

## Contents

Preface	v
<b>Chapter 1 Ken Sevcik as an Advisor and Mentor</b>	<b>1</b>
<i>Ed Lazowska, Satish Tripathi, John Zahorjan and Derek Eager</i>	
<b>Chapter 2 Shadow Servers and Priority Scheduling</b>	<b>7</b>
<i>Jeffrey P. Buzen</i>	
1. Introduction . . . . .	7
2. Single Class Models . . . . .	8
3. Multi-Class Models . . . . .	8
4. Importance of Priorities . . . . .	9
5. The Shadow Server Approximation . . . . .	10
6. Extensions . . . . .	12
7. Comments on Significance . . . . .	13
References . . . . .	14
<b>Chapter 3 On the Chronology of Dynamic Allocation Index Policies: The Pioneering Work of K. C. Sevcik</b>	<b>15</b>
<i>Ed Coffman</i>	
1. Introduction . . . . .	15
2. Sevcik's Smallest-Rank-First Index Policy . . . . .	16
3. Background and Chronology . . . . .	17
4. Examples . . . . .	18
5. Concluding Remarks . . . . .	19
References . . . . .	19

<b>Chapter 4</b>	<b>Operational Analysis</b>	<b>21</b>
	<i>Peter J. Denning</i>	
	1. Introduction . . . . .	21
	2. Dead Cows . . . . .	21
	3. Dead Cows in Markovian Queueing Networks . . . . .	22
	4. The Birth of Operational Analysis . . . . .	24
	5. The Fundamental Assumptions of Operational Analysis . . . . .	25
	6. Controversy . . . . .	28
	7. Salute . . . . .	29
	8. An Historical Footnote . . . . .	29
	References (Published) . . . . .	29
	References (Unpublished Technical Reports) . . . . .	30
	Appendix — Operational Analysis: A Fable . . . . .	31
<b>Chapter 5</b>	<b>Function Approximation by Random Neural Networks with a Bounded Number of Layers</b>	<b>35</b>
	<i>Erol Gelenbe, Zhi-Hong Mao and Yan-Da Li</i>	
	1. Introduction . . . . .	35
	2. The GNN and Its Extensions . . . . .	36
	2.1. The BGNN model . . . . .	38
	3. Approximation of Functions of One Variable by the GNN with a Bounded Number of Layers . . . . .	40
	3.1. Technical premises . . . . .	41
	3.2. BGNN approximation of continuous functions of one variable . . . . .	44
	3.3. CGNN approximation of continuous functions of one variable . . . . .	46
	4. Approximation of Continuous Functions of $s$ Variables . . . . .	49
	5. Conclusions . . . . .	53
	References . . . . .	54
	Appendix: Proof of Technical Lemmas . . . . .	56
<b>Chapter 6</b>	<b>The Achilles' Heel of Computer Performance Modeling and the Model Building Shield</b>	<b>59</b>
	<i>Vittoria De Nitto Personè and Giuseppe Iazeolla</i>	
	1. Introduction . . . . .	59
	2. The Current Status of Model Building . . . . .	60
	3. System Multilevel Description . . . . .	61
	3.1. The system vertical description . . . . .	62
	3.2. The system horizontal description . . . . .	63
	3.3. The system software description . . . . .	64

4. The Multilevel Model Building Method . . . . .	68
4.1. The top-down bottom-up process . . . . .	68
5. Comparison with Existing Approaches . . . . .	71
6. Conclusions . . . . .	72
Acknowledgment . . . . .	72
References . . . . .	73

**Chapter 7 Wireless Network Simulation:  
Towards a Systematic Approach 75**

*Satish K. Tripathi, J. Jobin and Michalis Faloutsos*

1. Introduction . . . . .	76
2. Background and Model . . . . .	78
3. Description of Our Framework . . . . .	79
3.1. System parameters . . . . .	79
3.2. Performance metrics . . . . .	80
3.3. Our framework . . . . .	81
4. Experimental Results . . . . .	82
4.1. Parameters that affect steady state utilization . . . . .	82
4.2. The significance of steady state arrival rate . . . . .	86
4.3. Discussion and applications . . . . .	87
5. Homogeneity . . . . .	90
5.1. Related work . . . . .	91
5.2. Metrics for comparison . . . . .	92
6. Evaluation . . . . .	92
6.1. Cell shape (number of neighbors) . . . . .	92
6.2. User speed . . . . .	96
6.3. User bandwidth requirement . . . . .	97
7. Conclusion . . . . .	98
References . . . . .	99

**Chapter 8 Location- and Power-Aware Protocols  
for Wireless Networks with Asymmetric Links 101**

*Guoqiang Wang, Yongchang Ji, Dan C. Marinescu,  
Damla Turgut and Ladislau Bölöni*

1. Introduction and Motivation . . . . .	102
2. Related Work . . . . .	104
3. The Model of the System . . . . .	106
4. <i>m</i> -Limited Forwarding . . . . .	110
4.1. Simulation study . . . . .	112
5. Routing Protocol . . . . .	118
5.1. Neighbor discovery . . . . .	119
5.2. Location and power update . . . . .	120
5.3. Route discovery . . . . .	120

5.4. Route maintenance . . . . .	121
6. MAC Protocol . . . . .	121
6.1. Topological considerations . . . . .	121
6.2. A solution to the hidden node problem . . . . .	124
6.3. Node status . . . . .	126
6.4. Medium access model . . . . .	126
6.5. A simulation study . . . . .	128
7. Cross-Layer Architecture . . . . .	130
8. Work in Progress . . . . .	131
9. Summary . . . . .	132
Acknowledgments . . . . .	133
References . . . . .	133

**Chapter 9 Multi-Threaded Servers with High Service Time Variation for Layered Queueing Networks** **137**  
*Greg Franks, Murray Woodside and Jerry Rolia*

1. Introduction . . . . .	137
2. Residence Time Expressions . . . . .	138
2.1. MVA waiting time expressions . . . . .	139
3. Accuracy and Computation-Time Comparisons . . . . .	141
4. Example Case Studies . . . . .	143
4.1. Systems management example . . . . .	143
4.2. Electronic bookstore example . . . . .	144
5. Conclusions . . . . .	148
Acknowledgments . . . . .	150
Appendix A. Marginal Probabilities . . . . .	150
Appendix B. de Souza e Silva and Muntz Approximation . . . . .	152
References . . . . .	152

**Chapter 10 Quantiles of Sojourn Times** **155**  
*Peter G. Harrison and William J. Knottenbelt*

1. Introduction . . . . .	156
2. Time Delays in the Single Server Queue . . . . .	158
2.1. Waiting time distribution in the M/G/1 queue . . . . .	158
2.2. Busy periods . . . . .	159
2.3. Waiting times in LCFS queues . . . . .	160
2.4. Waiting times with Processor-Sharing discipline . . . . .	162
3. MM CPP/GE/c G-Queues: Semi-Numerical Laplace Transform Inversion . . . . .	162
4. Time Delays in Networks of Queues . . . . .	166
4.1. Open networks . . . . .	167
4.2. Closed networks . . . . .	169

- 4.2.1 Cyclic networks . . . . . 173
- 4.2.2 Paths with service rates all equal . . . . . 174
- 5. Passage Times in Continuous Time Markov Chains . . . . . 174
  - 5.1. First passage times in CTMCs . . . . . 174
  - 5.2. Uniformization . . . . . 175
  - 5.3. Hypergraph partitioning . . . . . 176
  - 5.4. Parallel algorithm and tool implementation . . . . . 177
  - 5.5. Numerical example . . . . . 179
- 6. Passage Times in Continuous Time Semi-Markov Processes . . . . . 182
  - 6.1. First passage times in SMPs . . . . . 183
  - 6.2. Iterative passage time algorithm . . . . . 185
  - 6.3. Laplace transform inversion . . . . . 186
  - 6.4. Implementation . . . . . 187
  - 6.5. Numerical example . . . . . 187
- 7. Conclusion . . . . . 190
- References . . . . . 191

**Chapter 11 Asymptotic Solutions for Two Non-Stationary Problems in Internet Reliability 195**  
*Yaakov Kogan and Gagan Choudhury*

- 1. Introduction . . . . . 195
- 2. Poisson Approximation for the Number of Failed Routers . . . . . 197
- 3. Asymptotics of Lost Bandwidth . . . . . 200
- References . . . . . 204

**Chapter 12 Burst Loss Probabilities in an OBS Network with Dynamic Simultaneous Link Possession 205**  
*Tzvetelina Battestilli and Harry Perros*

- 1. Introduction . . . . . 205
- 2. Problem Description . . . . . 208
- 3. A Queueing Network Model for an OBS Path . . . . . 209
  - 3.1. The arrival process . . . . . 211
- 4. The Decomposition Algorithm . . . . . 213
  - 4.1. An example . . . . . 213
    - 4.1.1 Analysis of sub-system 1 . . . . . 213
    - 4.1.2 Analysis of sub-system 2 . . . . . 215
    - 4.1.3 The iterative procedure . . . . . 216
  - 4.2. The decomposition algorithm . . . . . 217
  - 4.3. Calculation of the burst loss probability . . . . . 219
- 5. Numerical Results . . . . . 220

6. Conclusions . . . . .	223
References . . . . .	224
<b>Chapter 13 Stochastic Analysis of Resource Allocation in Parallel Processing Systems</b>	<b>227</b>
<i>Mark S. Squillante</i>	
1. Introduction . . . . .	227
2. Model of Parallel Processing Systems . . . . .	230
3. Analysis of Dynamic Spacesharing . . . . .	232
3.1. Irreducibility and stability criterion . . . . .	235
3.2. Special case: Exponential model parameters . . . . .	235
3.3. Performance measures . . . . .	237
4. Analysis of Memory Reference Behavior . . . . .	239
4.1. Program behavior models . . . . .	240
4.2. Intra-locality memory overhead . . . . .	244
4.3. Inter-locality memory overhead . . . . .	245
4.3.1 Calculation of $N_I^*$ . . . . .	246
4.3.2 Calculation of $C_I$ . . . . .	247
4.4. Total memory overhead . . . . .	250
5. Conclusions . . . . .	250
Acknowledgment . . . . .	251
References . . . . .	251
<b>Chapter 14 Periodic Task Cluster Scheduling in Distributed Systems</b>	<b>257</b>
<i>Helen Karatza</i>	
1. Introduction . . . . .	257
2. Model and Methodology . . . . .	260
2.1. System and workload models . . . . .	260
2.2. Scheduling strategies . . . . .	262
2.3. Performance metrics . . . . .	263
2.4. Model implementation and input parameters . . . . .	263
3. Simulation Results and Performance Analysis . . . . .	264
3.1. Normal distribution case . . . . .	264
3.2. Uniform distribution case . . . . .	271
4. Conclusions and Future Research . . . . .	273
References . . . . .	273
