

CONTENTS**PREFACE**

xi

CHAPTER 1**STRESS AND STRAIN TRANSFORMATION****1**

1.1 Three-Dimensional Stress Analysis	1
1.2 Principal Stresses and Invariants	5
1.3 Principal Directions as Co-ordinates	9
1.4 Matrix and Tensor Transformations of Stress	16
1.5 Three-Dimensional Strain Transformation	20
1.6 Plane Stress	27
1.7 Plane Strain	32
EXERCISES	36

CHAPTER 2**PLANE ELASTICITY THEORY****43**

2.1 Elastic Constants	43
2.2 Relationship Between Elastic Constants	46
2.3 Cartesian Plane Stress and Plane Strain	48
2.4 Cartesian Stress Functions	53
2.5 Cylindrical Plane Stress and Plane Strain	65
2.6 Polar Stress Functions	69
EXERCISES	86

CHAPTER 3**STRUCTURES WITH SYMMETRY****93**

3.1 Membrane Theory	93
3.2 Thick-Walled Cylinders	101
3.3 Interference Fits	103
3.4 Rotating Cylindrical Bodies	108
3.5 Thick-Walled Sphere under Pressure	118
3.6 Thermal Stresses in Cylindrical Bodies	121
3.7 Thermal Stresses in Spheres	129
References	130
EXERCISES	130

CHAPTER 4

BENDING OF BEAMS AND PLATES 137

4.1 Bending Of Straight Beams	137
4.2 Combined Bending and Direct Stress	140
4.3 Beams with Initial Curvature	143
4.4 Elastic Bending Of Composite Beams	149
4.5 Reinforced Sections (Steel in Concrete)	158
4.6 Asymmetric Bending	165
4.7 Bending of Circular Plates	171
4.8 Rectangular Plates	179
EXERCISES	183

CHAPTER 5

THEORIES OF TORSION 197

5.1 Torsion of Circular Sections	197
5.2 Torsion of Thin Strips	204
5.3 Torsion of Prismatic Bars	208
5.4 Circular Shaft With Variable Diameter	219
5.5 Torsion of Thin-Walled Closed Sections	223
5.6 Wagner-Kappus Torsion of Open Restrained Tubes	231
Bibliography	245
EXERCISES	245

CHAPTER 6

MOMENT DISTRIBUTION 253

6.1 Single Span Beams	253
6.2 Clapeyron's Theorem of Three Moments	256
6.3 The Moment Distribution Method	262
6.4 Continuous Beams	264
6.5 Beams With Misaligned Supports	270
6.6 Moment Distribution for Structures	271
EXERCISES	275

CHAPTER 7

FLEXURAL SHEAR FLOW **281**

7.1 Shear Stress Due to Shear Force in Beams	281
7.2 St Venant Shear in Prismatic Bars	287
7.3 The Shear Centre and Flexural Axis	291
7.4 Shear Flow in Thin-Walled Open Sections	292
7.5 Shear Flow in Thin-Walled Closed Sections	302
7.6 Web-Boom Idealisation for Symmetrical Sections	310
7.7 Web-Boom Idealisation for Asymmetric Sections	319
Bibliography	321
EXERCISES	321

CHAPTER 8

ENERGY METHODS **331**

8.1 Strain Energy and External Work	331
8.2 Castigliano's Theorems	337
8.3 The Principle of Virtual Work	344
8.4 The Principle of Virtual Forces (PVF)	346
8.5 The Unit Load Method (ULM)	351
8.6 Redundant Structures	357
8.7 The Principal of Virtual Displacements (PVD)	367
8.8 The Rayleigh-Ritz Method	372
EXERCISES	377

CHAPTER 9

INSTABILITY OF COLUMNS AND PLATES **389**

9.1 Perfect Euler Strut	389
9.2 Imperfect Euler Struts	393
9.3 Semi-Empirical Approaches	403
9.4 Buckling Theory of Plates	411
9.5 Buckling in Shear	421
9.6 Flexural and Torsional Instability of Thin Open Sections	423
References	429
Bibliography	429
EXERCISES	430

CHAPTER 10

FINITE ELEMENTS 435

10.1 The Stiffness Method	435
10.2 Bar Elements	436
10.3 Energy Methods	442
10.4 Prismatic Torsion	443
10.5 Plane Triangular Element	447
10.6 Plane Rectangular Element	470
10.7 Triangular Elements with Axial Symmetry	473
10.8 Rectangular Element for Plate Flexure	483
10.9 Concluding Remarks	492
References	492
EXERCISES	493

CHAPTER 11

YIELD AND STRENGTH CRITERIA 497

11.1 Yielding of Ductile Isotropic Metals	497
11.2 General Yield Function for Isotropic Metals	506
11.3 Anisotropic Yielding	512
11.4 Fracture Criteria for Brittle Materials	517
11.5 Strength Criteria for Lamina	523
11.6 Comparisons with Experiment	530
11.7 Concluding Remarks	535
References	535
Bibliography	537
EXERCISES	537

CHAPTER 12

PLASTICITY AND COLLAPSE 539

12.1 Elastic-Plastic Bending of Beams	539
12.2 Plastic Collapse of Beams and Frames	544
12.3 Collapse of Structures	555
12.4 Plastic Torsion of Circular Sections	559
12.5 Multiaxial Plasticity	566
12.6 Plasticity with Hardening	575
References	585
EXERCISES	585

CHAPTER 13

CREEP AND VISCO-ELASTICITY 591

13.1 The Creep Curve	591
13.2 Secondary Creep Rate	593
13.3 The Equation of State	597
13.4 Brittle Creep Rupture	601
13.5 Correlation of Uniaxial Creep Data	603
13.6 Creep in Structures	605
13.7 Multiaxial Stress	610
13.8 Visco-elasticity	614
13.9 Design Data	624
References	625
EXERCISES	626

CHAPTER 14

HIGH AND LOW CYCLE FATIGUE 631

14.1 High Cycle Fatigue	631
14.2 The Stress Cycle	632
14.3 Environmental Effects	642
14.4 Low Endurance Fatigue	644
14.5 Creep-Fatigue Interaction	654
References	659
EXERCISES	660

CHAPTER 15

FRACTURE MECHANICS 663

15.1 Blunt Cracks	663
15.2 LEFM	665
15.3 Crack Tip Plasticity	670
15.4 Fracture Toughness Measurement	673
15.5 Energy Balance Approach	676
15.6 Application of LEFM to Fatigue	683
15.7 Application of Fracture Mechanics to Creep Crack Growth	688
References	689
EXERCISES	690

APPENDIX I

PROPERTIES OF AREAS 693

I.1 Centroid and Moments of Area	693
I.2 Parallel and Perpendicular Axes	693
I.3 Principal Second Moments of Area	695
I.4 Matrix Representation	696
I.5 Graphical Solution	696
EXERCISES	703

APPENDIX II

MATRIX ALGEBRA 707

II.1 The Formation of a Matrix	707
II.2 Matrix Addition and Subtraction	707
II.3 Matrix Multiplication	708
II.4 Transpose of a Matrix	709
II.5 The Inverse of a Matrix	709
II.6 Matrix Types	710
II.7 Matrix Operations	711
EXERCISES	711

APPENDIX III

STRESS CONCENTRATIONS 715

III.1 Introduction	715
III.2 Tension and Bending of a Flat Plate with a Central Hole	715
III.3 Tension and Bending of a Flat Plate with a Double U-Notch	716
III.4 Tension of a Flat Plate with Shoulder Fillets	717
III.5 Tension and Bending of a Flat Plate with a U-Notch	718
III.6 Tension, Bending and Torsion of Circular Bars and Tubes with Cross-Bores	719
III.7 Tension, Bending and Torsion of a Solid Bar with a Circumferencial U-Notch	721
III.8 Tension, Bending and Torsion of a Solid Circular Shaft with a Shoulder Fillet	722
III.9 Bending and Torsion of a Shaft with a Keyway	724
Bibliography	724

INDEX 725
