<i>Preface</i>	v
PART I: Real-Space Finite-Difference Method for First-Principles Calculations	1
1. Foundations of Methodology	3
<i>Tomoya Ono and Kikuji Hirose</i>	
1.1 Real-Space Finite-Difference Method	3
1.2 Density-Functional Theory and Kohn–Sham Equation . . .	4
1.3 Finite-Difference Formulas	6
1.4 Real-Space Representation of Kohn–Sham Equation	7
1.5 Norm-Conserving Pseudopotentials	9
1.6 Hellmann–Feynman Forces Acting on Atoms	12
2. Solvers of the Poisson Equation and Related Techniques	15
<i>Tomoya Ono and Kikuji Hirose</i>	
2.1 The Real-Space Representation of the Poisson Equation . .	15
2.2 The Fuzzy Cell Decomposition and Multipole Expansion Technique	18
2.3 Algorithm to Generate the Fuzzy Cell	20
2.4 Illustration for Efficiency of the Fuzzy Cell Decomposition and Multipole Expansion Method	21
2.5 Conjugate-Gradient Method	22
2.6 Conjugate-Gradient Acceleration	25

2.7	Multigrid Method	25
3.	Minimization Procedures of the Energy Functional	29
	<i>Tomoya Ono and Kikuji Hirose</i>	
3.1	Introduction	29
3.2	Approach of Minimizing the Kohn–Sham Energy Functional	30
3.3	Approach of Minimizing the Kohn–Sham Eigenvalues	32
3.4	Multigrid Method for Minimizing the Kohn–Sham Energy Functional	33
3.5	Fermi-Broadening Technique	34
3.6	Approach of Directly Minimizing the Energy Functional . .	36
3.7	Illustration for Direct Minimization Efficiency	39
3.8	Application of the Direct Minimization: Order- N Calcula- tions for Gold Nanowires	44
4.	Timesaving Double-Grid Technique	47
	<i>Tomoya Ono and Kikuji Hirose</i>	
4.1	Essential Feature of the Timesaving Double-Grid Technique	47
4.2	Illustration of Double-Grid Efficiency	51
4.3	Other Mesh-Refinement Techniques	55
5.	Implementation for Systems under Various Boundary Conditions	57
	<i>Tomoya Ono and Kikuji Hirose</i>	
5.1	Isolated Boundary Condition: Molecules	57
5.2	3D Periodic Boundary Condition: Crystals	59
5.3	(2D Periodic + 1D Isolated) Boundary Condition: Thin Films	63
5.4	(1D Periodic + 2D Isolated) Boundary Condition: Infinite Metallic Wires	69
5.5	Twist Boundary Condition: Infinite Helical Carbon Nanotubes	74
 PART II: Electronic Transport through Nanostruc- tures between Semi-Infinite Electrodes		79
6.	Basic Scheme of the Overbridging Boundary-Matching Method	81
	<i>Yoshitaka Fujimoto, Tomoya Ono and Kikuji Hirose</i>	

6.1	Preliminary Concepts: Ballistic Transport of Electrons and the Landauer Formula	81
6.2	Wave-Function Matching Procedure	85
6.3	Computational Scheme for Generalized Bloch States	
	I. The Generalized Eigenvalue Equation	94
6.4	Computational Scheme for Generalized Bloch States	
	II. The Continued-Fraction Equations	105
6.5	Related Considerations	108
6.6	Application: Sodium Nanowires	118
7.	Inclusion of Norm-Conserving Pseudopotentials	123
	<i>Tomoya Ono and Kikuji Hirose</i>	
	7.1 Treatment of Nonlocal Pseudopotentials	123
	7.2 Application: Aluminum Nanowire	126
8.	Jellium Electrode Approximation	133
	<i>Tomoya Ono and Kikuji Hirose</i>	
	8.1 Generalized Bloch States in Jellium Electrodes	133
	8.2 Application: Helical Gold Nanowires	134
	8.3 Application: Fullerene Chains	139
9.	Green's Function Formalism and the Overbridging Boundary-Matching Scheme	145
	<i>Yoshitaka Fujimoto, Tomoya Ono and Kikuji Hirose</i>	
	9.1 Preliminary Remarks	145
	9.2 Green's Functions in the Discretized Space within the Real-Space Finite-Difference Framework	148
	9.3 Green's Function of a Whole System Including the Transition Region and Two Semi-Infinite Electrodes	156
	9.4 Green's Function Matching in the Overbridging Boundary-Matching Scheme and Related Topics	163
	9.5 Green's Function of a Whole System with a Block-Tridiagonal Hamiltonian Matrix	170

10. Calculation Method Based on the Lippmann–Schwinger Equation	183
<i>Shigeru Tsukamoto and Kikuji Hirose</i>	
10.1 The Lippmann–Schwinger Equation	183
10.2 Correction of Effective Potentials inside Electrodes at a Finite Bias Voltage	190
10.3 Application: Sodium Nanowire under Finite Bias Voltages .	193
Appendix A Formulas for Long-Range Potentials under Various Boundary Conditions	203
<i>Tomoya Ono</i>	
A.1 3D Periodic Boundary Condition	203
A.2 (2D Periodic + 1D Isolated) Boundary Condition	206
A.3 (1D Periodic + 2D Isolated) Boundary Condition	210
A.4 Twist Boundary Condition	214
A.5 Uneven 2D Periodic Boundary Condition	216
A.6 Uneven 3D Periodic Boundary Condition	217
Appendix B Tight-Binding Approach Based on the Over- bridging Boundary-Matching Scheme	219
<i>Kikuji Hirose</i>	
B.1 Generalized Bloch States inside Semi-Infinite Crystalline Electrodes	220
B.2 Wave-Function Matching Procedure	224
B.3 Green’s Function Formalism	226
<i>Bibliography</i>	231
<i>Index</i>	249
