<b>Preface</b>	<b>vii</b>
<b>1 Scope</b>	<b>1</b>
<b>2 Why non-equilibrium thermodynamics?</b>	<b>7</b>
2.1 Simple flux equations . . . . .	8
2.2 Flux equations in non-equilibrium thermodynamics	11
2.3 The lost work of an industrial plant . . . . .	13
2.4 The second law efficiency . . . . .	19
2.5 Consistent thermodynamic models . . . . .	21
<b>3 The entropy production of one-dimensional transport processes</b>	<b>23</b>
3.1 Balance equations . . . . .	25
3.2 Entropy production . . . . .	27
3.3 Examples . . . . .	33
3.4 The frame of reference for fluxes . . . . .	41
<b>4 Flux equations and transport coefficients</b>	<b>45</b>
4.1 Linear flux-force relations . . . . .	46
4.2 Transport of heat and mass . . . . .	49
4.3 Transport of heat and charge . . . . .	58
4.4 Transport of mass and charge . . . . .	63
4.4.1 The mobility model . . . . .	69
4.5 Transport of volume and charge . . . . .	70

---

4.6	Concluding remarks . . . . .	73
<b>5</b>	<b>Non-isothermal multi-component diffusion</b>	<b>75</b>
5.1	Isothermal diffusion . . . . .	76
5.1.1	Prigogine's theorem applied . . . . .	77
5.1.2	Diffusion in the solvent frame of reference	78
5.1.3	Maxwell-Stefan equations . . . . .	81
5.1.4	Changing a frame of reference . . . . .	84
5.2	Maxwell-Stefan equations generalized . . . . .	87
5.3	Concluding remarks . . . . .	91
<b>6</b>	<b>Systems with shear flow</b>	<b>93</b>
6.1	Balance equations . . . . .	94
6.1.1	Component balances . . . . .	95
6.1.2	Momentum balance . . . . .	95
6.1.3	Internal energy balance . . . . .	96
6.2	Entropy production . . . . .	98
6.3	Stationary pipe flow . . . . .	104
6.3.1	The measurable heat flux . . . . .	106
6.4	The plug flow reactor . . . . .	107
6.5	Concluding remarks . . . . .	108
<b>7</b>	<b>Chemical reactions</b>	<b>109</b>
7.1	The Gibbs energy change of a chemical reaction .	112
7.2	The reaction path . . . . .	116
7.2.1	The chemical potential . . . . .	117
7.2.2	The entropy production . . . . .	119
7.3	A rate equation with a thermodynamic basis . . .	119
7.4	The law of mass action . . . . .	122
7.5	The entropy production on the mesoscopic scale .	124
7.6	Concluding remarks . . . . .	126
<b>8</b>	<b>The lost work in the aluminum electrolysis</b>	<b>129</b>
8.1	The aluminum electrolysis cell . . . . .	130
8.2	The thermodynamic efficiency . . . . .	132

---

8.3	A simplified cell model . . . . .	135
8.4	Lost work due to charge transfer . . . . .	137
8.4.1	The bulk electrolyte . . . . .	137
8.4.2	The diffusion layer at the cathode . . . . .	137
8.4.3	The electrode surfaces . . . . .	138
8.4.4	The bulk anode and cathode . . . . .	139
8.5	Lost work by excess carbon consumption . . . . .	139
8.6	Lost work due to heat transport through the walls	140
8.6.1	Conduction across the walls . . . . .	141
8.6.2	Surface radiation and convection . . . . .	142
8.7	A map of the lost work . . . . .	143
8.8	Concluding remarks . . . . .	145
<b>9</b>	<b>The state of minimum entropy production and optimal control theory</b>	<b>147</b>
9.1	Isothermal expansion of an ideal gas . . . . .	148
9.1.1	Expansion work . . . . .	150
9.1.2	The entropy production . . . . .	151
9.1.3	The optimization idea . . . . .	153
9.2	Optimal control theory . . . . .	158
9.3	Heat exchange . . . . .	163
9.3.1	The entropy production . . . . .	165
9.3.2	The work production by a heat exchanger	168
9.3.3	Optimal control theory and heat exchange	171
9.4	Concluding remarks . . . . .	176
<b>10</b>	<b>The state of minimum entropy production in selected process units</b>	<b>177</b>
10.1	The plug flow reactor . . . . .	178
10.1.1	The entropy production . . . . .	179
10.1.2	Optimal control theory and plug flow reactors . . . . .	184
10.1.3	A highway in state space . . . . .	185
10.1.4	Reactor design . . . . .	191
10.2	Distillation columns . . . . .	192

---

10.2.1	The entropy production . . . . .	195
10.2.2	Column design . . . . .	203
10.3	Concluding remarks . . . . .	204
<b>Appendix A</b>		<b>207</b>
A.1	Balance equations for mass, charge, momentum and energy . . . . .	207
A.1.1	Mass balance . . . . .	208
A.1.2	Momentum balance . . . . .	210
A.1.3	Total energy balance . . . . .	213
A.1.4	Kinetic energy balance . . . . .	214
A.1.5	Potential energy balance . . . . .	215
A.1.6	Balance of the electric field energy . . . . .	215
A.1.7	Internal energy balance . . . . .	215
A.1.8	Entropy balance . . . . .	217
A.2	Partial molar thermodynamic properties . . . . .	219
A.3	The chemical potential and its reference states . . . . .	222
A.3.1	The equation of state as a basis . . . . .	223
A.3.2	The excess Gibbs energy as a basis . . . . .	224
A.3.3	Henry's law as a basis . . . . .	226
A.4	Driving forces and equilibrium constants . . . . .	227
A.4.1	The ideal gas reference state . . . . .	228
A.4.2	The pure liquid reference state . . . . .	229
<b>Bibliography</b>		<b>231</b>
<b>List of Symbols</b>		<b>245</b>
