

# Contents

<b>Preface</b>	v
<b>Structure of the book</b>	viii
<b>Chapter 1. Irrationality and diophantine approximation</b>	
1.1 Irrationality of $\sqrt{d}$ .....	1
1.2 Irrationality of $e$ .....	2
1.3 Irrationality of $\pi$ .....	3
1.4 Irrationality of the values of the Tschakaloff function .....	3
1.5 Diophantine approximation.....	5
1.6 Methodological remarks.....	8
Exercises .....	8
<b>Chapter 2. Representations of real numbers by infinite series and products</b>	
2.1 $p$ -adic expansion of a real number .....	11
2.2 Expansion of a real number in Engel series .....	14
2.3 Cantor infinite product .....	15
Exercises .....	17
<b>Chapter 3. Continued fractions</b>	
3.1 Introduction .....	21
3.2 A criterion of convergence.....	24
3.3 How to divide by zero .....	27
3.4 Expansion in continued fraction in $\Sigma$ .....	28
3.5 A quotient of Bessel functions .....	30
3.6 Continued fractions and irrationality.....	32
Exercises .....	35

**Chapter 4. Regular continued fractions**

4.1 Regular continued fraction expansion of a positive real number ...	39
4.2 The regular continued fraction expansion of $e$ .....	43
4.3 The diophantine equation $ax + by = c$ .....	44
4.4 Regular continued fractions and diophantine approximation.....	45
4.5 Quadratic irrational numbers and continued fractions .....	47
4.6 Pell's equation.....	50
Exercises .....	53

**Chapter 5. Quadratic fields and diophantine equations**

5.1 Quadratic fields .....	57
5.2 Ring of integers of a quadratic field.....	58
5.3 Units of the ring of integers of a quadratic field .....	60
5.4 Unique factorization theorem in $\mathbb{Z}$ .....	63
5.5 Primes and irreducibles .....	66
5.6 Euclidean domains .....	68
5.7 Diophantine equations.....	70
Exercises .....	73

**Chapter 6. Squares and sums of squares**

6.1 Sums of two squares.....	77
6.2 Finite algebraic structures .....	79
6.3 Legendre symbol.....	81
6.4 Computations in $\mathbb{F}_p^*$ .....	86
6.5 Binary quadratic forms with integer coefficients .....	88
6.6 Sums of four squares .....	93
Exercises .....	95

**Chapter 7. Arithmetical functions**

7.1 Ordinary generating function .....	99
7.2 Lambert series .....	102
7.3 Jacobi's triple product identity.....	104
7.4 Sums of two squares.....	106
7.5 Jacobi's theorem on sums of four squares.....	108
7.6 Euler function $\varphi(n)$ .....	108
7.7 Average order of $r_2(n)$ .....	110
7.8 The series of primes: the function $\pi(n)$ .....	111
Exercises .....	115

**Chapter 8. Padé approximants**

8.1 Introduction ..... 121

8.2 Gauss hypergeometric function  
and Padé approximants of the binomial function ..... 122

8.3 Confluent hypergeometric functions  
and Padé approximants of the exponential function ..... 125

8.4 Arithmetical applications ..... 126

Exercises ..... 129

**Chapter 9. Algebraic numbers and irrationality measures**

9.1 Algebraic numbers ..... 134

9.2 Algebraic integers ..... 136

9.3 Transcendental numbers and Liouville’s theorem ..... 139

9.4 Irrationality measures ..... 141

9.5 Diophantine equations and irrationality measures ..... 144

9.6 The theorems of Thue and Roth ..... 147

Exercises ..... 148

**Chapter 10. Number fields**

10.1 Algebraic number fields ..... 153

10.2 Conjugates, norms and traces ..... 156

10.3 Ring of integers of a number field ..... 158

10.4 Units ..... 160

10.5 Discriminants and integral basis ..... 163

10.6 Fermat’s equation  $x^5 + y^5 = z^5$  ..... 167

Exercises ..... 170

**Chapter 11. Ideals**

11.1 Fractional ideals and ideals of a number field ..... 174

11.2 Arithmetic in  $\mathcal{J}(\mathbb{A}_{\mathbb{K}})$  ..... 176

11.3 Norm of an ideal ..... 178

11.4 Factorization of  $\langle p \rangle$ ,  $p$  prime, as a product of prime ideals ..... 182

11.5 Class group and class number ..... 185

11.6 Application to Mordell’s equation  $y^2 = x^3 + k$  ..... 188

Exercises ..... 190

**Chapter 12. Introduction to transcendence methods**

12.1 Algebraic and transcendental functions ..... 195

12.2 House of an algebraic integer ..... 197

12.3 Mahler's transcendence method (1929) .....	198
12.4 Methodological remarks and Siegel's lemma .....	200
12.5 Hermite-Lindemann theorem .....	202
12.6 Gelfond-Schneider theorem .....	204
12.7 Siegel-Shidlovski method .....	207
Exercises .....	208
 <b>Solutions to the exercises</b>	
Chapter 1 .....	213
Chapter 2 .....	220
Chapter 3 .....	225
Chapter 4 .....	233
Chapter 5 .....	244
Chapter 6 .....	255
Chapter 7 .....	265
Chapter 8 .....	277
Chapter 9 .....	289
Chapter 10 .....	301
Chapter 11 .....	310
Chapter 12 .....	320
 <b>Bibliography</b>	 331
 <b>Index</b>	 333
