<i>Preface</i>	vii
<i>Introduction</i>	ix
<i>Acknowledgments</i>	xi
Chapter I The Nature of Light	1
1.1 Origins	1
1.2 Refraction	2
1.3 Fermat's Principle	4
1.4 The Speed of Light	4
1.5 The Wave Nature of Light	4
1.5.1 What Are Waves?	4
1.5.2 Wave Characteristics	5
1.6 Diffraction and Resolution Limits	9
1.7 The Quantum Theory and Photons	12
1.8 The Production of Light	15
1.8.1 The Energy of Bound Electrons	15
1.8.2 Electron Spin	19
1.9 The Planck Equation and Photochemical Reactions	19
References	20
Chapter II Introduction to Photophysics	21
2.1 From Atoms to Molecules: The Formation of Chemical Bonds	21
2.2 Electronic Transitions	23
2.3 Excitation and Deactivation of Molecules	25

2.3.1	The Jablonski Diagram	25
2.3.2	The Excitation Coefficient: The Beer-Lambert Law	26
2.3.3	The Franck-Condon Principle	28
2.3.4	Deactivation from Singlet Excited States	29
2.3.5	Fluorescence Excitation Spectrum	30
2.3.6	Excitation-Emission Matrices	30
2.3.7	Deconvolution of Spectra	33
2.3.8	Deactivation of the First Singlet Excited State by Intersystem Crossing to the Triplet State	35
2.4	Factors Influencing the Fluorescence Quantum Yield	37
2.4.1	Definition of the Fluorescence Quantum Yield	37
2.4.2	Sensitivity of Fluorescence to Environment	38
2.4.3	Impurity Quenching of Fluorescence: The Stern-Volmer Equation	39
2.5	Quenching of the First Excited Singlet State By Energy Transfer	40
2.5.1	Energy Transfer Between Singlet States	40
	References	43
Chapter III	Basic Approaches to the Experimental Study of Chemical and Biological Luminescence	45
3.1	Long-Lifetime Probes: Metal-ligand Complexes as a New Class of Long-Lived Fluorophores for Protein Hydrodynamics	45
	References	57
3.2	Chemiluminescence	57
	Reference	58
3.3	Bioluminescence	58
	References	60
3.4	Green Fluorescent Protein (GFP)	61
	References	68

Chapter IV	Methods and Instrumentation	69
4.1	Spectrofluorometers and Cell Sorters	69
	Reference	71
4.2	Microspectrofluorometers	71
	References	74
4.3	Detectors Used in Fluorescence Imaging	74
	4.3.1 Charge-Coupled Devices: CCDs	74
	Reference	75
	4.3.2 Avalanche Diodes	75
	Reference	77
4.4	Fluorescence Imaging with CCD Cameras	77
4.5	Digital Imaging	77
	Reference	78
4.6	Ratio Fluorescence Microscopy	79
	References	91
4.7	Multiparameter Imaging	91
	References	93
4.8	Multiprobe Approach to the Study of Intercellular Communication	94
	References	94
4.9	Photodiode Array Fluorescence Spectroscopy	101
4.10	Confocal Fluorescence Microscopy	102
	References	103
	4.10.1 Three-Dimensional Confocal Microscopy: Volume Investigation of Biological Specimens	103
	References	105
	4.10.2 Confocal 3-D Volume Investigation	105
	Reference	107
	4.10.3 Fluorophores for Confocal Microscopy	107
	Reference	108
	4.10.4 Biological Applications of Confocal Microscopy	108

4.11	Fluorescence Lifetime Imaging (FLIM)	109
	References	116
4.12	Frequency-Domain Spectroscopy and Tomography of Tissues	117
4.12.1	Fluorescence Lifetime Spectroscopy and Imaging in Scattering Media with Frequency-Domain Techniques	117
	References	119
4.13	Fluorescence Photobleaching Recovery (FPR, Also FRAP) and Green Fluorescent Protein (GFP) Chimeras	119
	Reference	125
4.14	Time-Resolved Fluorescence Resonance Energy Transfer (FRET)	125
	Reference	126
4.15	Fluorescence Polarization in the Microscope	126
	Reference	128
4.16	Polarization Fluorescence Photobleaching Recovery (PFPR)	128
4.17	Picosecond Fluorescence Kinetics	129
	Reference	130
4.18	Raman Fluorescence Spectroscopy in Single Living Cells	130
	References	133
	Related Topics	133
4.19	Experimental Time-Resolved Methods and Photon Migration in Tissues Studied by Time-Resolved Spectroscopy	133
	Reference	134
4.20	Fourier Transform Spectroscopy in the Infrared	134
4.21	Secondary Ion Mass Spectrometry (SIMS)	135
	Reference	136
Chapter V	New Methods. Theoretical Basis and Potential Applications to Biology	137

5.1	Total Internal Reflection Fluorescence Microscopy (TIRF) in Cells	137
	Reference	139
5.2	Surface Fluorescence Detection by a Microscope	139
	Reference	141
5.3	Intracellular Sensing and Optical Imaging Beyond the Diffraction Limit: Scanning Near-Field Optical Microscopy (SNOM)	141
	References	147
5.4	Optical Forces, Optical Traps, Optical Tweezers in Combination with Microspectroscopy and Fluorescent DNA Intercalating Dyes	147
	References	156
5.5	Fourier Interferometric Stimulation (FIS) and Spectral Image Analysis	157
	Reference	158
5.6	Fourier Transform Multiplex Spectroscopy and Spectral Imaging of Protoporphyrin in Single Melanoma Cells	159
	References	162
5.7	Fluorescence <i>In Situ</i> Hybridization (FISH)	162
	5.7.1 Current FISH Methodology	162
	Reference	166
	5.7.2 FISH Applicable to Metaphase Spreads and Interphase Chromosome	166
	Reference	167
	5.7.3 Chromosomal Localization of Clone by FISH	168
	Reference	168
	5.7.4 Activity Banding of Human Chromosomes	168
	Reference	176
5.8	Beyond FISH: Multicolor Spectral Karyotyping of Human Chromosomes (SKY)	176
	References	178

5.9	Combinatorial Multi-fluor FISH	179
	References	190
5.10	Two-Photon Excitation Induced Fluorescence	190
	References	199
5.11	Three-Photon Induced Fluorescence	200
	References	206
5.12	Light Fluorescence Quenching (LQ) and Stimulated Emission (SE)	206
	References	216
5.13	Related Topics: Infrared Imaging Spectroscopy of Breast	216
	Reference	218
Chapter VI Fluorescent Probes		219
6.1	Ion Probes	219
	6.1.1 Calcium Probing	219
	References	226
	6.1.2 Calcium Compartmentalization in the Sarcoplasmic and Endoplasmic Reticulum: Spatially and Functionally Distinct Calcium Stores	227
	Reference	235
	6.1.3 Localization of Sodium/Calcium Exchanger in Rat Cortical Astrocytes	235
	Reference	236
	6.1.4 pH Probes	238
	6.1.4.1 Videomicrofluorometry of pH in Single Living Cells	238
	Reference	240
	6.1.4.2 Yolk Platelet pH Studies During <i>Xenopus laevis</i> Development	240
	References	250
6.2	Membrane Potential Probes	250
	References	260

6.2.1	Confocal Microscopy of Potentiometric Dyes	261
Reference		267
6.3	Cell Organelle Probes	267
6.3.1	Mitochondrial Fluorescence Probes	267
References		267
6.3.1.1	Quantitative Differential Effects of Mitochondrial Probe Rhodamine 123 on Human Normal Cells and Colon Cancer Cells	269
References		271
6.3.1.1.1	Aberrant Mitochondria in Colon Carcinoma Lines	272
Reference		273
6.3.1.2	Monitoring of Relative Mitochondrial Membrane Potential in Living Cells by Fluorescence Microscopy and Perturbation of Rhodamine 123 Accumulation in Mitochondria	273
References		274
6.3.1.3	Rhodamine 123 and Analogs on Function and Viability of Pulsating Myocardial Cells	274
References		275
6.3.1.4	Resistance to Rhodamine 123	275
Reference		277
6.3.1.5	Mitochondrial Alterations in Cancerous Cells and Targets for Therapy	277
References		281
6.3.1.6	Localization of Mitochondria with Rhodamine 123 and Its Significance in Oncology	281
References		287

	6.3.1.7	A New Mitochondrial Probe: J-Aggregate Formation of the Lipophilic Cation JC-1	287
References			295
	6.3.1.8	Simultaneous Imaging of Cell and Mitochondrial Membrane Potentials	295
Reference			297
	6.3.1.9	Membrane Potentials in Individual Mitochondria with Imaging in Five Dimensions	297
Reference			305
	6.3.1.10	Cytosolic Calcium Transients and Concurrent Mitochondrial Depolarizations	305
Reference			310
	6.3.2	Golgi Apparatus	311
References			316
	6.3.2.1	The Endoplasmic Reticulum-Golgi Membrane System ER-Golgi Trafficking	316
References			317
	6.3.2.2	Golgi Studies in Hepatocytes and Fibroblasts	320
References			320
	6.3.2.3	Golgi Studies in Fusion-Competent and Fusion-Deficient Myoblasts	323
References			323
	6.3.3	Endosomes	326
Reference			326
	6.3.3.1	Transbilayer Movement of Bodipy-Labeled Lipids in Lipid Vesicles	326
Reference			328
	6.3.3.2	A Modulator of Endocytosis: Ceramide	329
Reference			330

	6.3.3.3	Non-endocytic Uptake of Fluorescent Analogs of Phosphatidylserine	331
	6.3.3.4	The Acidification of the Cytosol-Stimulated C6-NDP-PS Uptake in Chinese Hamster (CHO) Fibroblasts	332
Reference			334
	6.3.3.5	Spectral Properties of Plasma Membrane Lipid Analog; the First Seconds of Endocytosis	334
Reference			339
	6.3.3.6	Transferrin Endocytic Sorting	339
References			346
	6.3.3.7	Retardation of Transferrin Receptor Recycling by Bafilomycin A	346
Reference			352
	6.3.4	Lysosomal Probes	352
	6.3.4.1	Cell-Permeant Probes for Lysosomes	352
Reference			354
	6.3.4.2	Other Lysosomotropic Probes	354
References			356
	6.3.4.3	Fluorogenic Probes of Lysosomal Hydrolases	357
References			361
	6.3.4.4	Fluorescent Probes of Lysosomal Hydrolases	362
Reference			363
	6.3.4.5	Lysosomes in Cells Treated with Cytotoxic Agents	363
Reference			364
	6.3.5	Endoplasmic Reticulum (ER)	368
Reference			371

	6.3.5.1	Construction of the Endoplasmic Reticulum	371
Reference			375
	6.3.5.2	Dynamic Behavior of ER in Living Cells	375
Reference			379
	6.3.5.3	Dynamics of the ER in Nonmuscle and Muscle Cells	379
Reference			383
	6.3.5.4	Dynamics of the Cytoskeleton-Organelle Connections	383
Reference			384
	6.3.6	Probes of Cytoskeleton	384
Reference			389
	6.3.6.1	Probes for Microtubules	389
	6.3.6.1.1	Microinjection of Probes for Microtubules	389
Reference			392
	6.3.6.1.2	Microtubule Stress Fibers and Endoplasmic Reticulum Interaction	393
Reference			401
	6.3.6.1.3	Effects of Microtubules on Mitochondrial Distribution	401
Reference			404
	6.3.6.1.4	Distribution of Microtubules and Inactivation of Organelle Motility in Cells Photosensitized by 3-3'-Dihexyl Carbocyanine Iodide [Dioc <sub>6</sub> (3)]	404
Reference			407
	6.3.6.1.5	Midzone Microtubule Bundles and Cytokinesis	407

	6.3.6.2	Microfilaments (Actin)	410
	6.3.6.2.1	Actin Assembly in the Cortical Region of Growing Neurites in PC-12 Cells	410
Reference			415
	6.3.6.2.2	Dynamics of Nonfilamentous Actin	415
Reference			416
	6.3.6.2.3	Cortical Movement of Microinjected Actin in the Formation of Contractile Ring in Dividing Cultured Animal Cells	416
Reference			419
	6.3.6.2.4	Actin and $\alpha$ -Actinin Along Stress Fibers	419
Reference			422
	6.3.6.2.5	Possible Role of Treadmilling in Exchange of Actin Subunits at the Leading Edge of Living Fibroblasts	422
Reference			424
	6.3.6.2.6	Exchangeability of $\alpha$ -Actinin in Cardiac Fibroblasts and Myocytes	424
Reference			426
	6.3.6.2.7	$\alpha$ -Actinin Aggregates in Transformed Cells	426
Reference			428
	6.3.6.2.8	Cytokinesis and 3-D Orientation of Actin Filaments	429
Reference			434
