

## CONTENTS

Preface	vii
Recent progress on the quantitative arithmetic of del Pezzo surfaces	1
<i>Tim D. Browning</i>	
Additive representation in thin sequences, VIII: Diophantine inequalities in review	20
<i>Jörg Brüdern, Koichi Kawada and Trevor D. Wooley</i>	
Recent progress on dynamics of a special arithmetic function	80
<i>Chaohua Jia</i>	
Some Diophantine problems arising from the isomorphism problem of generic polynomials	87
<i>Akinari Hoshi and Katsuya Miyake</i>	
A statistical relation of roots of a polynomial in different local fields II	106
<i>Yoshiyuki Kitaoka</i>	
Generalized modular functions and their Fourier coefficients	127
<i>Winfried Kohnen</i>	
Functional relations for zeta-functions of root systems	135
<i>Yasushi Komori, Kohji Matsumoto and Hirofumi Tsumura</i>	
A quick introduction to Maass forms	184
<i>Jianya Liu</i>	

The number of non-zero coefficients of a polynomial-solved and unsolved problems	217
<i>Andrzej Schinzel</i>	
Open problems on exponential and character sums	222
<i>Igor E. Shparlinski</i>	
Errata to “A general modular relation in analytic number theory”	243
<i>Haruo Tsukada</i>	
Bibliography on determinantal expressions of relative class numbers of imaginary abelian number fields	244
<i>Ken Yamamura</i>	
Author Index	251
