

CONTENTS

Foreword by Professor Wesley Nyborg	xiii
Preface	xvii
List of symbols	xix
Useful dimensionless parameters	xxi
Note on units of viscosity	xxiii
Note on units of pressure	xxiv
Chapter One Introduction	1
1.1 History	1
1.2 Definitions	4
1.3 Hydrodynamic cavitation	5
1.4 Acoustic cavitation	6
1.5 Optic and particle cavitation	6
References	7
Chapter Two Bubble dynamics	8
2.1 Introduction	8
2.2 Bubble nuclei: Blake threshold	8
2.3 General equations of bubble dynamics	11
2.4 Dynamical equation of a spherical collapsing bubble	13
2.4.1 Empty bubble – 2.4.2 Gas bubble: Noltingk, Neppiras and Poritsky – 2.4.3 Apfel's derivation for a gas bubble – 2.4.4 Equation involving compressibility of the liquid	
2.5 Solutions of bubble equations	18
2.6 Rayleigh analysis of a cavity and its extensions	19
2.6.1 Rayleigh analysis of an empty cavity – 2.6.2 The adiabatic collapse of a gas-filled cavity – 2.6.3 The generation of shock waves – 2.6.4 The solution by Fujikawa and Akamatsu – 2.6.5 The solutions by Vokurka	
References	36
Chapter Three Acoustic cavitation	38
3.1 Introduction	38

3.2	Nuclei and cavitation thresholds	40
	3.2.1 Nuclei – 3.2.2 Yount, Gillary and Hoffman’s investigation of nuclei	
3.3	Stable cavitation	45
	3.3.1 Linear theory of small oscillations of a gas bubble – 3.3.2 Damping of stable bubbles – 3.3.3 Mass diffusion of gas through the bubble surface (rectified diffusion) – 3.3.4 Thermal diffusion of gas through the bubble surface – 3.3.5 Non-linear oscillations of stable cavities – 3.3.6 Threshold for growth by rectified diffusion	
3.4	Transient cavitation	77
	3.4.1 Solutions of the bubble equation for transient cavitation – 3.4.2 Transient cavitation thresholds: Flynn – 3.4.3 Transient cavitation thresholds: Apfel – 3.4.4 Predicting the type of bubble behaviour: Apfel – 3.4.5 Predicting the type of bubble behaviour: Neppiras – 3.4.6 Classification of cavitation by Vaughan and Leeman	
3.5	Cyclic cavitation processes	99
	3.5.1 The transient cavitation cycle – 3.5.2 The degassing cycle – 3.5.3 The resonant bubble cycle with the emission of micro-bubbles (surface waves) – 3.5.4 Bubble growth above the resonance size – 3.5.5 Cavitation relaxation – 3.5.6 Cavitation hysteresis	
3.6	Non-radial bubble motion (surface waves – shape oscillations)	108
	3.6.1 Taylor instability – 3.6.2 Instability at a gas–liquid interface – 3.6.3 Stability of a collapsing transient cavity – 3.6.4 Stability of an oscillating stable cavity – 3.6.5 General dynamical problem of the distortion of the surface separating two immiscible liquids – 3.6.6 Experimental results	
3.7	Acoustic emission	115
	3.7.1 Emission at low intensities: the stable cavitation regime – 3.7.2 Emission at high intensities: the transient cavitation regime – 3.7.3 Lauterborn’s work on acoustic emission and acoustic turbulence	
3.8	High speed photographic studies of bubble motion	137
	3.8.1 Photographic studies at the California Institute of Technology – 3.8.2 Photographic studies at the University of Michigan – 3.8.3 Photographic studies at the Academy of Sciences, Moscow – 3.8.4 Photographic studies at the University of Göttingen	
3.9	Vapour bubbles	151
3.10	Liquid helium	153
3.11	Forces on bubbles in sound fields: Bjerknes forces	156
	3.11.1 Radiation force on a bubble in a stationary wave – 3.11.2 Radiation forces between bubbles – 3.11.3 Radiation force on a particle near a bubble	

3.12	Microsteaming near a vibrating bubble	161
3.13	Sound propagation in bubbly liquids	163
	3.13.1 Speed of sound in a bubbly liquid – 3.13.2 The scattered pressure field – 3.13.3 Absorption–scattering cross-section of a gas bubble – 3.13.4 The dynamics of cavity clusters – 3.13.5 Collective phenomena in bubbly liquids	
3.14	Cavitation experimentation	173
	3.14.1 Know thy liquid – 3.14.2 Know thy sound field – 3.14.3 Know when something happens	
	References	179
Chapter Four Hydrodynamic cavitation		187
4.1	Cavitation in a flowing stream	187
	4.1.1 Introduction – 4.1.2 Fixed cavities – 4.1.3 Travelling cavities – 4.1.4 Cavitation in shear flows: wakes – 4.1.5 Supercavities – 4.1.6 Bubble entrainment – 4.1.7 Cavitation in shear flows: vortex cavitation – 4.1.8 Water entry	
4.2	Jets and vortex rings	205
	4.2.1 Jets – 4.2.2 Vortex rings	
4.3	Cavities attached to walls: boiling	215
4.4	Cavitation from hydrofoils	218
4.5	Cavitation from propellers	220
4.6	Cavitation in pumps	222
4.7	Cavitation in water turbines	225
4.8	Cavitation in lubrication: bearings and squeeze films	225
4.9	Cavitation between rotating rollers	232
4.10	Cavitation between gear teeth	237
	4.10.1 Experiments with a gear box – 4.10.2 Experiments with a laboratory rig	
4.11	Cavitation in hydraulic structures	247
	4.11.1 Cavitation in pipes and valves – 4.11.2 The water hammer – 4.11.3 Cavitation in dams and tunnels – 4.11.4 Cavitation in offshore structures	
4.12	Cavitation noise	253
	4.12.1 Propeller cavitation noise – 4.12.2 Hydraulic machine cavitation noise	
4.13	Cavitation erosion	265
	4.13.1 Introduction – 4.13.2 Experiments on cavitation erosion – 4.13.3 Physical mechanisms that cause cavitation erosion – 4.13.4 Results of experiments on cavitation erosion	
4.14	Cavitation in non-Newtonian liquids	291
4.15	Water tunnels	299

4.16 Tensile strength of liquids	301
4.16.1 The Berthelot tube method – 4.16.2 The centrifugal method – 4.16.3 Dynamic stressing of a liquid by the reflection principle – 4.16.4 Dynamic stressing by the <i>ab initio</i> method – 4.16.5 The use of a water shock tube – 4.16.6 Measurements using the drop levitation technique – 4.16.7 Greenspan and Tscheigg's measurements – 4.16.8 Reviews of methods of measuring tensile strengths of liquids – 4.16.9 Effect of tensile strength of water in trees	
References	310
Chapter Five Sonoluminescence	318
5.1 Introduction	318
5.2 Dependence of sonoluminescence of various factors	320
5.2.1 Hydrostatic pressure and the sound pressure amplitude – 5.2.2 Frequency of the sound field – 5.2.3 Temperature – 5.2.4 Role of the solvent	
5.3 Role of the dissolved gas	325
5.4 Spectra of sonoluminescence	332
5.5 Sonoluminescence from hydrodynamic cavitation	335
5.6 Light from agitated mercury	338
5.7 Light from collapsing glass spheres	339
5.8 Theories of sonoluminescence	344
5.9 Sonoluminescence from a 'shuttlecock' associated with a single gas bubble	347
5.10 Observations of sonoluminescence using image intensification	348
5.11 Sonoluminescence from stable cavitation	350
References	350
Chapter Six Sonochemistry	353
6.1 Historical review	353
6.2 Gas reactions	355
6.3 Interfacial reaction: inhibition of H_2O_2 formation	356
6.4 Initiation of polymerization with ultrasound	357
6.5 Evidence for free radicals produced in aqueous solutions by diagnostic ultrasound	360
6.6 Applications of ultrasound to organic chemistry	362
6.7 Organometallic sonochemistry	366
6.8 Chemical effects of pulsed ultrasound	369
References	371

Chapter Seven Bubble spectrum analysers	373
7.1 Introduction	373
7.2 Acoustic methods: absorption of ultrasonic energy	373
7.3 Acoustic methods: attenuation (scattering)	374
7.4 Optical scattering methods	376
7.5 Holographic methods	377
7.6 Coulter counter	381
7.7 Doppler bubble detectors	382
7.8 Second harmonic bubble detectors	382
7.9 Bubble detection by the non-linear mixing of two frequencies	383
7.10 Recent optical detectors	384
7.11 Pressure pulse method	386
7.12 Rise time of free bubbles	386
References	387
Chapter Eight Applications	389
8.1 Physical applications	389
8.2 Biological applications	391
8.3 Medical applications	395
8.4 Industrial applications	398
8.5 Everyday examples of cavitation	402
References	406
Main references	409
Index	412
