

Contents

| | |
|--|----|
| 1. The Hydrosphere — An Overview | 1 |
| 2. The Isotopes of Hydrogen and Oxygen | 9 |
| 2.1. Measurement techniques | 11 |
| 2.2. The natural abundance of isotopes of oxygen and hydrogen | 19 |
| 3. Isotope Fractionation | 22 |
| 3.1. Isotope fractionation under equilibrium conditions (Thermodynamic fractionation processes) | 23 |
| 3.2. Isotope fractionation accompanying transport processes | 26 |
| 4. Models of Isotopic Change in the Water Cycle | 28 |
| 4.1. Closed equilibrium system | 28 |
| 4.2. Open equilibrium systems — the Rayleigh Equation | 29 |
| 4.2.1. Systems without inflow | 30 |
| 4.2.2. Systems with both in- and outflow | 30 |
| 4.3. Evaporation under natural conditions | 32 |
| 4.3.1. Isotope composition of the evaporation flux — δ_E | 36 |
| 4.3.2. Postscript | 37 |
| 4.4. The “Isotope Transfer Function” (ITF) | 37 |

| | | |
|--------|---|-----|
| 5. | The Ocean System and the Marine Atmosphere | 39 |
| 5.1. | Isotope composition of the ocean waters | 39 |
| 5.2. | Water in the marine atmosphere | 42 |
| 5.2.1. | Isotopic composition of marine vapour | 42 |
| 5.2.2. | Precipitation over the oceans | 47 |
| 6. | Clouds and Precipitation | 51 |
| 6.1. | The isotopic composition of the precipitation | 52 |
| 6.1.1. | Snow, hail and other solid phase precipitation | 57 |
| 6.1.2. | Precipitation over the continents | 58 |
| 6.1.3. | The Local Meteoric Water Lines (LMWL) | 63 |
| 6.2. | The isotope composition of the atmospheric moisture | 65 |
| 7. | Snow and Snowmelt Processes | 67 |
| 7.1. | Solid precipitation elements | 67 |
| 7.2. | Snow accumulation and changes in the snowpack | 68 |
| 7.3. | The snowmelt process | 69 |
| 8. | The Land-Biosphere-Atmosphere Interface | 70 |
| 8.1. | Isotope change in the land-biosphere-atmosphere interface | 71 |
| 8.1.1. | Above-surface processes | 75 |
| 8.1.2. | Local surface runoff | 78 |
| 8.1.3. | The local percolation flux | 79 |
| 9. | Surface Waters | 81 |
| 9.1. | The surface runoff | 81 |
| 9.2. | Isotopic hydrograph separation | 82 |
| 9.3. | River systems and the “Isotopic River Continuum Model” | 83 |
| 9.4. | Open waters (ponds to lakes) | 86 |
| 9.4.1. | The Index-Lake concept | 93 |
| 9.4.2. | Vertical mixing in lakes | 94 |
| 9.4.3. | Ice covered lakes | 96 |
| 9.4.4. | Lakes without surface outflow | 99 |
| 9.5. | Coupled and complex evaporative systems | 100 |

| | |
|--|-----|
| 10. Water in Soils and Plants | 106 |
| 10.1. Infiltration, percolation and interflow (*) | 106 |
| 10.2. Evaporation from within the soil | 109 |
| 10.2.1. The soil-mediated recharge flux | 112 |
| 10.3. Water uptake by plants | 112 |
| 10.4. Water in the plant tissues | 116 |
| 11. Saline Waters | 122 |
| 11.1. Sources of salinity in the hydrologic cycle | 124 |
| 11.2. Salinisation mechanisms and their isotopic signature . | 127 |
| 11.2.1. Evaporation of saline waters | 129 |
| 11.2.2. Freezing of saline solutions | 130 |
| 11.2.3. Ultrafiltration | 131 |
| 12. Sub-Surface Waters | 132 |
| 12.1. Circulating (meteoric) groundwater | 133 |
| 12.2. Paleowaters | 134 |
| 12.3. Geothermal systems | 138 |
| 12.4. Formation water | 140 |
| 13. The Continental Scale Water Balance and Its Isotopic Signature | 144 |
| 13.1. Water isotopes on the continental lee-side | 150 |
| 13.2. Isotope aided GCMs | 150 |
| 14. Isotopes and Climate Change | 152 |
| 14.1. Oxygen and Hydrogen isotope composition of proxy materials as tools in paleo-climate research | 152 |
| 14.1.1. Glaciers | 154 |
| 14.1.2. Ocean and lake sediments | 155 |
| 14.2. Effect of climate change on the isotope signature in the hydrologic cycle | 156 |
