<i>Prologue</i>	vi
<i>Dedication</i>	vii
<i>Preface</i>	ix
<i>Acknowledgments</i>	xi
<i>Acronyms and Principal Symbols</i>	xvii
1. The Maxwell Postulates and Constitutive Relations	1
1.1 From microscopic to macroscopic	1
1.2 Boundary conditions	4
1.3 Constitutive relations	7
1.4 The frequency domain	8
1.5 6–vector/6×6 dyadic notation	12
1.6 Form invariances	13
1.6.1 Time reversal	13
1.6.2 Spatial inversion	14
1.6.3 Lorentz covariance	15
1.6.4 Chiral invariance	16
1.6.5 Conjugate invariance	18
1.6.6 Energy and momentum	19
1.7 Constitutive dyadics	20
1.7.1 Constraints	20
1.7.2 Specializations	24
2. Linear Mediums	31

2.1	Isotropy	31
2.1.1	Free space	31
2.1.2	Dielectric–magnetic mediums	32
2.1.3	Isotropic chirality	33
2.2	Anisotropy	33
2.2.1	Uniaxial anisotropy	34
2.2.2	Biaxial anisotropy	35
2.2.3	Gyrotropy	38
2.3	Bianisotropy	41
2.3.1	Mediums moving at constant velocity	41
2.3.2	Uniaxial and biaxial bianisotropy	42
2.3.3	Mediums with simultaneous mirror–conjugated and racemic chirality characteristics	43
2.3.4	Faraday chiral mediums	44
2.3.5	Pseudochiral omega mediums	45
2.4	Nonhomogeneous mediums	46
2.4.1	Periodic nonhomogeneity	46
2.4.2	Gravitationally induced bianisotropy	48
3.	Spacetime Symmetries and Constitutive Dyadics	55
3.1	Point groups of classical crystallography	55
3.2	Magnetic point groups	57
3.3	Continuous point groups	65
3.4	Space groups	78
4.	Planewave Propagation	81
4.1	Uniform and nonuniform plane waves	82
4.2	Eigenanalysis	84
4.3	Reflection and refraction of plane waves	86
4.4	Uniform plane waves in isotropic mediums	88
4.4.1	Dielectric–magnetic mediums	89
4.4.2	Isotropic chiral mediums	89
4.5	Uniform plane waves in anisotropic mediums	90
4.5.1	Uniaxial mediums	90
4.5.2	Biaxial mediums	92
4.5.3	Gyrotropic mediums	94
4.6	Uniform plane waves in bianisotropic mediums	95
4.6.1	Mediums moving at constant velocity	96

4.6.2	Mediums with simultaneous mirror–conjugated and racemic chirality characteristics	97
4.6.3	Faraday chiral mediums	98
4.6.4	Beltrami fields in a bianisotropic medium	100
4.7	Plane waves in nonhomogeneous mediums	102
4.7.1	Periodic nonhomogeneity	102
4.7.2	Gravitationally affected vacuum	104
4.8	Exotic planewave phenomenons	106
4.8.1	Plane waves with negative phase velocity	107
4.8.2	Hyperbolic dispersion relations	109
4.8.3	Voigt waves	111
4.8.4	Negative reflection	116
4.8.5	Counterposition of wavevector and time–averaged Poynting vector	117
5.	Dyadic Green Functions	125
5.1	Definition and properties	125
5.2	Closed–form representations	127
5.2.1	Isotropic mediums	128
5.2.2	Uniaxial dielectric–magnetic mediums	130
5.2.3	More complex mediums	132
5.3	Huygens principle	133
5.3.1	Uniaxial dielectric–magnetic mediums	134
5.3.2	Isotropic chiral mediums	136
5.4	Eigenfunction representations	136
5.4.1	Homogeneous mediums	136
5.4.2	Nonhomogeneous mediums	138
5.5	Depolarization dyadics	139
5.5.1	Ellipsoidal shape	140
5.5.2	Spherical shape	144
5.5.3	Bianisotropic mediums	149
5.6	Connection to plasmonics	150
6.	Homogenization	155
6.1	Constituent mediums	156
6.2	Maxwell Garnett formalism	158
6.3	Bruggeman formalism	160
6.4	Strong–property–fluctuation theory	162

6.4.1	Background	162
6.4.2	Estimates of constitutive parameters	163
6.5	Extended homogenization formalisms	166
6.6	Anisotropy and bianisotropy via homogenization	168
6.7	Homogenized composite mediums as metamaterials	169
7.	Nonlinear Mediums	179
7.1	Constitutive relations	179
7.2	Homogenization	181
7.2.1	Maxwell Garnett formalism	182
7.2.2	Strong-property-fluctuation theory	183
7.3	Nonlinearity enhancement	199
7.4	Quantum electrodynamic vacuum	200
Appendix A	Dyadic Notation and Analysis	205
	<i>Epilogue</i>	207
	<i>Index</i>	209
	<i>About the Authors</i>	213
