

## CONTENTS

Preface		v
<b>Section 1: Unstructured Grids and Adaptive Finite Element Methods</b>		
Chapter 1	Simulating Steady State and Transient Aerodynamics Flows Using Unstructured Meshes and Parallel Computers <i>B. J. Evans, O. Hassan, J. W. Jones, K. Morgan and L. Remaki</i> .....	1
Chapter 2	Numerical Simulation of Fluid Movement in an Hourglass by an Energy-Stable Finite Element Scheme <i>M. Tabata</i> .....	29
Chapter 3	Adaptive Finite Element Discretization of Flow Problems for Goal-Oriented Model Reduction <i>R. Rannacher</i> .....	51
<b>Section 2: High-Order Efficient Schemes</b>		
Chapter 4	Recovery Discontinuous Galerkin Jacobian-Free Newton-Krylov Method for Multiphysics Problems <i>R. Nourgaliev, H. Park and V. Mousseau</i> .....	71
Chapter 5	A Numerical Diffusion Flux for Finite Volume and Discontinuous Galerkin Schemes Based on the Diffusive Riemann Problem <i>G. Gassner, F. Lörcher and C.-D. Munz</i> .....	91
Chapter 6	A BGK-Based Discontinuous Galerkin Method for the Navier-Stokes Equations on Arbitrary Grids <i>H. Luo, L. Luo and K. Xu</i> .....	103

Chapter 7	Construction of High Order Residual Distribution Schemes <i>R. Abgrall, A. Larat and M. Ricchiuto</i> .....	123
Chapter 8	Recent Developments in High-Order-Accurate Fluctuation Splitting Schemes <i>G. Rossiello, P. De Palma, G. Pascazio and M. Napolitano</i> .....	221
Chapter 9	Implicit Implementation of Variant WENO Schemes for Compressible Flow Computations <i>J. Y. Yang, T.-J. Hsieh and J. C. Huang</i> .....	241
Chapter 10	The Development of the Characteristic-Wise Hybrid Compact-WENO Scheme for Solving the Euler and Navier-Stokes Equations <i>Z.-S. Sun and Y.-X. Ren</i> .....	279
Chapter 11	Multi-Dimensional Limiting Process for Flow Physics Analyses on Structured and Unstructured Grids <i>C. Kim</i> .....	297
<b>Section 3: Simulations of Turbulent Flows and Orthogonal Decomposition Method</b>		
Chapter 12	Coping with Uncertainty in Turbulent Flow Simulations <i>P. Sagaut</i> .....	317
Chapter 13	Numerical Investigation and Proper Orthogonal Decomposition of Forced Convective Heat Transfer from Staggered Circular Cylinders <i>S. Tomkratoke and S. Sirisup</i> .....	345
<b>Section 4: Chemically Reacting Flows</b>		
Chapter 14	Efficient Parallel Fully Coupled Solver for Multicomponent Turbulent Reacting Flows <i>T. Belmrabet, M. Talice, G. Delussu and S. Hanchi</i> .....	357

Chapter 15	Time-Accurate Computational Analysis of Ignition Overpressure in Flame Trench <i>C. Kiris, J. Housman, M. Gusman, W. Chan and D. Kwak</i> .....	377
<b>Section 5: Aero-acoustics</b>		
Chapter 16	Aeroacoustics Investigation of Woodwind Instruments Based on Discontinuous Galerkin Methods <i>A. Richter, E. Brußies, J. Stiller and R. Grundmann</i> .....	399
Chapter 17	Recent Efforts in Rocket Plume Acoustics <i>T. Nonomura and K. Fujii</i> .....	421
<b>Section 6: Optimization Techniques</b>		
Chapter 18	Challenges in Aerodynamic Optimization <i>E. Arian and A. Iollo</i> .....	447
Chapter 19	Robust Multidisciplinary Design Optimisation Using CFD and Advanced Evolutionary Algorithms <i>D. Lee, K. Srinivas, L. F. Gonzalez, J. Periaux and S. Obayashi</i> .....	469
<b>Section 7: Special Topics</b>		
Chapter 20	Forty Years of CFD in Japan: Personal Overview <i>N. Satofuka</i> .....	493
Chapter 21	Computational Magneto-Fluid-Dynamics for Flow Control <i>J. S. Shang</i> .....	517
Chapter 22	Aerodynamic Surfaces Admitting Jumps of the Lift Coefficient in Transonic Flight <i>A. G. Kuz'min</i> .....	543

Chapter 23	A Level-Set Method for Three Dimensional Bifluid Flows Evolving in Square Micro Channels <i>C-H. Bruneau, T. Colin and S. Tancogne</i> .....	563
Chapter 24	Micro and Macro Scale Technique for Particle Growth Simulation <i>A. Markov</i> .....	583
Chapter 25	Adaptive Wavelet Method for Euler Equation Solution Algorithm <i>H. Kang, K. Kim, D. Lee and D. Lee</i> .....	601
