symmetry	187
5.3.1	The E(2) symmetry	188
5.3.2	The momentum equation	189
5.3.3	E(2)-reduced equations of motion	192
5.4	Motion on the E(2) reduced phase space	196
5.5	Reconstruction	198
5.5.1	Relative equilibria	198
5.5.2	General motions	199
5.5.3	Motion of a material point on the sleigh	200
5.6	Notes	203
6.	Convex rolling rigid body	205
6.1	Basic set up	205
6.2	Unconstrained motion	208
6.3	Constraint distribution	210
6.4	Constrained equations of motion	215
6.4.1	Vector field on D	215
6.4.2	Computation of H and ϖ in a trivialization	218
6.4.3	Distributional vector field in a trivialization	221
6.5	Reduction of the translational \mathbb{R}^2 symmetry	222
6.5.1	The \mathbb{R}^2 -reduced equations of motion	223
6.5.2	Comparison with the Euler-Lagrange equations	224
6.5.3	The \mathbb{R}^2 -reduced distribution $\overline{H}_{\overline{D}_N}$ and the 2-form $\varpi_{\overline{D}_N}$	226
6.6	Reduction of E(2) symmetry	230
6.6.1	E(2) symmetry	231
6.6.2	E(2)-orbit space	233
6.6.3	E(2)-reduced distribution and 2-form	235
6.6.4	Reduced distributional system	240
6.7	Body of revolution	243
6.7.1	Geometric and dynamic symmetry	244
6.7.2	Reduction of the induced axial symmetry	248
6.7.3	Axially reduced equations of motion	249
6.8	Notes	262
7.	The rolling disk	265
7.1	General set up	267
7.2	Reduction of the E(2) $\times S^1$ symmetry	269

7.2.1	First $E(2)$, then S^1	270
7.2.2	First S^1 , then $E(2)$	274
7.3	Reconstruction	276
7.3.1	The $E(2)$ -reduced flow	276
7.3.2	The full motion	277
7.3.3	The S^1 -reduced flow	278
7.3.4	Geometry of the $E(2) \times S^1$ reduction map	280
7.4	Relative equilibria	283
7.4.1	The manifold of relative equilibria	283
7.4.2	One parameter groups	284
7.4.3	Angular speeds in terms of invariants	285
7.4.4	Motion of the relative equilibria	287
7.4.5	Nearly flat relative equilibria	290
7.5	A potential function on an interval	290
7.5.1	Chaplygin's equations	290
7.5.2	A conservative Newtonian system	292
7.5.3	Qualitative behavior	293
7.5.4	A special case of falling flat	295
7.6	Scaling	296
7.7	Solutions of the rescaled Chaplygin equations	298
7.7.1	The recessive solution	298
7.7.2	Asymptotics	299
7.7.3	The normalized even and odd solutions	301
7.7.4	Computation of $r(0)$ and $r'(0)$	301
7.8	Bifurcations of a vertical disk	303
7.8.1	Degenerate equilibria	303
7.8.2	Vertical degenerate relative equilibria	304
7.8.3	Normal form of the potential	306
7.8.4	Cusps of the degeneracy locus	310
7.9	The global geometry of the degeneracy locus	311
7.9.1	The circle of degenerate critical points	312
7.9.2	A global description of the degeneracy locus	315
7.10	Falling flat	319
7.10.1	When the disk does not fall flat	320
7.10.2	When the disk falls flat	322
7.10.3	Limiting behavior when falling flat	324
7.11	Near falling flat	326
7.11.1	Elastic reflection	326
7.11.2	The increase of the angles ψ and χ	328

7.11.3	Motions near falling flat	332
7.12	The bifurcation diagram	340
7.12.1	The bifurcation set \mathcal{B}	340
7.12.2	Off the bifurcation set \mathcal{B}	341
7.12.3	On a coordinate axis or in an open quadrant	343
7.12.4	Near ℓ_{\pm}	346
7.12.5	Global qualitative description of $V_{\bar{\sigma}_3, \bar{\sigma}_4}$	347
7.12.6	Global description of the orbits of $X_{\bar{\sigma}_3, \bar{\sigma}_4}$	349
7.13	The integral map	351
7.13.1	Regular values of \mathcal{I}	352
7.13.2	The global geometry of the critical value surface	353
7.14	Constant energy slices	358
7.14.1	Numerical pictures of the constant energy slices	358
7.14.2	Geometric features of the constant energy slices	362
7.14.3	Outward radial growth	362
7.14.4	The swallow tail sections	365
7.14.5	Behavior of cusp points	365
7.14.6	Over the coordinate axes in the $(\bar{\sigma}_3, \bar{\sigma}_4)$ -plane	367
7.14.7	Σ over ℓ_{\pm}	368
7.15	The spatial rotational shift	370
7.15.1	The shift	370
7.15.2	Quasiperiodic motion	371
7.15.3	The spatial rotational shift	372
7.15.4	Near elliptic relative equilibria	376
7.15.5	Nearly flat solutions	381
7.16	Notes	384
