<i>Introduction</i>	xi
<i>Some Background to my Notes on Fermi's Neutron Physics Lectures (Los Alamos, 1945), by Anthony P. French</i>	xxxix
<b>Neutron Physics</b>	<b>1</b>
<i>Neutron Physics – A Course of Lectures by E. Fermi</i>	3
1. Sources of Neutrons	5
1.1 Natural Sources . . . . .	5
1.1.1 Alpha Particle Sources . . . . .	5
1.1.2 Photo-Neutron Sources . . . . .	7
1.2 Artificial Sources . . . . .	7
2. The Isotopic Chart: Nuclear Masses and Energies	9
2.1 The Isotopic Chart . . . . .	9
2.2 Energy Balance of Reactions . . . . .	10
2.3 The Binding Energies of Nuclei . . . . .	12
2.4 The Packing Fraction Curve . . . . .	12
3. The Scattering of Neutrons (Part 1)	17
3.1 General Considerations . . . . .	17
3.2 Elementary Theoretical Treatment . . . . .	19
3.2.1 Elastic Scattering . . . . .	20

3.2.2	Inelastic ( $n, n$ ) Scattering . . . . .	21
3.2.3	Inelastic ( $n, m$ ) Scattering . . . . .	21
3.2.4	Inelastic ( $n, \gamma$ ) Scattering . . . . .	22
4.	Resonance: Models of the Nucleus . . . . .	25
4.1	Resonance in Nuclear Reactions . . . . .	25
4.2	Two Models of the Nucleus . . . . .	27
5.	The Scattering of Neutrons (Part 2) . . . . .	31
5.1	The Solution of Schrödinger's Equation . . . . .	31
5.2	The Scattering Cross Section . . . . .	34
5.3	Neutron-Proton scattering . . . . .	35
5.4	The Breit-Wigner Formula . . . . .	36
5.5	The Effect of Chemical Binding on Scattering . . . . .	38
5.6	Scattering Cross Section for Other Elements . . . . .	39
6.	Slow Neutrons as Waves . . . . .	41
6.1	Introduction . . . . .	41
6.2	Isotopic Effects . . . . .	43
6.3	Penetration by Thermal Neutrons . . . . .	44
6.4	The Production of Very Slow Neutrons . . . . .	46
6.5	Reflection and Refraction . . . . .	47
7.	The Slowing Down of Neutrons . . . . .	49
7.1	Introduction . . . . .	49
7.2	The Energy Loss in One Collision . . . . .	50
7.3	Many Collisions . . . . .	52
7.4	The Spatial Distribution of Slowed Neutrons . . . . .	54
7.5	Theory of the Spatial Distribution . . . . .	58
8.	The Age Equation . . . . .	65
8.1	Derivation of the Age Equation . . . . .	65
8.1.1	Diffusion . . . . .	65
8.1.2	Energy Drift . . . . .	66
8.2	The Problem of a Point Source . . . . .	68
9.	Thermal Neutron Distributions . . . . .	71
9.1	The Basic Equation . . . . .	71

9.2	Point Source of Slow Neutrons . . . . .	72
9.3	Point Source of Fast Neutrons . . . . .	72
9.4	Bounded Media . . . . .	73
9.5	The Measurement of Diffusion Length . . . . .	76
9.6	Diffusion in Graphite . . . . .	77
9.7	Some Useful Quantities and Relationships . . . . .	80
10.	The Reflection of Neutrons . . . . .	81
10.1	Introduction . . . . .	81
10.2	Approximate Solution of the Escape Problem . . . . .	81
10.3	Exact Solution by Integral Equation Method . . . . .	82
10.4	The Albedo . . . . .	85
10.5	Measurement of the Albedo . . . . .	85
11.	The Stability of Nuclei . . . . .	87
11.1	The Binding Energy of a Nucleus . . . . .	87
11.1.1	The Liquid Drop Model . . . . .	87
11.1.2	Nuclear Composition . . . . .	88
11.1.3	Coulomb Forces . . . . .	89
11.1.4	The Odd-Even Effect . . . . .	89
11.2	Determination of Coefficients . . . . .	90
11.3	The Binding of Neutrons to Nuclei . . . . .	91
12.	Nuclear Fission . . . . .	93
12.1	The Possibility of Fission . . . . .	93
12.2	Limitations on the Occurrence of Fission . . . . .	95
12.3	The Liquid Drop Model in Fission . . . . .	97
12.4	The Particles of Fission . . . . .	99
12.5	Cross Sections for Fission and Other Processes . . . . .	102
13.	The Possibility of a Chain Reaction . . . . .	105
13.1	The Properties of Natural Uranium . . . . .	105
13.1.1	The High Energy Region . . . . .	106
13.1.2	The Thermal Region . . . . .	107
13.2	Moderators . . . . .	107
13.3	Homogeneous and Lumped Graphite Piles . . . . .	108
13.4	The Possibility of a Homogeneous Pile . . . . .	112
14.	The Heterogeneous Pile . . . . .	115

14.1	The Design of a Lumped Pile . . . . .	115
14.2	The Determination of Pile Constants . . . . .	116
14.2.1	The Magnitude of $\epsilon$ . . . . .	116
14.2.2	$(1 - f_R)$ . . . . .	116
14.2.3	Calculation of $f_T$ . . . . .	117
14.3	Reproduction Factor and Critical Size . . . . .	119
15.	The Time Dependence of a Pile . . . . .	123
15.1	The Time-Dependent Equations . . . . .	123
15.2	Evaluation of the Period . . . . .	125
16.	Practical Aspects of Pile Physics . . . . .	131
16.1	The Determination of $k$ . . . . .	131
16.2	The Study of Pile Materials . . . . .	132
16.3	Energy and Radiation Production . . . . .	133
16.4	Shielding . . . . .	134
16.5	Other Types of Piles . . . . .	136
17.	Fast Reactors . . . . .	139
17.1	Elementary Considerations . . . . .	139
17.2	The Integral Equation to the Neutron Distribution . . . . .	141
17.3	The Critical Size for a Fast Reactor . . . . .	144
17.4	Supercritical Reactors . . . . .	151
	<i>Problems and Exercises</i> . . . . .	153
	<b>Nuclear Reactors</b> . . . . .	<b>159</b>
1.	Process for the Production of Radioactive Substances <i>by E. Fermi, E. Amaldi, B. Pontecorvo, F. Rasetti and E. Segré</i> . . . . .	161
2.	Test Exponential Pile <i>by E. Fermi</i> . . . . .	181
3.	Method of Operating a Neutronic Reactor <i>by E. Fermi and L. Szilard</i> . . . . .	217
3.1	The Chain Fission Reaction . . . . .	223

3.1.1	Neutron Loss by Absorption in Uranium . . . . .	226
3.1.2	Neutron Loss by Absorption in the Moderator . . . . .	228
3.1.3	Neutron Loss by Absorption by Impurities in the System . . . . .	229
3.1.4	Exterior Neutron Loss in a Neutronic Reactor of Practical Size . . . . .	233
3.2	Measurement of Neutron Losses . . . . .	234
3.3	An Illustrative Neutronic Reactor having a Solid Moderator . . . . .	244
3.4	Graphite in the Reactor . . . . .	258
3.5	An Illustrative Neutronic Reactor having a Liquid Moderator . . . . .	262
3.6	Neutronic Reactors with Other Moderators . . . . .	269
3.7	Reduction of Losses Due to Resonance Capture . . . . .	271
3.8	Reduction of Neutron Losses Due to Impurities in the Material . . . . .	278
3.9	Effect of a Cooling System in a Neutronic Reactor . . . . .	285
3.10	An Illustrative Gas-Cooled Neutronic Reactor . . . . .	288
3.11	An Illustrative Liquid-Cooled Neutronic Reactor . . . . .	298
3.12	Use of Different Lattices in the Same Neutronic Reactor . . . . .	303
3.13	Critical and Operating Sizes of Neutronic Reactors . . . . .	307
3.14	Control of the Neutronic Reaction by Variation of Neutron Losses in or from the Neutronic Reactor . . . . .	315
3.15	Uses of Neutronic Reactors . . . . .	323
4.	Chain Reacting System <i>by E. Fermi and M.C. Leverett</i>	329
5.	Neutronic Reactor I <i>by E. Fermi</i>	379
6.	Air Cooled Neutronic Reactor <i>by E. Fermi and L. Szilard</i>	409
7.	Testing Material in a Neutronic Reactor <i>by E. Fermi and H.L. Anderson</i>	447
8.	Neutron Velocity Selector <i>by E. Fermi</i>	475

9. Neutronic Reactor II <i>by E. Fermi and L. Szilard</i>	493
10. Neutronic Reactor III <i>by E. Fermi, W.H. Zinn and H.L. Anderson</i>	513
11. Neutronic Reactor IV <i>by E. Fermi and W.H. Zinn</i>	523
12. Method of Testing Thermal Neutron Fissionable Material for Purity <i>by E. Fermi and H.L. Anderson</i>	535
13. Method of Sustaining a Neutronic Chain Reacting System <i>by E. Fermi and M.C. Leverett</i>	549
14. Neutronic Reactor Shield <i>by E. Fermi and W.H. Zinn</i>	583
<i>Appendix A: Other Documents not Reported in this Volume</i>	593
<i>Appendix B: The Complete List of Fermi's Papers</i>	621
<i>Bibliography</i>	653
