

Contents

<i>Preface</i>	vii
<i>Acknowledgements</i>	ix
1. From Geometry to the Quantum	1
2. Introduction to Lasers	13
2.1 Normal Modes in a Cavity	14
2.2 Basic Properties of Lasers	17
3. Properties of Light: Blackbody Radiation	19
3.1 Planck's Quantum Derivation	20
3.2 The Proper Derivation of Planck's Formula	24
3.3 Fluctuations of Light	26
3.4 Maxwell's Lucifer	32
4. Interaction of Light with Matter I	37
4.1 Stimulated and Spontaneous Emission	39
4.2 Optical Excitation of Two Level Atoms	41
4.3 Life-Time and Amplification	43
5. Basic Optical Processes — Still Classical	45
5.1 Interference and Coherence	45
5.2 Light Pressure	48
5.3 Optical Absorption	51
5.4 Amplification: Three Level Systems	53
5.5 Classical Treatment of Atom-Light Interaction	55
5.5.1 Dipole radiation	56
5.5.2 Radiation damping	57

5.6	Spectral Lines	60
6.	More Detailed Principles of Laser	63
6.1	Basic Theory: Classical Electrodynamics	63
6.2	Mode-Locking	68
6.3	Non-linear Optics	70
6.4	Phase Matching	73
6.4.1	Rigorous derivation	73
6.4.2	Heuristic derivation	76
6.5	Multiphoton Processes	78
7.	Interactions of Light with Matter II	81
7.1	Vector Spaces	81
7.2	Dirac Formalism	84
7.3	Time Dependent Perturbation Theory	87
7.4	Alternative Derivation of Perturbation	92
7.5	The Wigner–Weisskopf Theory	94
7.5.1	Constant perturbation	94
7.5.2	Harmonic perturbation	95
7.6	Digression: Entropy and the Second Law	97
7.7	Einstein’s B Coefficient	100
7.8	Multiphoton Processes Revisited	102
8.	Two Level Systems	105
8.1	Operator Matrix Algebra	105
8.2	Two Level Systems: Rabi Model	107
8.3	Other Issues with Two Level Systems	114
8.4	The Berry Phase	116
8.4.1	Parallel transport	117
8.4.2	The Bloch sphere	119
8.4.3	Implementation	121
8.4.4	Generalization of the phase	124
8.5	Gauge Principle	126
9.	Field Quantization	131
9.1	Quantum Harmonic Oscillator	133
9.2	What Are Photons?	137
9.3	Blackbody Spectrum from Photons	139
9.4	Quantum Fluctuations and Zero Point Energy	140
9.5	Coherent States	142
9.6	Composite Systems — Tensor Product Spaces	146
9.6.1	Beam splitters	147

9.6.2	Generation of coherent states	150
9.7	Bosonic Nature of Light	151
9.8	Polarization: The Quantum Description	153
9.8.1	Unpolarized light — mixed states	154
10.	Interaction of Light with Matter III	157
10.1	Fully Quantized Treatment	157
10.2	Jaynes–Cummings Model	158
10.3	Spontaneous Emission — At Last	163
10.4	The Lamb Shift	164
10.5	Parametric Down Conversion	166
10.6	Quantum Measurement: A Brief Discussion	167
11.	Some Recent Applications of Quantum Optics	171
11.1	Laser Cooling	171
11.1.1	Bose–Einstein condensation	173
11.2	Quantum Information Processing	176
11.2.1	Quantum teleportation	177
12.	Closing Lines	181
13.	Problems and Solutions	183
13.1	Problem and Solutions 1	183
13.1.1	Problem set 1	183
13.1.2	Solutions 1	185
13.2	Problem and Solutions 2	190
13.2.1	Problem set 2	190
13.2.2	Solutions 2	193
13.3	Problems and Solutions 3	197
13.3.1	Problem set 3	197
13.3.2	Solutions 3	199
13.4	Problems and Solutions 4	203
13.4.1	Problem set 4	203
13.4.2	Solutions 4	205
13.5	Problems and Solutions 5	210
13.5.1	Problem set 5	210
13.5.2	Solutions 5	212
	<i>Bibliography</i>	217
	<i>Index</i>	219
