

CONTENTS

Preface v

Chapter 1

Introduction to Silicon Carbide (SiC) Microelectromechanical Systems (MEMS)

Rebecca Cheung

University of Edinburgh

1. Introduction	1
2. SiC Material Properties	3
3. Making a Microelectromechanical (MEM) Device	5
3.1 Micromachining Processes	5
3.1.1. Bulk micromachining	5
3.1.2. Surface micromachining	7
4. Surface Modification	8
5. Frequency Tuning of the SiC MEMS	12
6. Mechanical Testing of the MEMS	14
7. Application Examples	14
8. Summary	15
9. References	15

Chapter 2

Deposition Techniques for SiC MEMS

Christian A. Zorman, Xiao-An Fu and Mehran Mehregany

Case Western Reserve University

1. Introduction	18
2. Deposition Issues Related to SiC for MEMS	19
3. Atmospheric Pressure Chemical Vapor Deposition	21
3.1. Epitaxial 3C-SiC Films	21
3.2. Polycrystalline 3C-SiC Films	26
4. Plasma Enhanced Chemical Vapor Deposition	27
5. Low Pressure Chemical Vapor Deposition	29
5.1. Overview	29

Contents

5.2. Epitaxial 3C-SiC Films	29
5.3. Polycrystalline 3C-SiC Films	31
6. Doping of LPCVD Poly-SiC Films	37
7. Other Deposition Methods	40
8. Conclusions	41
9. References	42

Chapter 3

Review of Issues Pertaining to the Development of Contacts to Silicon Carbide: 1996 – 2002

Lisa M. Porter and Feroz A. Mohammad
Carnegie Mellon University

1. Introduction	46
2. Thermal Stability	46
2.1 Thermal Stability of Ohmic Contacts	46
2.2 Thermal Stability of Rectifying Contacts	57
3. Ohmic Contacts to p-type SiC	64
3.1 Introduction	64
3.2 Al-based Contacts	70
3.3 Al-free Contacts	72
4. Ohmic Contacts Using Nickel	77
4.1 Introduction	77
4.2 Thermodynamics	77
4.3 Phase Formation Sequence	79
4.4 Issues	79
4.5 Mechanisms	85
4.6 Alloying	85
5. Effects of Defects on Schottky Contacts	88
6. Summary	92
7. Acknowledgments	95
8. References	96

Chapter 4

Dry Etching of SiC

S. J. Pearton
University of Florida

1. Introduction	102
-----------------	-----

Contents

2. Basics of Plasma Etching	104
2.1. Plasma Creation	104
2.2. Basic Mechanism of Plasma Etching	105
2.2.1. Sputtering	105
2.2.2. Chemical reaction	106
2.2.3. Ion-assisted plasma etching	106
2.3 Plasma Reactors	108
2.3.1. Ion milling	108
2.3.2. Reactive ion etching (RIE)	108
2.3.3. Electron-cyclotron resonance (ECR)	109
2.3.4. Inductive coupled-plasma (ICP)	110
3. Plasma Etching of Silicon Carbide	111
4. Plasma Chemistries	116
5. Mask Materials	119
6. Recent Developments and Future Trends	122
7. Summary	123
8. References	125

Chapter 5

Design, Performance and Applications of SiC MEMS

Stefan Zappe

Stanford University

1. Introduction	128
1.1. Properties of SiC	130
1.2. Fields of Applications	130
1.3. Available Material Systems	133
1.4. SiC MEMS Fabrication Technologies	137
2. SiC MEMS Devices	138
2.1. Test Structures	139
2.1.1. Young's modulus and residual stress	139
2.1.2. Piezoresistive effect	140
2.1.3. Thermal conductivity	141
2.2. Pressure Sensors	141
2.3. Accelerometers	144
2.4. Resonator Structures	147
2.5. Motors	148
2.6. Wear Resistant Devices	150
2.7. Chemical Sensors	152

Contents

2.7.1.	Field effect gas sensor devices	152
2.7.2.	Microhotplates	156
2.7.3.	Other chemical sensors	158
2.8.	Optical Devices	158
2.8.1.	Light emitting diodes	158
2.8.2.	Photodetectors	159
2.8.3.	Other optical devices	162
2.9.	Radiation Detectors	162
2.10.	RF MEMS	163
2.11.	SiC NEMS	164
3.	Conclusions and Outlook	166
4.	Acknowledgment	169
5.	References	170
6.	Appendix A	181
