Preface v

Energy Loss in a Strongly Coupled Thermal Medium and the Gauge-String Duality 1

S. S. Gubser, S. S. Pufu, F. D. Rocha and A. Yarom

1. Introduction	1
2. The Thermal Medium as a Black Hole	2
3. The Trailing String	4
4. The Magnitude of the Drag Force	8
5. The Perturbed Einstein Equations	13
5.1. Metric perturbations in axial gauge	16
5.2. Boundary conditions	22
5.3. The boundary stress-energy tensor	24
6. Asymptotics	28
6.1. Long distance asymptotics	29
6.2. Short distance asymptotics	33
7. Numerical Results for the Holographic Stress Tensor	38
8. Hadronization, Jet-Broadening, and Jet-Splitting	42
9. Conclusions	51
Appendix A. Notation	52

Quarkonium at Finite Temperature 61

A. Bazavov, P. Petreczky and A. Velytsky

1. Introduction	61
2. pNRQCD at Finite Temperature	62
3. Basics of Lattice Gauge Theory	64
4. Correlation Functions of Static Quarks in Lattice Gauge Theory	66
4.1. Static meson correlators	66
4.2. Lattice results on static meson correlators	69
4.3. Color singlet correlator in SU(2) gauge theory at low temperatures	71
4.4. Color singlet free energy in the deconfined phase	74
4.5. Color adjoint free energy	76
5. Quarkonium Spectral Functions	78
5.1. Meson correlators and spectral functions	78

5.2. Lattice formulations for charmonium physics	80
5.3. Bayesian analysis of meson correlators	82
5.4. Charmonium spectral functions at zero temperature	83
5.5. Charmonium correlators at finite temperature	86
5.6. Charmonium spectral functions at finite temperature	91
5.7. Charmonium correlators and spectral functions at finite momenta	94
5.8. Bottomonium spectral functions at zero temperature	95
5.9. Bottomonium at finite temperature	97
5.10. Zero modes contribution	99
6. Potential Models at Finite Temperature	103
7. Conclusion	105

Heavy Quarks in the Quark-Gluon Plasma 111

R. Rapp and H. van Hees

1. Introduction	111
2. Heavy-Quark Interactions in QCD Matter	117
2.1. Heavy-quark diffusion in the quark-gluon plasma	119
2.2. Perturbative QCD approaches	122
2.3. Non-perturbative interactions	128
2.4. String theoretical evaluations of heavy-quark diffusion	139
2.5. Comparison of elastic diffusion approaches	141
2.6. Collisional versus radiative energy loss	144
2.7. <i>D</i> mesons in the hadronic phase	147
3. Heavy-Quark Observables in Relativistic Heavy-Ion Collisions	149
3.1. Relativistic Langevin simulations	150
3.2. Background medium in heavy-ion collisions	153
3.3. Initial conditions and hadronization	156
3.4. Model comparisons of heavy-quark spectra at RHIC	159
3.5. Heavy-meson and electron observables	166
3.6. Viscosity?	172
4. Heavy Quarkonia in Medium	174
4.1. Spectral properties of quarkonia in the QGP	176
4.2. Quarkonium production in heavy-ion collisions	185
5. Conclusions	197

Viscous Hydrodynamics and the Quark Gluon Plasma 207

D. A. Teaney

1. Introduction	207
1.1. Experimental overview	207
1.2. An interpretation of elliptic flow	209
2. Elliptic Flow — Measurements and Definitions	210

2.1. Measurements and definitions	210
2.2. Interpretation	214
2.3. The eccentricity and fluctuations	216
2.4. Summary	218
3. The Shear Viscosity in QCD	218
4. Hydrodynamic Description of Heavy Ion Collisions	223
4.1. Ideal hydrodynamics	224
4.2. Ideal Bjorken evolutions and three dimensional estimates	224
4.3. Viscous Bjorken evolution and three dimensional estimates	230
4.4. The applicability of hydrodynamics and η/s	231
4.5. Time evolution	232
4.6. Second order hydrodynamics	234
4.7. Summary	239
5. Kinetic Theory Description	240
6. Viscous Hydrodynamic Models of Heavy Ion Collisions	244
6.1. Initial conditions	246
6.2. Corrections to the hydrodynamic flow	247
6.3. Convergence of the gradient expansion	249
6.4. Kinetic theory and hydrodynamic simulations	250
6.5. Particle spectra	255
7. Summary and Outlook	260

Hadron Correlations in Jets and Ridges Through Parton Recombination

267

R. C. Hwa

1. Introduction	267
2. Hadronization by Recombination	269
2.1. A historical perspective	269
2.2. Shower partons	272
2.3. Parton distributions before recombination	274
3. Large Baryon/Meson Ratios	275
3.1. Intermediate p_T in heavy-ion collisions	275
3.2. Cronin effect	278
3.3. Forward production in dAu collisions	280
3.4. Forward production in $AuAu$ collisions	282
3.5. Recombination of adjacent jets at LHC	283
4. Ridgeology Phenomenology of Ridges	284
4.1. Experimental features of ridges	285
4.2. Recombination of enhanced thermal partons	288
4.3. Trigger from the ridge	290
4.4. Dependence of ridge formation on trigger azimuth	292
5. Azimuthal Anisotropy	296

5.1. Effects of ridge formation at low p_T	296
5.2. Effects of shower partons at intermediate p_T	299
5.3. Breaking of quark number scaling	301
6. Hadron Correlation in Dijet Production	302
6.1. Distribution of dynamical path length	302
6.2. Near-side and away-side yields per trigger	305
6.3. Medium effects on dijets	307
6.4. Symmetric dijets and tangential jets	311
6.5. Unsymmetric dijets and tomography	312
7. Conclusion	314

Elliptic Flow: A Study of Space-Momentum Correlations in Relativistic Nuclear Collisions **323**

P. Sorenson

1. Introduction	323
1.1. Two decades in time and five decades in beam energy	326
1.2. Initial geometry: the reaction plane and eccentricity	327
2. Review of Recent Data	332
2.1. Differential elliptic flow	335
2.2. High p_T	339
2.3. Multiply strange hadrons and heavy flavor	343
2.4. Fluctuations and correlations	346
2.5. Scaling observations	351
3. Confronting the Hydrodynamic Paradigm with RHIC Data	359
3.1. Transport model fits	362
3.2. Viscous hydrodynamics	364
3.3. Fluctuating initial conditions	366
3.4. Addressing uncertainties	368
4. Summary	368

Predictions for the Heavy-Ion Programme at the Large Hadron Collider **375**

N. Armesto

1. Introduction	375
2. Qualitative Expectations	379
3. Bulk Observables	389
3.1. Multiplicities	389
3.2. Collective flow	395
3.3. Hadrochemistry at low transverse momentum	399
3.4. Correlations	403
3.5. Fluctuations	405

4. Hard and Electromagnetic Probes	406
4.1. Particle production at large transverse momentum and jets	407
4.2. Heavy quarks and quarkonia	414
4.3. Photons and dileptons	421
5. pA Collisions	425
6. Summary and Discussion	428
