

CONTENTS

Preface	xi
Acknowledgments	xvii
Introduction	xix
1. Fibrillation	1
1.1 Definition	1
1.2 Mechanisms	4
1.2.1 Reentry	4
1.2.2 Multiple Ectopic Foci	8
1.2.3 Rotor Theory	9
1.3 Causes	12
1.3.1 Setting	12
1.3.2 Type of Disturbance	13
1.4 Types of Fibrillation	14
1.4.1 Etiology	14
1.4.2 Localization	15
1.4.3 Characteristics	19
1.5 Clinical and Surgical Significance	21
1.6 Fibrillation Variables	22
1.6.1 Electrophysiological Variables	22
1.6.2 Metabolic Variables	23
1.6.3 Myocardial Mass	23
1.7 Electrical Fibrillation Thresholds (EFTs)	27
1.7.1 Definition	27
1.7.2 Methods of Stimulation	28
1.7.3 Vulnerable Period	28
1.8 Conclusions and Review Questions	34
2. Defibrillation	39
2.1 Definition and Early Developments	40
2.2 Chemical Defibrillation	42

2.3	Electrical Defibrillation	44
2.3.1	Transventricular or Direct	44
2.3.2	Transthoracic or Indirect	46
2.4	Defibrillation Variables, Thresholds, and Concept of Dose .	46
2.4.1	Physiological Variables	47
2.4.2	Technological Variables	62
2.4.3	Defibrillation Thresholds	68
2.4.4	Concept of Defibrillation Dose	70
2.5	Cardiopulmonary Resuscitation (CPR)	73
2.6	Cardioversion or Atrial Defibrillation	76
2.7	Are there other methods? Ablation	77
2.8	Conclusions and Review Questions	79
3.	Defibrillators	83
3.1	Introduction	83
3.2	Characterization	84
3.2.1	Technological Aspects	85
3.2.2	Functional Aspects	86
3.2.3	Implantable Defibrillators	88
3.2.4	Generator Types	93
3.3	Pacemakers	108
3.4	Defibrillator Analyzers	110
3.5	Conclusions and Review Questions	110
4.	Ventricular Fibrillation Detection	115
4.1	Introduction	115
4.2	Algorithms for the Detection of Ventricular Fibrillation (VF)	119
4.2.1	Probability Density Function (PDF)	119
4.2.2	Threshold Crossing Intervals (TCI)	121
4.2.3	Cardiac Frequency (CF)	122
4.2.4	Signal Morphology (SM) or Correlation Waveform Analysis (CWA)	125
4.2.5	Time-Frequency Analysis (TFA)	126
4.2.6	Wavelet Transform (WT)	129
4.2.7	Phase Space Analysis (PSA)	132
4.3	Discussion	134
4.4	Conclusions and Review Questions	137

5. Electrodes and Pastes	139
5.1 Introduction	139
5.2 Electrode/Tissue Impedance and the Biological Load Impedance	140
5.2.1 The Electrode–Electrolyte Interface Impedance (EEI)	140
5.2.2 The Biological Load Impedance	144
5.3 Electrode Types	152
5.4 Pastes	157
5.5 Failures	158
5.6 Conclusions and Review Questions	160
6. Safety and Efficacy	163
6.1 Introduction	164
6.2 Safety Levels: Patient, Operator, and Equipment	165
6.3 Isolation	165
6.4 Electromagnetic Interference (EMI)	167
6.5 Standards	171
6.6 Pain	172
6.6.1 Evidence of the Sensation	172
6.6.2 Causes	174
6.6.3 Proposed Measures to Prevent it	176
6.7 Efficacy	178
6.7.1 Leads	179
6.7.2 Pulse Waveform (Monophasic or Polyphasic)	181
6.7.3 Pulse Duration	183
6.7.4 Safety Margin (in Terms of Energy or Current)	184
6.8 Conclusions and Review Questions	186
7. Theoretical Models	189
7.1 Introduction	190
7.2 Non-linear Microscopic Models of Cardiac Dynamics	197
7.3 Non-linear Dynamics and the Onset of Fibrillation	204
7.4 Extended Models and Connection with Sustained Fibrillation	209
7.5 Statistical Analysis	216
7.5.1 To Begin With	216
7.5.2 Lyapunov Exponents	220
7.5.3 Dimensions and Entropies	221

7.6	Discussion	223
7.7	Conclusions and Review Questions	226
8.	Final Discussion, Overall Conclusions, and Looking Ahead	229
	References	243
	About the Authors	269
	Index	273
