

CONTENTS

Preface	xiii
Foreword of the Editor	xv
Contributing Authors	xix
1 Introduction	1
S C Li	
1.1 Cavitation	1
1.1.1 Discovery	1
1.1.2 Classification	1
1.2 Hydraulic Machinery and Cavitation	3
1.2.1 Problems Caused by Cavitation	3
1.2.2 Combating Cavitation	5
References	8
2 Cavitation and Cavitation Types	9
A J Acosta	
2.1 Cavitation Phenomenon	9
2.1.1 Cavitation	9
2.1.2 Hydrodynamic Cavitation	10
2.2 Types of Cavitation	11
2.2.1 Cavitation Index	11
2.2.2 Scale Effects and Cavitation Types	12
2.3 Cavitation Effects	24
2.3.1 General Phenomena	24
2.3.2 Influences on Machine Performance	25
2.3.3 System Stability	28
2.4 Cavitation Nucleation and Inception	30
2.4.1 Inception	30
2.4.2 Nuclei Measurement	34
2.4.3 Concluding Remarks	38
References	40
3 Bubble Dynamics	47
Part 1: Single Bubble	47
A Shima	
3.1 Rayleigh Analysis	47
3.1.1 Besant's Problem	47

3.1.2 Rayleigh's Solution	48
3.2 Vaporous and Gaseous Bubbles	49
3.2.1 Classification	49
3.2.2 Stability	49
3.3 Viscosity and Compressibility Effects	50
3.3.1 Effects of Viscosity and Surface Tension	50
3.3.2 Compressibility Effect	50
3.4 Bubble Rebound	53
3.4.1 Introduction	53
3.4.2 Studies of Rebound	53
3.5 Nonspherical Collapse and Micro-jet Formation	54
3.5.1 Collapse near Solid Wall	54
3.5.2 Collapse in Contact with Solid Wall	55
3.6 Pressures Generated at Collapse	57
3.6.1 Impact Pressure and Their Modes	57
3.6.2 Temperature Effect	60
References	61
Part 2: Multi-Bubbles (Stochastic Behaviour)	65
S C Li	
3.7 Origins of Bubble Stochasticity	65
3.7.1 Introduction	65
3.7.2 Bubble-Boundary Interaction	67
3.7.3 Bubble-Bubble Interaction	73
3.7.4 Bubble-Flow Field Interaction	94
3.7.5 Remarks	115
3.8 Stochastic Models of Cavitation Bubbles	117
3.8.1 Introduction	117
3.8.2 Single-Event Model	117
3.8.3 Multi-Event (Cluster) Model	118
3.8.4 Comprehensive Model	120
3.9 Power Spectrum	121
3.9.1 Introduction	121
3.9.2 Spectrum of Single-Bubble Collapse	121
3.9.3 Spectrum for Sequence of Single Events	127
3.9.4 Spectrum for Sequence of Clusters	137
3.9.5 Spectrum for Comprehensive Sequence	148
References	153
	157

4 Cavitating Flow	
4.1 General Features	157
H Murai	
4.1.1 Sheet Cavitation	157
4.1.2 Travelling Bubble Cavitation	160
4.1.3 Vortical Cavitation	161
4.1.4 Hydraulic Loss Caused by Cavitation	161
4.2 Hydrofoil and Hydrofoil Cascade	166
H Murai	
4.2.1 Cavitation Characteristics of Hydrofoil	166
4.2.2 Cavitation Characteristics of Conventional Airfoil Sections	170
4.2.3 Cavitation Characteristics of Ogival Hydrofoils	171
4.2.4 Cavitation Characteristics of Hydrofoil Cascade	175
4.2.5 Cavitation Characteristics of Conventional Airfoil and Ogival Profiles	176
4.2.6 Hydrofoil Profile Suitable for Decelerating and Accelerating Cascades	180
4.2.7 Computer Simulation of Partially Cavitating Foil	182
4.2.8 Supercavitating Hydrofoil	184
4.2.9 Supercavitating Hydrofoil Cascade	186
4.3 Control Valves	187
E Outa	
4.3.1 General Features of Control Valve Cavitation	187
4.3.2 Cavitation Pictures of Globe Valve Flows	194
4.3.3 Cavitation Inception due to Vortex Growth	197
4.3.4 Cavitation Erosion and Anti-Cavitation Valves	202
References	205
5 Cavitation Phenomena in Hydraulic Machinery	211
5.1 General Features of Turbine Cavitation	211
H Tanaka	
5.1.1 Cavitation in Francis Turbines	211
5.1.2 Cavitation in Propeller Turbines	220
5.1.3 Cavitation in Pelton Turbines	225
5.1.4 Cavitation in Francis Pump-Turbines	226
5.2 General Features of Pump Cavitation	229
R K Turton	
5.2.1 Introduction	229
5.2.2 General Effect on Pumps	229

5.2.3	Net Positive Suction Head	232
5.2.4	Definition of Critical $NPSH_R$	235
5.2.5	Implications for Pump Design	236
5.2.6	The Role of the Inducer	240
5.3	Pump Cavitation Similarity	242
	V Chebaevsky and V Petrov	
5.3.1	Problem Nature and Similarity Conditions	242
5.3.2	Thermodynamic Property Simulation	248
5.4	Cavitation Detection Techniques	251
	E Egusquiza	
5.4.1	Introduction	251
5.4.2	Generation of Noise and Vibration	252
5.4.3	Propagation	253
5.4.4	Background Noise	254
5.4.5	Cavitation Detection in Frequency Domain	255
5.4.6	Cavitation Detection in Time Domain	259
5.4.7	Cavitation Detection with Time-Frequency Analysis	263
	References	265
6	Cavitation Damage to Hydraulic Machinery	269
6.1	General Mechanism of Cavitation Damage	269
	Y Iwai and T Okada	
6.1.1	Introduction	269
6.1.2	Cavitation Bubble Collapse Pressures and Damage	269
6.1.3	Correlation between Erosion Resistance and Mechanical Property	276
6.2	Cavitation Damage in Turbines	277
	S C Li	
6.2.1	Introduction	277
6.2.2	Propeller and Kaplan Turbines	285
6.2.3	Francis Turbine	286
6.2.4	Pelton Turbine	290
6.2.5	Cavitation Guarantee	292
6.3	Cavitation Damage in Pumps	295
	S C Li	
6.3.1	Introduction	295
6.3.2	Axial Flow Pumps	295
6.3.3	Centrifugal Pumps	296
6.3.4	Pump-turbines	298

6.3.5 Cavitation Guarantee	299
6.4 Silt-Laden Water Effect	302
S C Li	
6.4.1 Introduction	302
6.4.2 Silt Erosion	302
6.4.3 Synergism of Silt and Cavitation Erosions	307
6.5 High Resistance Materials	314
S C Li	
6.5.1 Introduction	314
6.5.2 Fused Materials	314
6.5.3 Non-fused Materials	330
6.6 Repair of Machine	334
S C Li	
6.6.1 Introduction	334
6.6.2 Cause of Damage	334
6.6.3 Main Concerns in Repair	336
6.6.4 Examples	343
References	353
7 Cavitation Caused Vibrations	359
7.1 Cavitation Pressure Pulsation in Turbines	359
7.1.1 Blade Cavity Pulsations	359
J Sato	
7.1.2 Blade Wake Cavitation Pulsations	364
J Sato	
7.1.3 Draft Tube Vortex Core Cavitation Pulsations	364
P Henry	
7.2 Cavitation Induced Pulsations in Pumps	369
7.2.1 Introduction	369
R K Turton	
7.2.2 Characteristics of Cavitation Induced Pulsations	372
Y Tsujimoto	
7.2.3 Mechanisms of Cavitation Induced Pulsations	376
Y Tsujimoto	
7.2.4 Cavitation Characteristics - Mass Flow Gain Factor and Cavitation Compliance	380
Y Tsujimoto	
7.3 Influence of Operating Conditions	383
P Henry	

7.3.1 Preliminary Discussion	383
7.3.2 Part Load Precession	383
7.3.3 80% Load Oscillations	388
7.3.4 Draft Tube Free Oscillations	388
7.3.5 Auto-oscillations	398
7.3.6 Influence of the Test Head	401
7.3.7 Thoma Number	403
7.4 Cavitation Resonance in Hydraulic Machinery Installations	405
P Henry	
7.4.1 Introduction	405
7.4.2 Prototype Installation	405
7.4.3 Model Tests	409
7.4.4 Stability of the Prototype Installation	413
References	417
8 Unsteady Cavitation Flows Caused by Machine Transients	423
Part 1: Turbine Transients	423
C S Martin	
8.1 Introduction	423
8.2 Types of Turbine Cavitation	424
8.2.1 Francis Turbines	424
8.2.2 Kaplan Turbines	432
8.3 Draft-Tube Column Separation Incidents	433
8.4 Physical Modelling of Cavitating Transient Flows	436
8.5 Two-Phase Flow Modelling in Conduits	440
8.5.1 Acoustic Velocity	441
8.5.2 Slug Flow	444
8.6 Analytical Modelling of Cavitating Transient Flows	444
References	445
Part 2: Pump Transients	451
H Tsukamoto	
8.7 Introduction	451
8.8 Transient Cavitation in Discharge Lines	451
8.8.1 Transient Cavitation Type	451
8.8.2 Water Column Separation	453
8.9 Transient Cavitating Flow in Turbopumps	453
8.9.1 True Total Pressure Rise	453
8.9.2 Transient Behaviour of a Cavitating Pump	455
8.9.3 Transient Characteristics of Pump	457

8.10 Computer Simulation of Cavitating Transient Flows in Pump System	460
8.11 Concluding Remarks	461
References	463
