

Contents

Preface	vii
1. State of Matter. Properties of Gases	1
1.1. State of Matter	1
1.2. Description of Some States of Matter	2
1.3. Units	2
1.4. Ideal or Perfect Gas Law	3
1.5. Evaluation of the Gas Constant, R	3
1.6. Mixtures of Gases	4
1.7. The Kinetic Theory of Gases	5
1.8. Molecular Collisions	7
1.9. Diffusion of Gases. Graham's Law	8
1.10. Molecular Basis of Graham's Law	9
1.11. Real Gases	10
2. The First Law of Thermodynamics	11
2.1. Classification	11
2.2. System and Surrounding	12
2.3. Work and Heat	12
2.4. Measurement of Work	13
2.5. Reversible Process	14
2.6. Measurement of Heat	14
2.7. Internal Energy	15
2.8. Exact and Inexact Differentials	16
2.9. Relation of ΔU to q_V (q at constant volume)	17
2.10. Heat Capacity	18

2.11.	Enthalpy Changes in Chemical Reactions	18
2.12.	Standard Enthalpy	18
2.13.	Variation of Enthalpy with Temperature	19
3.	The Second Law of Thermodynamics	20
3.1.	Statements of the Second Law	21
3.2.	Carnot Cycle	22
3.3.	Engine Efficiency	22
3.3.1.	Reversible Process	24
3.3.2.	Irreversible Process	25
3.3.3.	General Changes in Entropy	26
3.3.4.	Isolated Systems	27
3.4.	Determination of Entropy	27
3.4.1.	Entropy change in Phase Transitions (solid–liquid, liquid–vapor, solid–vapor)	27
3.4.2.	Entropy change in (Ideal) Gas Expansion	28
4.	The Third Law of Thermodynamics	29
4.1.	Standard Entropy	30
4.2.	Molecular Interpretation of Entropy	30
4.3.	The Surroundings	31
4.4.	The Entropy of the Surroundings	32
5.	The Free Energy Functions	33
5.1.	The Gibbs Free Energy	33
5.2.	Free Energy Changes in Chemical Reactions	35
5.3.	Variation of G with T and P	37
5.4.	Generalization of the Free Energy. Activity	37
5.5.	Partial Molar, Molal Quantities	38
5.6.	The Chemical Potential	39
5.7.	Relation of ΔG° to the Equilibrium Constant, K	40
5.8.	Variation of K with T	41
6.	Phase and Chemical Equilibria	43
6.1.	Phase Equilibrium	43
6.1.1.	The Phase Rule	43
6.1.2.	The Clapeyron Equation	44

6.2.	Chemical Equilibrium. Mixtures	46
6.2.1.	Ideal Solutions. Raoult's Law	46
6.2.2.	Ideal Dilute Solutions. Henry's Law	47
6.2.3.	Colligative Properties	49
6.2.4.	Elevation of Boiling Point. Depression of Freezing Point	49
6.2.5.	Osmotic Pressure	52
6.2.6.	Chemical Reaction Equilibria	54
6.2.7.	Elements of Electrochemistry. Electrochemical Cells	56
6.2.8.	Half-Reactions. Redox Reactions	57
6.2.9.	Cells at Equilibrium	58
7.	Chemical Kinetics	60
7.1.	The Rates of Reactions	60
7.2.	Order of Reaction	61
7.3.	Units of the Reaction Rate Constant, k	62
7.4.	Determination of the Rate Law	63
7.4.1.	Isolation Method	63
7.4.2.	Initial Rate Method	63
7.5.	Integrated Rate Law	64
7.5.1.	First-Order Reaction	64
7.6.	Half-Lives	66
7.7.	Other Reaction Orders	67
7.7.1.	Zero-Order Reactions	67
7.7.2.	Third-Order Reactions	67
7.8.	Concentration of Products	68
7.9.	Temperature-Dependent Reaction Rates. The Arrhenius Equation	69
7.10.	Reaction Rate Theories	70
7.10.1.	Collision Theory	71
7.10.2.	Activated Complex Theory	72
7.11.	Rate Law Mechanisms	73
7.12.	The Steady State Approximation	74
7.13.	The Rate-Determining Step (or Equilibrium) Approximation	76

7.14.	Unimolecular Reactions	77
7.14.1.	The Lindemann Mechanism	77
7.15.	Chain Reactions	79
8.	Introduction to Quantum Theory	82
8.1.	Historical Development	82
8.2.	Failure of Classical Theories	83
8.2.1.	Black-Body Radiation	83
8.2.2.	Photo-Electric Effect	84
8.2.3.	Heat Capacity of Solids	85
8.2.4.	Wave or Particle?	86
8.3.	The Rutherford Atom	86
8.4.	The Bohr Theory of the Hydrogen Atom	88
8.5.	Louis de Broglie	89
8.6.	The Schrödinger Equation	92
8.7.	Summary and Conclusions	93
8.8.	Schrödinger's Cat	94
9.	Applications of Quantum Theory	97
9.1.	Translational Motion. Particle-in-a-Box	97
9.2.	Hydrogenic Atoms (H, He ⁺ , Li ²⁺ , etc.)	98
9.3.	One-Electron Wave-Functions	99
9.4.	Ionization Energy	99
9.5.	Shells and Subshells	99
9.6.	Shapes of Orbitals	100
9.7.	Electron Spin	101
9.8.	Structure, Transitions and Selection Rules	102
9.9.	Many-Electron Atoms	102
9.10.	Pauli Exclusion Principle	102
9.11.	Selection Rules for Spectroscopic Transitions	103
10.	Quantum Theory. The Chemical Bond	104
10.1.	Valence Bond Theory	105
10.2.	Polyatomic Molecules	107
10.3.	Molecular Orbital Theory	108
10.4.	Bonding and Anti-bonding Orbitals	109

10.5.	Bond Order	111
10.6.	Polar Covalent Molecules	112
10.7.	Structure of Polyatomic Molecules	113
10.8.	Normalization. Normal Constants	113
10.9.	Normalization Molecules (MO)	113
11.	Elements of Molecular Spectroscopy	115
11.1.	Vibration–Rotation Spectra of Diatomic Molecules	115
11.2.	Rotational Selection Rules	115
11.3.	Vibrational Selection Rules	116
11.4.	Further Requirements	116
11.5.	Pure Rotational Spectra	117
11.6.	Vibration–Rotation Spectra	117
12.	Elements of Intermolecular Forces	120
12.1.	Types of Intermolecular Forces	120
12.1.1.	Electrostatic Forces	120
12.1.2.	van der Waals Forces	121
12.2.	Hydrogen Bonding	122
12.3.	Intermolecular Forces and Liquid Properties	123
12.4.	Properties of Liquids	124
12.5.	Classification of Solids by Types of Intermolecular Forces	125
Appendix A:	Homework Problem Sets	127
	Problem Set I. Chapter 1	127
	Problem Set II. Chapter 2	128
	Problem Set III. Chapters 3, 4, 5	129
	Problem Set IV. Chapter 6	130
	Problem Set V. Chapter 7	132
	Problem Set VI. Chapters 8, 9	134
	Problem Set VII. Chapters 10, 11, 12	135
Appendix B:	Thermodynamic Data	137
Appendix C:	Standard Reduction Potentials	139
Index		141
