<i>Preface</i>	vii
1. Introduction	1
2. Quantum Mechanics (Revisited)	9
2.1 Linear Vector Spaces	9
2.1.1 Three-Dimensional Vectors	9
2.1.2 n -Dimensions	10
2.2 Hilbert Space	11
2.2.1 Example	11
2.2.2 Definition	12
2.2.3 Relation to Linear Vector Space	13
2.2.4 Abstract State Vector	13
2.3 Linear Hermitian Operators	14
2.3.1 Eigenfunctions	15
2.3.2 Eigenstates of Position	16
2.4 Abstract Hilbert Space	18
2.4.1 Inner Product	18
2.4.2 Completeness	19
2.4.3 Linear Hermitian Operators	19
2.4.3.1 Eigenstates	20
2.4.3.2 Adjoint Operators	20
2.4.4 Schrödinger Equation	20
2.4.4.1 Stationary States	23
2.5 Measurements	23
2.5.1 Coordinate Space	23

2.5.2	Abstract Form	25
2.5.3	Reduction of the Wave Packet	26
2.5.4	Stern-Gerlach Experiment	27
2.6	Quantum Mechanics Postulates	29
2.7	Many-Particle Hilbert Space	30
2.7.1	Simple Harmonic Oscillator	30
2.7.2	Bosons	31
2.7.3	Fermions	33
3.	Angular Momentum	35
3.1	Translations	35
3.2	Rotations	37
3.3	Angular Momentum Operator	39
3.4	Eigenvalue Spectrum	40
3.5	Coupling of Angular Momenta	46
3.6	Recoupling	53
3.7	Irreducible Tensor Operators	55
3.8	The Wigner-Eckart Theorem	57
3.9	Finite Rotations	59
3.9.1	Properties	61
3.9.2	Tensor Operators	63
3.9.3	Wigner-Eckart Theorem (Completed)	64
3.10	Tensor Products	65
3.11	Vector Model	66
4.	Scattering Theory	69
4.1	Interaction Picture	69
4.2	Adiabatic Approach	70
4.3	\hat{U} -Operator	72
4.4	\hat{U} -Operator for Finite Times	76
4.5	The S -Matrix	77
4.6	Time-Independent Analysis	79
4.7	Scattering State	83
4.8	Transition Rate	86
4.9	Unitarity	89
4.10	Example: Potential Scattering	90
4.10.1	Green's Function (Propagator)	90
4.10.2	Scattering Wave Function	92

4.10.3	T-matrix	93
4.10.4	Cross Section	93
4.10.5	Unitarity	94
5.	Lagrangian Field Theory	95
5.1	Particle Mechanics	96
5.1.1	Hamilton's Principle	96
5.1.2	Lagrange's Equations	97
5.1.3	Hamiltonian	98
5.2	Continuum Mechanics (String—a Review)	101
5.2.1	Lagrangian Density	101
5.2.2	Hamilton's Principle	102
5.2.3	Lagrange's Equation	103
5.2.4	Two-Vectors	103
5.2.5	Momentum Density	104
5.2.6	Hamiltonian Density	104
5.3	Quantization	104
5.3.1	Particle Mechanics	104
5.3.2	Continuum Mechanics (String)	106
5.4	Relativistic Field Theory	108
5.4.1	Scalar Field	109
5.4.2	Stress Tensor	111
5.4.3	Dirac Field	117
5.4.4	Noether's Theorem	120
5.4.4.1	Normal-Ordered Current	122
5.4.5	Electromagnetic Field	123
5.4.6	Interacting Fields (Dirac-Scalar)	123
6.	Symmetries	125
6.1	Lorentz Invariance	125
6.2	Rotational Invariance	126
6.3	Internal Symmetries	127
6.3.1	Isospin—SU(2)	127
6.3.1.1	Isovector	127
6.3.1.2	Isospinor	131
6.3.1.3	Transformation Law	133
6.3.2	Lie Groups	134
6.3.3	Sakata Model—SU(3)	138

6.3.3.1	Dirac Triplet	139
6.3.3.2	Scalar Octet	141
6.3.3.3	Interacting Fields (Dirac-Scalar)	142
6.4	Phase Invariance	142
6.4.1	Global Phase Invariance	142
6.4.2	Local Phase Invariance	143
6.5	Yang-Mills Theories	145
6.6	Chiral Symmetry	151
6.6.1	σ -Model	156
6.6.2	Spontaneous Symmetry Breaking	158
6.7	Lorentz Transformations	162
7.	Feynman Rules	163
7.1	Wick's Theorem	164
7.2	Example (Dirac-Scalar)	171
7.2.1	Scattering Amplitudes	172
7.2.2	Self-Energies	175
7.2.3	Vacuum Amplitude	176
7.3	Feynman Diagrams	177
7.4	Feynman Rules	180
7.5	Cancellation of Disconnected Diagrams	182
7.6	Mass Renormalization	185
8.	Quantum Electrodynamics (QED)	187
8.1	Classical Theory	187
8.2	Hamiltonian	188
8.3	Quantization	189
8.4	Photon Propagator	191
8.5	Second-Order Processes	196
8.5.1	Scattering Amplitudes	196
8.5.2	Self-Energies	198
8.6	QED With Two Leptons	200
8.7	Cross Sections	200
8.7.1	$e^- + \mu^- \rightarrow e^- + \mu^-$	200
8.7.1.1	Scattering Amplitude	201
8.7.1.2	Cross Section	201
8.7.1.3	Traces	205
8.7.1.4	Cross Section (Continued)	206

8.7.1.5	Limiting Cases	208
8.7.1.6	Møller Scattering	209
8.7.2	$e^+ + e^- \rightarrow \mu^+ + \mu^-$	210
8.7.2.1	Scattering Amplitude	210
8.7.2.2	Cross Section	211
8.7.2.3	Limiting Cases	214
8.7.2.4	Colliding Beams	214
8.8	QED in External Field	214
8.8.1	Nuclear Coulomb Field	216
8.8.2	Bremsstrahlung	217
8.8.3	Pair Production	218
8.9	Scattering Operator \hat{S}_1^{ext} in Order e^3	219
8.10	Feynman Rules for QED	221
8.10.1	General Scattering Operator	221
8.10.2	Feynman Diagrams	222
8.10.3	Feynman Rules	223
8.10.3.1	Coordinate Space	223
8.10.3.2	Momentum Space	223
9.	Higher-Order Processes	225
9.1	Example-Scattering in External Field	225
9.1.1	Feynman Diagrams	226
9.1.2	First-Order	226
9.1.3	Vertex Insertion	226
9.1.4	Vacuum Polarization	226
9.1.5	Self-Energy Insertions	227
9.2	Ward's Identity	228
9.3	Electron Self-Energy	228
9.3.1	General Form	229
9.3.2	Evaluation	230
9.3.3	Mass Renormalization	232
9.4	Vertex	234
9.4.1	General Form	234
9.4.2	Ward's Identity	235
9.4.3	Evaluation	236
9.4.4	The Constant L	238
9.4.5	The Infrared Problem	239
9.4.6	Schwinger Moment	240
9.5	External Lines and Wavefunction Renormalization	243

9.5.1	Cancellation of Divergences	247
9.6	Vacuum Polarization	247
9.6.1	Evaluation	248
9.6.2	General Form	249
9.6.3	Limiting Cases	250
9.6.4	Insertion	250
9.6.5	Charge Renormalization	252
9.6.6	Charge Strength	254
9.7	Renormalization Theory	255
9.7.1	Proper Self-Energies	255
9.7.2	Proper Vertex	256
9.7.3	Ward's Identity	257
9.7.4	Ward's Vertex Construct	259
9.7.5	Finite Parts	260
9.7.6	Proof of Renormalization	262
9.7.7	The Renormalization Group	264
10.	Path Integrals	265
10.1	Non-Relativistic Quantum Mechanics with One Degree of Freedom	265
10.1.1	General Relations	266
10.1.2	Infinitesimals	268
10.1.3	Transition Amplitude and Path Integral	270
10.1.4	Classical Limit	272
10.1.5	Superposition	272
10.1.6	Matrix Elements	273
10.1.7	Crucial Theorem of Abers and Lee	275
10.1.8	Functional Derivative	276
10.1.9	Generating Functional	279
10.2	Many Degrees of Freedom	279
10.2.1	Gaussian Integrals	280
10.3	Field Theory	282
10.3.1	Fields as Coordinates	282
10.3.2	Measure	283
10.3.3	Generating Functional	283
10.3.4	Convergence	283
10.3.4.1	Euclidicity Postulate	283
10.3.4.2	Adiabatic Damping	284
10.4	Scalar Field	285

10.4.1	Generating Functional for Free Scalar Field	285
10.4.1.1	Applications	287
10.4.2	Interactions	289
10.5	Fermions	290
10.5.1	Grassmann Algebra	290
10.5.2	Functional Derivative	291
10.5.3	Functional Integration	291
10.5.4	Integrals	292
10.5.5	Basic Results	292
10.5.6	Generating Functional for Free Dirac Field	294
10.5.6.1	Applications	296
10.5.7	Interactions (Dirac-Scalar)	297
10.6	Electromagnetic Field	298
11.	Canonical Transformations for Quantum Systems	299
11.1	Interacting Bose System	300
11.1.1	Pseudopotential	300
11.1.2	Special Role of the Ground State	301
11.1.3	Effective Hamiltonian	302
11.1.4	Bogoliubov Transformation	303
11.1.5	Discussion of Results	305
11.1.5.1	Excitation Spectrum	305
11.1.5.2	Depletion	306
11.1.5.3	Ground-State Energy	308
11.1.6	Superfluid ^4He	309
11.2	Superconductors	309
11.2.1	Cooper Pairs	309
11.2.2	Bogoliubov-Valatin Transformation	310
11.2.2.1	Pairing	310
11.2.2.2	Thermodynamic Potential	311
11.2.2.3	Wick's Theorem	312
11.2.2.4	Diagonalization of \hat{K}_0	314
11.2.2.5	Gap Equation	316
11.2.3	Discussion of Results	316
11.2.3.1	Particle Number	316
11.2.3.2	Ground-State Thermodynamic Potential	317
11.2.3.3	Ground-State Energy	318
11.2.3.4	Excitation Spectrum	318
11.2.3.5	Momentum Operator	319

11.2.3.6	Quasiparticle Spectrum	319
11.2.3.7	Calculation of the Energy Gap Δ	320
11.2.3.8	Quasiparticle Interactions	322
12.	Problems	323
Appendix A	Multipole Analysis of the Radiation Field	369
A.1	Vector Spherical Harmonics	370
A.2	Plane-Wave Expansion	373
A.3	Transition Rate	375
A.4	Arbitrary Photon Direction	379
Appendix B	Functions of a Complex Variable	383
B.1	Convergence	383
B.2	Analytic Functions	383
B.3	Integration	384
B.4	Cauchy's Theorem	385
B.5	Cauchy's Integral	385
B.6	Taylor's Theorem	387
B.7	Laurent Series	387
B.8	Theory of Residues	387
B.9	Zeros of an Analytic Function	389
B.10	Analytic Continuation	389
	B.10.1 Standard Method	390
	B.10.2 Uniqueness	391
Appendix C	Electromagnetic Field	393
C.1	Lagrangian Field Theory	394
C.2	Stress Tensor	395
C.3	Free Fields	395
C.4	Quantization	397
C.5	Commutation Relations	399
C.6	Interaction With External Current	401
	C.6.1 Hamiltonian	402
	C.6.2 Quantization	404
Appendix D	Irreducible Representations of $SU(n)$	407
D.1	Young Tableaux and Young Operators	409

D.2	Adjoint Representation	410
D.3	Dimension of the Representation	412
D.4	Outer Product	412
D.5	SU(n-1) Content of SU(n)	413
D.6	Some Examples	414
D.6.1	Angular Momentum–SU(2)	414
D.6.2	Sakata Model–SU(3)	415
D.6.3	Giant Resonances–SU(4)	417
Appendix E	Lorentz Transformations in Quantum Field Theory	419
E.1	Scalar Field	420
E.1.1	States	420
E.1.2	Lorentz Transformation	422
E.1.3	Generators	423
E.1.4	Commutation Rules	426
E.2	Dirac Field	427
E.2.1	Lorentz Transformation	427
Appendix F	Green’s Functions and Other Singular Functions	429
F.1	Commutator at Unequal Times	429
F.2	Green’s Functions	434
F.2.1	Boundary Conditions	437
F.3	Time-Ordered Products	439
F.3.1	Scalar Field	439
F.3.2	Electromagnetic Field	440
F.3.3	Dirac Field	440
F.3.4	Vector Field	442
Appendix G	Dimensional Regularization	443
G.1	Dirichlet Integral	444
G.2	Basic Relation	445
G.3	Complex n -plane	446
G.4	Algebra	447
G.5	Lorentz Metric	448
G.6	γ -Matrix Algebra	449
G.7	Examples	449
G.7.1	Convergent Momentum Integrals	450
G.7.2	Vacuum Tadpoles	450

G.7.3 Vacuum Polarization	450
Appendix H Path Integrals and the Electromagnetic Field	453
H.1 Faddeev-Popov Identity	453
H.2 Application	455
H.3 Generating Functional	457
H.4 Ghosts	458
H.5 Photon Propagator	458
Appendix I Metric Conversion	461
<i>Bibliography</i>	463
<i>Index</i>	467
