

Contents

Dedication	v
Preface	vii
Acknowledgments.....	xv

1 Introduction

1.1 Foreword	1
1.2 Motivation for Research.....	2
1.3 Chapter Organization	3
1.4 Convention for Units.....	4
1.5 References.....	5

2 Characteristics of High-Intensity Waves

2.1 Foreword	7
2.2 Description of Shock Wave Formation.....	7
2.3 Rankine–Hugoniot Relations	8
2.4 Attenuation Waves	11
2.5 Constitutive Relations	12
2.6 High Pressure Region: Mie–Gruneisen Equation of State	13
2.7 Elastic–Plastic Flow in Uniaxial Strain	15
2.8 Time-Dependent Effects	17
2.8.1 Strain Rate	17
2.8.2 Spallation	18
2.9 References	20

3 Experimental Techniques for Measurement of the Dynamic Properties of Materials

3.1	Introduction	23
3.2	Stress–Strain–Strain-Rate Studies	23
3.3	Uniaxial Stress Tests	24
	3.3.1 Low-Rate Testing	24
	3.3.2 Medium-Rate Testing	24
	3.3.3 High-Rate Testing	26
3.4	Multi-Axial Stress Tests, Biaxial Machine	28
	3.4.1 Confined Pressure Device	29
3.5	High Heating Rate Tests	29
	3.5.1 Heating and Testing Machine	29
	3.5.2 Temperature Measurement	31
	3.5.3 Strain Measurement	32
3.6	Ultrasonics Measurements	34
	3.6.1 Elastic Wave Velocities	35
3.7	Equation of State and Wave Profile Studies	39
3.8	Gas Guns	40
	3.8.1 Compressed-Gas Gun, 102 mm	40
	3.8.2 Compressed-Gas Gun, 63.5 mm	42
	3.8.3 Light-Gas Gun	44
3.9	Instrumentation	47
	3.9.1 X-Cut Quartz Gages	47
	3.9.2 Manganin Gage	51
	3.9.3 Streak Camera Techniques	52
	3.9.4 Laser Velocity Interferometer	55
	3.9.5 Slanted Resistance Wire	57
	3.9.6 Magnetic Wire Gage	58
3.10	Spall Tests	60
	3.10.1 Recovery Tests	61
	3.10.2 Room Temperature Testing	62
	3.10.3 Elevated Temperature Testing	63
	3.10.4 Metallographic Examination	64
3.11	References	66

4 Dynamic Response of Materials at Low and Moderate Stresses (<20 GPa)

4.1	Summary of Results	69
4.1.1	Introduction.....	69
4.1.2	Compressive Wave Behavior.....	72
4.1.3	Elastic Behavior.....	76
4.1.4	Release Wave Behavior.....	77
4.1.5	Fracture.....	79
4.1.6	Degraded Properties.....	80
4.1.7	Check Data.....	82
4.1.8	Summary.....	84
4.2	Measurements of the Dynamic Properties of Alpha Phase Tantalum	85
4.2.1	Introduction.....	85
4.2.2	Material Properties	86
4.2.3	Stress–Strain Studies	88
4.2.4	Elastic Behavior.....	90
4.2.5	Low-Pressure Shock Wave Equation of State for Tantalum.....	96
4.2.6	Ultrasonic Equation of State.....	99
4.2.7	Yield Behavior.....	102
4.2.8	Wave Propagation.....	104
4.2.9	Spall Fracture.....	109
4.2.10	Summary.....	117
4.3	References.....	120

5 Hugoniot Equations of State to 0.5 TPa

5.1	Foreword	125
5.2	Theoretical Considerations	127
5.3	Experimental Techniques.....	130
5.3.1	Instrumentation.....	130
5.3.2	Target Design and Construction	132
5.3.3	Data Analysis.....	137
5.3.4	Shock Wave Velocity	137
5.3.5	Impact Velocity.....	138
5.3.6	Hugoniot of the Impactor.....	139

5.4	Experimental Results	139
	Fansteel-77	140
	OFHC Copper	142
	2024-T4 Aluminum	144
	Depleted Uranium.....	145
	Nickel	147
	Type 304 Stainless Steel	148
	Titanium.....	149
	Beryllium	150
	AZ31B Magnesium.....	151
	Plexiglas (PMMA).....	152
	Quartz Phenolic	152
5.5	Hugoniot Data	153
	5.5.1 Tables of Hugoniot Data.....	153
	5.5.2 Graphs of Hugoniot Data.....	158
5.6	Summary	180
5.7	References.....	184

6 Attenuation of Shock Waves from High Pressure

6.1	Foreword	187
6.2	Introduction.....	188
6.3	Description of the Impact Experiments.....	190
	6.3.1 Design of Experiments	191
	6.3.2 Laser Velocity Interferometer.....	192
	6.3.3 Suppression of Spall	194
	6.3.4 Manganin Wire Gage.....	194
	6.3.5 Stepped Targets with Shims	196
	6.3.6 Wedge Targets	202
6.4	Experimental Results	206
	6.4.1 OFHC Copper	207
	6.4.2 6061-T6 Aluminum	214
	6.4.3 Titanium.....	220
	6.4.4 Beryllium	223
	6.4.5 Uranium Alloy	225
6.5	Conclusions.....	226
6.6	References.....	230

7 Response of Porous Materials to Static and Dynamic Loading

7.1	Introduction	233
7.2	Equation of State Surface.....	233
7.3	Dynamic Behavior.....	235
7.4	The Porous Constitutive Model	235
7.5	Description of the Porous Berylliums.....	238
7.6	Experimental Data.....	239
	7.6.1 Static Compression Data.....	240
	7.6.2 Shock Wave Tests.....	241
7.7	Comparison of Predictions with Data	245
7.8	Electron-Beam Tests	248
	7.8.1 Experiment Design	248
	7.8.2 Experimental Results	250
	7.8.3 Applicability of Experimental Techniques to Other Materials	255
7.9	Summary	256
7.10	References	256

8 Interferometric Methods

8.1	Foreword	257
8.2	The Displacement Interferometer	257
8.3	The Velocity Interferometer.....	258
8.4	The VISAR Interferometer	261
	8.4.1 Glass Etalon Delay Legs.....	263
	8.4.2 Air Delay Legs.....	264
	8.4.3 Extended High Velocity Differential Etalon	265
	8.4.4 Fringe Recording Systems	267
	8.4.5 Increased Stability, Reduced Size.....	267
8.5	Laser Illumination	269
8.6	Photodetectors and Recording Systems	269
8.7	Light Collection Systems	270
	8.7.1 Direct Beam Technique	270
	8.7.2 Fiber Optic Cable Technique.....	270
	8.7.3 Multiple Fiber Technique	270

8.8 VISAR Configurations..... 271
 8.8.1 “Line” VISAR..... 271
 8.8.2 Imaging “White Light” VISARs..... 271
8.9 Summary 272
8.10 References..... 273

Appendix Compendium of Wave Profiles

A.1 Summary 275
 Profiles in Aluminum 276
 Profiles in Titanium..... 302
 Profiles in Tantalum 307
 Profiles in Fused Quartz 317
Index 319
