67 / Eukaryotic Heme Trafficking **1**

Scott Severance, Caiyong Chen and Iqbal Hamza

List of Abbreviations	2
I. Introduction	3
II. The Heme Biosynthetic Pathway	5
III. Transport of Heme Synthesis Intermediates	9
A. Transport of δ -aminolevulinic Acid Out of Mitochondria	10
B. Transport of Heme Precursors between Cytosolic Enzymes	11
C. Transport of Coproporphyrinogen III into and Protoporphyrinogen IX within Mitochondria	12
D. Transport of Protoporphyrin IX to Ferrochelatase	14
IV. Transport of Heme	16
A. Heme Chaperones	16
B. Heme Uptake in Bacteria	17
1. Gram-Negative Bacteria	18
2. Gram-Positive Bacteria	20
C. Heme Uptake in Yeast	20
D. Heme and Hemoglobin Uptake in Trypanosomatids	21
E. Heme Uptake and Detoxification in Insects	22
F. Heme Transport in Helminths	24
G. Heme Transport in Mammals	26
1. Nutritional Iron Deficiency	26
2. Absorption of Iron and Heme by the Intestine	26
3. Heme Import	27
4. Heme Export	28
5. Recycling of Heme Iron in Humans	28
V. Heme-Binding Proteins	29
A. Cytoplasmic Proteins	30
B. Extracellular Proteins	31

VI. Potential Mechanisms for Interorganellar Heme Transfer	32
A. Tethering the Mitochondrial Outer Membrane to the Endoplasmic Reticulum	33
B. Maintaining the Morphology of the Cristae	35
C. Delivering Cargo via Mitochondrial-Derived Vesicles.	35
D. Exchanging Materials between Plant Organelles	36
VII. Conclusions	36
VIII. References	37

68 / Ferrochelatase Structure and Reaction Mechanism **49**

Gloria C. Ferreira and Gregory A. Hunter

List of Abbreviations.	50
I. Introduction	50
II. Protoporphyrin IX, Heme, and Ferrochelatase.	51
III. Ferrochelatase Activity	53
IV. Ferrochelatase: From Purification to Overproduction	55
A. Purification	55
B. Cloning, Expression, and Overproduction.	56
V. Ferrochelatase Structure	60
A. Oligomeric State	60
B. [2Fe–2S] Cluster: An Enigmatic Cofactor in Ferrochelatase	61
C. Crystal Structures.	67
D. Metal Ion-Binding Site(s)	71
E. Porphyrin-Binding Site	74
VI. Ferrochelatase Reaction Mechanism	78
A. Nonenzymatic Porphyrin Metalation	78
1. Porphyrin Distortion	80
2. Metal Ion Reactivity	81
B. Ferrochelatase-Catalyzed Porphyrin Metalation	81
1. Ferrochelatase Mimetics and the Role of Porphyrin Distortion.	81
2. Porphyrin Substrate Specificity.	84
3. Metal Ion Substrate Specificity.	85
4. The Lessons of Substrate Promiscuity	87
C. Kinetic and Chemical Mechanisms.	87
1. Steady-State Kinetic Mechanism	87
2. Pre-steady-State Kinetic Mechanism.	89
3. Metal Ion Substrate Inhibition and Selectivity.	89
4. Summary of the Reaction Mechanism	92
VII. Ferrochelatase Interaction with Protoporphyrinogen IX Oxidase, Porphyrin Transport, and Delivery	93

VIII. Ferrochelatase Interaction with Iron-Binding Proteins, Iron Transport, and Delivery	96
IX. Mitochondrial Import	100
X. Ferrochelatase, Iron and Heme Metabolism, and Disease	101
A. Erythropoietic Protoporphyrin	101
B. Iron Metabolism-Related Disorders	104
XI. Summary and Perspectives for the Future	106
XII. Acknowledgments	107
XIII. References	107

69 / Heme Proteins as Gas Sensors 123

Emily E. Weinert and Michael A. Marletta

List of Abbreviations	124
I. Introduction	124
A. Requirement of a Heme Sensor Protein	125
II. H-NOX Domains	128
A. sGC	128
1. Activation of sGC	128
B. Bacterial H-NOX Domains	130
1. Structural Investigations of Ligand Selectivity	131
2. H-NOX Regulation of Output Domains	132
III. Heme-PAS Domains	135
A. FixL	135
1. Heme-ligand Regulation of Kinase Activity	136
B. <i>AxPDEA1</i>	137
C. <i>EcDos</i>	137
D. Mammalian Heme-PAS-containing Proteins	139
IV. Globin Coupled Sensors	139
A. HemATs	141
1. Ligand Affinity in Globin Coupled Sensors	141
B. Diguanylate Cyclase-containing Globin Coupled Sensors	142
1. <i>EcDosC</i>	143
V. <i>CooA</i>	144
A. Structural Characterization of <i>CooA</i>	145
B. Structural Basis for Activation upon CO Binding	146
VI. GAF Domains	148
A. <i>DosT</i>	149
B. <i>DosS</i>	149
VII. Conclusions	152
VIII. References	153

70 / Heme Biosynthesis	159
<i>Gunhild Layer, Dieter Jahn and Martina Jahn</i>	
List of Abbreviations	160
I. Introduction	160
A. Heme Biosynthesis Related Disease, Cancer Phototherapy and Herbicide Applications	162
II. Heme Biosynthesis	163
A. Two Independent Pathways Lead to the Formation of 5-Aminolevulinic Acid	164
1. Shemin Pathway	165
a. 5-Aminolevulinic acid synthase (ALAS)	166
2. C ₅ -Pathway	170
a. Glutamyl-tRNA reductase (GluTR)	170
b. Glutamate-1-semialdehyde-2,1-aminomutase (GSAM)	173
B. Uroporphyrinogen III is Formed from ALA in Three Consecutive Enzymatic Steps	175
1. Porphobilinogen Synthase (PBGs)	177
2. Porphobilinogen Deaminase (PBGD)	181
3. Uroporphyrinogen III Synthase (UROS)	183
C. Conversion of Uroporphyrinogen III into Heme Requires Four Enzymatic Steps	186
1. Uroporphyrinogen III Decarboxylase (UROD)	188
2. Coproporphyrinogen III Oxidase (CPO)	191
3. Coproporphyrinogen III Dehydrogenase (CPDH)	194
4. Protoporphyrinogen IX Oxidase (PPO)	197
5. Ferrochelatase (FC)	200
III. Coordination of Heme Biosynthesis in the Cell — Metabolic Channelling of Sensitive Intermediates	203
IV. Conclusion and Perspectives	204
V. Acknowledgments	204
VI. References	205
71 / Mechanisms of Cytoprotection by Hemopexin	217
<i>Ann Smith</i>	
List of Abbreviations	219
I. Introduction	223
II. Physicochemical Properties of Hemopexin	226
A. General Structural Features of Hemopexin	226
B. Crystal Structure of Hemopexin: The Novel Four-Bladed β -Propeller Hemopexin Domain	228

C. Interdomain Interactions Form the Unique Heme-Binding Site of Hemopexin.	234
III. Heme–Hemopexin Characteristics.	236
A. Heme Binding by Hemopexin	236
B. Spectroscopic Characterization of Heme–Hemopexin Complexes	238
C. Reduction of Heme–Hemopexin and Binding of Exogenous Ligands	240
D. Effects of pH and Temperature on Heme–Hemopexin	244
IV. The N-Domain Provides a Temporary Docking Site for Heme	246
V. Additional Metal and Non-metal Tetrapyrrole Ligands of Hemopexin	248
VI. Biological Consequences of the Physicochemical Properties of Heme–Hemopexin	251
VII. Isolation and Characterization of Hemopexin	251
A. Methods	251
B. Recombinant Hemopexin	255
VIII. The Hemopexin Gene and Evolution of Hemopexin.	255
A. The Hemopexin Gene	255
B. Hemopexin Polymorphism.	256
C. Evolution of Hemopexin	258
D. Avian Hemopexin	262
IX. Hemopexin Gene Promoter Structure and Regulation of Expression of Hemopexin	263
A. Structural Features of the Hemopexin Promoter.	263
B. Regulation of Expression of Hemopexin	264
C. Temporal Changes in Hemopexin Expression During Development	265
X. Hemopexin Metabolism in Human Disease.	271
A. Hemopexin as a Biomarker of Disease	272
B. In Hemolytic Conditions	272
C. Hemopexin Expression in Inflammation, Cancer, Infection and Neurodegeneration	274
D. Proteomics Studies That Identify Hemopexin as a Marker Protein	277
E. Proteinuria, Biomarkers and Kidney Disease Prognosis	280
XI. Dynamics of Heme–Protein Interactions in the Bloodstream	281
A. Plasma Clearance of Hemopexin	290
XII. Heme Sequestration by Hemopexin Protects Cells and Biological Molecules from the Pro-oxidant Toxicity of Heme	293

A.	Heme Toxicity	293
B.	Hemopexin and Mortality	296
C.	Hemopexin Removes Membrane-Associated Heme.	296
D.	Hemopexin is an Extracellular Antioxidant and Heme–Hemopexin Complexes Are Relatively Stable in the Presence of Peroxide, and Hemopexin Protects Against Reperfusion Injury	297
XIII.	Hemopexin and Iron Salvage	298
A.	Plasma Clearance of Heme by Hemopexin in Intravascular Hemolysis	299
B.	Heme Transported by Hemopexin is Catabolized in the Liver and Hemopexin Normally Recycles Intact	300
C.	Iron Reutilization by Hemopexin Varies, Depending Upon Body Iron Stores	304
XIV.	Receptor-Mediated Endocytosis of Heme–Hemopexin and Its Regulation	304
A.	Two Processes of Heme Uptake by Endocytosis of Heme–Hemopexin via Hemopexin Receptors.	304
B.	Cellular Iron Status Alters Surface Expression of Hemopexin Receptors and Heme Uptake Rates	307
XV.	The Hemopexin and Haptoglobin Systems are Linked	308
XVI.	Mechanisms whereby Heme is Released from Heme–Hemopexin	309
XVII.	Intracellular Route of Heme, Delivered by Hemopexin and Hemopexin Receptors, to Cells for Degradation by Heme Oxygenases.	311
XVIII.	Heme Oxygenases are Linked with Heme–Hemopexin for Iron Recycling and Potentially Also Iron Overload	313
A.	Human HO1 Deficiency Provides an Example in Humans of Coregulation of Hemopexin and Haptoglobin.	314
XIX.	Cytoprotection by Hemopexin Against Ischemia–Reperfusion Injury in Stroke Requires both Heme Oxygenase-1 and Signaling Cascades	316
A.	Heme and Iron Contribute to Neurodegeneration in Hemorrhagic Brain Injury and Hemopexin Mediates Protection	317
XX.	Two Roles for Hemopexin in Trafficking Extracellular Heme to the Liver for Iron Reclamation and Recycling.	319
XXI.	Role for Hemopexin in Modulating the Innate and Autoimmune Systems.	322

XXII. Molecular Mechanisms of Regulation of Heme and Iron Absorption by the Enterocytes Involve Systemic Signals from Plasma Proteins	325
XXIII. Hemopexin in Barrier Tissues	329
XXIV. Role for Hemopexin in Nutritional Immunity.	331
XXV. Conclusions	334
XXVI. Acknowledgments	335
XXVII. References	335

72 / Mechanisms of Heme Uptake and Utilization in Bacterial Pathogens 357

Angela Wilks and Kylie D. Barker

List of Abbreviations	358
I. Introduction	358
II. Overview of Heme Uptake in Bacteria	359
A. Navigating the Challenge of the Gram-Positive Cell Wall	359
B. Active Heme Transport in Gram-Negative Organisms	360
III. Structural Aspects of Heme Uptake in Gram-Negative and Gram-Positive Organisms	361
A. TonB-Dependent Receptors of Gram-Negative Organisms	361
B. Periplasmic Heme Trafficking	364
C. ATP-Dependent Transport of Heme Across the Cytoplasmic Membrane	366
D. The Gram-Positive Lipoprotein Network in Heme Uptake	367
E. Common Structural Motifs Between the Gram-Positive and Gram-Negative Heme Uptake Proteins?	369
IV. Mechanistic Insight into Heme Uptake and Transfer	370
A. Heme Specificity, Affinity, and Dynamics	370
B. Heme Coordination and Spin State Transitions	373
C. Protein–Protein Interactions	375
V. Heme Utilization and Iron Release	376
A. Bacterial Heme Oxygenases	376
B. Iron Release by Non-Heme-Oxygenase Mechanisms	378
C. The Role of Biliverdin in Bacterial Signaling	381
D. Is Exogenously Acquired Heme Incorporated into Bacterial Proteins?	382
VI. Supply and Demand: Regulation of Heme and Iron Uptake	382
A. Transcriptional Regulation of Heme and Iron Uptake	383
B. Post-Transcriptional Regulation of Heme and Iron Uptake	384
C. Extracellular Signaling Mechanisms	385

VII. Heme Uptake and Utilization as a Potential Therapeutic Target	388
A. Vaccine Development	388
B. Metalloporphyrin Inhibitors of Heme Uptake and Utilization	389
VIII. Conclusions and Future Directions	390
IX. Acknowledgments	391
X. References	391

73 / Emerging Roles of Heme as a Signal and a Gas-Sensing Site: Heme-Sensing and Gas-Sensing Proteins **399**

Jotaro Igarashi, Kenichi Kitanishi and Toru Shimizu

List of Abbreviations	401
I. Introduction	405
II. Heme Sensor Proteins	407
A. Specific Features of the Heme-Responsive Heme Sensor Proteins	407
1. Thiolate as the Heme-Binding Site	407
2. CP Motif or Heme-Regulatory Motif	410
3. Fast Heme Dissociation Rate	410
4. Redox-Dependent Heme Binding	410
5. Protein Flexibility and Plasticity	413
B. Heme-Responsive Heme Sensor Proteins	414
1. Heme-Regulated Inhibitor (HRI): Heme-Regulated Eukaryotic Initiation Factor 2 α (eIF2 α) Kinase	415
2. NPAS2	415
3. mPer2	419
4. Hap1	419
5. THAP	420
6. IRP2v	420
7. Irr	420
8. Nrf2	421
9. Bach1	421
10. E75	422
11. DHR51	422
12. Rev-erb α	422
13. Rev-erb β	423
14. Human Slo1 BK Channel	423
15. FurA	424
16. ShuS	424
17. N-End Rule Pathway	425

18. Neudesin	425
19. HssRS	425
20. ChrS	426
21. HbrL	426
22. DGCR8	426
23. Heme-Regulated β -Lactamase: Engineered Heme-Regulated Enzyme	427
24. Proteins Interacting with Heme, But in Which the Role of Heme is Unclear	427
a. Synthesis of yeast peroxisomal proteins.	427
b. HIV-1 and HIV-2	427
c. SOUL and p22/HBP.	428
d. Dap1p and PGRMC1p.	428
e. Clotrimazole–heme complex	428
f. TLR4.	428
g. G-Protein-coupled receptor	428
h. TrpRS	428
i. PrP ^C	428
j. AhpC	429
k. Ferritin IRE	429
l. Fur	429
m. Hemopexin	429
n. Serum albumin	429
III. Heme-Based Gas Sensor Proteins	429
A. Introduction	429
B. O ₂ Sensor Proteins	430
1. PAS Fold as an O ₂ -Sensing Site	430
a. FixL	432
b. <i>Ec</i> DOS.	432
c. <i>AxPDEA1</i>	433
2. Globin-Coupled Sensors	435
a. HemAT	435
b. GsGCS	435
c. <i>AvGReg.</i>	436
d. <i>BpeGReg.</i>	437
e. GCY-35, GLB-5 and GLB-6	437
f. DosC or YddV	438
g. HemDGC	438
3. GAF Domain as an O ₂ -Sensing Site	438
a. DosT.	439
b. DevS (DosS)	439

4. AppA	440
5. Hap1	440
6. Gyc-88E	440
7. H-NOX	441
C. NO Sensor Proteins	441
1. sGC	441
2. H-NOX	441
3. SONO	442
4. Gyc-88E	442
5. DNR	442
D. CO Sensor Proteins	443
1. CooA	443
2. Cystathionine β -Synthase	443
3. BK _{Ca}	444
4. BxRcoM-2	444
5. Heme-Regulated Transcriptional Factors Associated with Circadian Rhythms: NPAS2, CLOCK, E75, DHR51, Rev-erb α , Rev-erb β	444
6. Systems Modulating the Response to CO	445
E. c-Type Heme-Containing Redox- and/or O ₂ -Sensing Proteins	445
1. GSU0935, GSU0582	445
2. DcrA	445
F. H ₂ S Sensor Proteins	446
IV. Conclusions and Future Directions	446
V. References	448
Index	461
