Preface to the Second Edition	v
Preface to the First Edition	vii
Introduction	1
1 Lorentz and Poincaré Group, $SL(2, \mathbb{C})$, Dirac and Majorana Spinors	7
1.1 The Lorentz Group	7
1.2 The Poincaré Group	21
1.3 $SL(2, \mathbb{C})$, Dotted and Undotted Indices	32
1.3.1 Spinor Algebra	32
1.3.2 Calculations with Spinors	48
1.3.3 Connection between $SL(2, \mathbb{C})$ and L_+^\uparrow	53
1.3.4 The Fierz-Reordering Formula	64
1.3.5 Further Calculations with Spinors	65
1.3.6 Higher Order Weyl Spinors and their Representations	78
1.4 Dirac and Majorana Spinors	83
1.4.1 The Weyl Basis or Chiral Representations	85
1.4.2 The Canonical Basis or Dirac Representation	92
1.4.3 The Majorana Representation	95
1.4.4 Charge Conjugation, Dirac and Weyl Representations	101
1.4.5 Majorana Spinors	109
1.4.6 Calculations with Dirac Spinors	112
1.4.7 Calculations with Majorana Spinors	114
2 No-Go Theorems and Graded Lie Algebras	117
2.1 The Theorems of Coleman-Mandula and Haag, Lopuszański, Sohnius	117
2.1.1 The Theorem of Coleman–Mandula	117
2.1.2 The Theorem of Haag, Lopuszański and Sohnius	119

2.2	Graded Lie Algebras	121
2.2.1	Lie Algebras	121
2.2.2	Graded Algebras	123
2.2.3	Graded Lie Algebras	123
2.3	The Graded Lie Algebra of $SU(2, \mathbb{C})$	125
2.4	\mathbb{Z}_2 Graded Lie Algebras	131
2.5	Graded Matrices	139
3	The Supersymmetric Extension of the Poincaré Algebra	147
3.1	Four-Component Dirac Formulation	147
3.2	Two-Component Weyl Formulation	161
4	Representations of the Super-Poincaré Algebra	163
4.1	Casimir Operators	163
4.2	Classification of Irreducible Representations	172
4.2.1	$N = 1$ Supersymmetry	172
4.2.2	$N > 1$ Supersymmetry	180
5	The Wess-Zumino Model	185
5.1	The Lagrangian and the Equations of Motion	185
5.2	Symmetries	187
5.3	Plane Wave Expansions	194
5.4	Projection Operators	205
5.5	Anticommutation Relations	209
5.6	The Energy-Momentum Operator of the Wess-Zumino Model	222
5.6.1	The Hamilton Operator	225
5.6.2	The Three-Momentum P_i	232
5.7	Infinitesimal Supersymmetry Transformations	235
6	Superspace Formalism and Superfields	243
6.1	Superspace	243
6.2	Grassmann Differentiation	246
6.3	Supersymmetry Transformations in the Weyl Formalism . . .	250
6.3.1	Finite Supersymmetry Transformations	250
6.3.2	Infinitesimal Supersymmetry Transformations and Dif- ferential Operator Representations of the Generators .	256
6.4	Consistency with the Majorana Formalism	262
6.5	Covariant Derivatives	264
6.6	Projection Operators	271
6.7	Constraints	278
6.8	Transformations of Component Fields	279

7	Constrained Superfields and Supermultiplets	287
7.1	Chiral Superfields	287
7.2	Vector Superfields, Generalized Gauge Transformations . . .	300
7.3	The Supersymmetric Field Strength	306
8	Supersymmetric Lagrangians	317
8.1	Grassmann Integration	317
8.2	Lagrangians and Actions	323
8.2.1	Construction of Lagrangians from Scalar Superfields .	323
8.2.2	Construction of Lagrangians from Vector Superfields .	332
8.2.3	Remarks	340
9	Spontaneous Breaking of Supersymmetry	343
9.1	The Superpotential	343
9.2	Projection Technique	347
9.3	Spontaneous Symmetry Breaking	364
9.3.1	The Goldstone Theorem	367
9.3.2	Remarks on the Wess–Zumino Model	371
9.4	The O’Raifeartaigh Model	372
9.4.1	Spontaneous Breaking of Supersymmetry	372
9.4.2	The Mass Spectrum of the O’Raifeartaigh Model . . .	377
10	Supersymmetric Gauge Theories	387
10.1	Minimal Coupling	387
10.2	Super Quantum Electrodynamics	395
10.3	The Fayet–Iliopoulos Model	400
10.4	Supersymmetric Non-Abelian Gauge Theory	412
	Bibliography	423
	Index	433
