

Contents

Preface	v
Chapter 1	
Thermodynamic Systems and Properties	1
1.1 Thermodynamics	1
1.2 Systems and Surroundings	1
1.2.1 Closed-system or control-mass	2
1.2.2 Open-system or control-volume	2
1.2.3 Isolated system	2
1.3 Properties of a System	2
1.3.1 Intensive properties	3
1.3.2 Extensive properties	3
1.4 State of System	3
1.5 Some Basic Properties of Systems	3
1.5.1 Pressure	3
1.5.2 Temperature	5
1.5.3 Temperature scales	7
1.5.4 Density and specific volume	9
1.6 Macroscopic and Microscopic View Points	9
1.7 Thermodynamic Equilibrium	10
1.7.1 Quasi-equilibrium and non-equilibrium processes	10
1.8 Temperature Measurement and the Zeroth-Law	13
1.8.1 The Zeroth-law of thermodynamics	14
1.9 Worked Examples	14
Problems	38
References	42

Chapter 2

Properties of Pure Substances	43
2.1 The Pure Substance	43
2.2 Phase Equilibrium in a Pure Substance	44
2.3 Phase Diagrams	46
2.4 Independent Properties	49
2.5 Tables and Charts of Property Data: Equation of State	50
2.6 Ideal-Gas Equation of State	51
2.7 Microscopic View Point	52
2.8 Gas Laws	53
2.9 Van der Waals Equation of State	53
2.10 Worked Examples	54
Problems	84
References	87

Chapter 3

Work and Heat Interactions	88
3.1 Concept of Work in Mechanics	88
3.2 Work Interactions in Thermodynamics	90
3.2.1 Criterion for a work interaction	90
3.3 Work Done at a Moving Boundary	91
3.3.1 Pressure-volume diagram	93
3.3.2 Path dependence of work done	94
3.4 Work Done in Extending a Solid Rod	95
3.5 Work Done in Stretching a Liquid Surface	96
3.6 Systems Involving Electrical Work	96
3.7 Systems Involving Magnetic Work	97
3.8 Heat Interactions	97
3.9 Comparison of Heat and Work	98
3.10 Worked Examples	99
Problems	127
References	130

Chapter 4

The First Law of Thermodynamics	131
4.1 First Law for a Cyclic Process	131

4.2	First Law for a Change of State	133
4.2.1	An uncoupled-system	135
4.2.2	A coupled-system	137
4.3	Internal Energy – A Thermodynamic Property	138
4.4	State Postulate	140
4.5	Internal Energy and Heat Capacities	140
4.5.1	Heat capacity at constant volume	141
4.5.2	Enthalpy	142
4.5.3	Heat capacity at constant pressure	142
4.6	Properties of Ideal Gases	143
4.6.1	Internal energy, enthalpy and heat capacities of an ideal gas	144
4.6.2	Heat capacities and kinetic theory	145
4.7	Temperature Dependence of Heat Capacity	148
4.8	Internal Energy and Enthalpy of a Pure Substance	149
4.9	Worked Examples	150
	Problems	190
	References	194

Chapter 5

First Law Analysis of Open Systems	195	
5.1	Open Systems: An Example	195
5.2	General Form of First Law for Control Volumes	197
5.3	Mass Conservation Law for Control Volumes	200
5.4	Steady-Flow Energy Equation (SFEE)	201
5.5	Fluid Mass Flow Rate in a Duct	202
5.6	Some Steady-Flow Devices	203
5.6.1	Nozzles and diffusers	203
5.6.2	Turbines and compressors	205
5.6.3	Mixing chambers and heat exchangers	206
5.7	Analysis of a Transient Filling Process	207
5.8	Worked Examples	210
	Problems	246
	References	248

Chapter 6	
The Second Law of Thermodynamics	249
6.1 The Heat Engine Cycle	249
6.1.1 Efficiency of a heat engine cycle	253
6.2 The Reversed Heat Engine Cycle	254
6.2.1 Coefficient of performance of a reversed heat engine cycle	256
6.3 The Second Law of Thermodynamics	257
6.3.1 Equivalence of the Kelvin-Planck and Clausius statements	259
6.4 Reversible and Irreversible Processes	260
6.4.1 Types of irreversible processes	263
6.4.2 Reversible heat engines and thermal reservoirs	264
6.5 Some Consequences of the Second Law	264
6.5.1 Efficiency of a Carnot cycle using an ideal gas	266
6.5.2 Thermodynamic temperature scale	269
6.5.3 Cycles interacting with a single thermal reservoir	272
6.5.4 Cycles interacting with two thermal reservoirs	274
6.5.5 Cycles interacting with any number of thermal reservoirs	275
6.6 Worked Examples	278
Problems	307
References	311
Chapter 7	
Entropy	312
7.1 The Clausius Inequality and Entropy	312
7.1.1 Entropy – A thermodynamic property	313
7.1.2 The temperature-entropy diagram	316
7.1.3 The ‘ $T-ds$ ’ equation	317
7.1.4 Entropy of an ideal gas	317
7.1.5 Entropy of a pure thermal system	319
7.1.6 Entropy of a pure substance	319
7.2 Principle of Increase of Entropy	321
7.2.1 Storage, production and transfer of entropy	323
7.2.2 Entropy transfer in a heat engine	325

7.2.3 Entropy transfer in steady heat conduction	327
7.3 Limitations Imposed on Work Output by the Second Law	329
7.3.1 Helmholtz and Gibbs free energy	330
7.3.2 Availability	331
7.4 Maximum Work, Irreversibility and Entropy Production	333
7.5 Entropy, Irreversibility and Natural Processes	335
7.6 Worked Examples	338
Problems	371
References	375
Chapter 8	
Second Law Analysis of Open Systems	376
8.1 The Entropy Balance Equation	376
8.2 The Combined First and Second Laws	380
8.2.1 Availability and exergy	384
8.2.2 First law and second law efficiency	386
8.3 Worked Examples	387
Problems	422
References	425
Chapter 9	
Vapor Power Cycles	426
9.1 The Carnot Cycle Using a Vapor	426
9.2 The Rankine Cycle	429
9.2.1 Temperature-entropy and enthalpy-entropy diagrams	430
9.2.2 Analysis of the Rankine cycle	432
9.3 The Reheat Cycle	434
9.3.1 Analysis of the reheat cycle	435
9.4 The Regenerative Power Cycle	436
9.4.1 Analysis of the regenerative cycle with open-feed-heaters	438
9.4.2 Closed-feed-heaters	439
9.5 The Choice of Working Fluid	441
9.5.1 Binary vapor cycle	442
9.5.2 Analysis of the binary vapor cycle	443
9.5.3 Supercritical vapor power cycle	444

9.6	Combined-Heat and Power (CHP) Cycles	444
9.7	Deviations Between Actual and Ideal Cycles	446
9.8	Simplified Second Law Analysis of Power Cycles	448
9.9	Worked Examples	450
	Problems	489
	References	493
Chapter 10		
Gas Power Cycles		494
10.1	Internal-Combustion Engine Cycles	494
	10.1.1 Spark-ignition (SI) engines	494
	10.1.2 Compression-ignition (CI) engines	496
10.2	Air Standard Cycles	498
	10.2.1 Analysis of the Otto cycle	498
	10.2.2 Analysis of the Diesel cycle	500
	10.2.3 The dual cycle	502
10.3	Gas Turbine Engine Cycles	503
	10.3.1 Analysis of the Brayton cycle	504
	10.3.2 Gas turbine cycle with regeneration	508
	10.3.3 Analysis of the ideal regeneration cycle	510
10.4	Gas Turbine Cycles with Intercooling and Reheating	511
	10.4.1 Staged-compression with intercooling	511
	10.4.2 Multi-staged expansion with reheating	514
	10.4.3 The Ericsson cycle	515
10.5	Air-Standard Cycles for Jet propulsion	516
10.6	Idealizations in Air-Standard Cycles	517
10.7	Worked Examples	519
	Problems	546
	References	549
Chapter 11		
Refrigeration Cycles		550
11.1	The Reversed-Carnot Cycle Using a Vapor	550
11.2	The Vapor Compression Cycle	553
	11.2.1 Analysis of the vapor compression cycle	557
	11.2.2 Actual vapor compression cycle	558

11.3	Modifications to the Vapor Compression Cycle	559
11.3.1	Two-stage compression with flash inter-cooling	560
11.3.2	Two-stage compression with two evaporators	562
11.4	Refrigerants for Vapor Compression Systems	562
11.5	The Vapor Absorption Cycle	563
11.5.1	The three-heat-reservoir model	565
11.5.2	Analysis of the actual absorption cycle	566
11.5.3	Equilibrium of water-LiBr mixtures	566
11.6	The Air-Standard Refrigeration Cycle	568
11.6.1	The air-standard refrigeration cycle with a heat exchanger	569
11.7	Worked Examples	570
	Problems	596
	References	599
Chapter 12		
Gas and Gas-Vapor Mixtures		600
12.1	Mixtures of Gases	600
12.1.1	Mass-fraction and mole-fraction	601
12.1.2	Partial pressure and partial volume	602
12.1.3	Dalton's rule for ideal gas mixtures	603
12.1.4	Amagat-Leduc rule for ideal gas mixtures	604
12.1.5	Properties of ideal gas mixtures	605
12.1.6	Real gas mixtures	606
12.2	Mixtures of Ideal Gases and Vapors	607
12.2.1	Mixtures of air and water vapor	608
12.2.2	Relative humidity and humidity ratio	610
12.2.3	The psychrometric chart	612
12.2.4	Adiabatic saturation and wet-bulb temperature	615
12.3	Processes of Air-Vapor Mixtures	618
12.3.1	Cooling, dehumidification and heating	619
12.3.2	Evaporative cooling	621
12.3.3	Cooling towers	623
12.4	Worked Examples	625
	Problems	653
	References	655

Chapter 13	
Reactive Mixtures	657
13.1 Chemical Reactions of Fuels	657
13.1.1 Mass balance for a combustion reaction	658
13.2 Energy Balance for a Combustion Process	660
13.2.1 Enthalpy and internal energy of formation	661
13.2.2 Internal energy and enthalpy of reactants and products	663
13.2.3 Heats of reactions and heating values	665
13.2.4 Adiabatic flame temperature	666
13.3 Second Law Analysis of Combustion Processes	667
13.4 Chemical Equilibrium	669
13.4.1 Reactions in ideal-gas mixtures	670
13.4.2 Dissociation	673
13.5 Worked Examples	673
Problems	701
References	703
Index	705
