<i>Preface</i>	v
1. The Geometry of the Riemann Curvature Tensor	1
1.1 Introduction	1
1.2 Basic Geometrical Notions	4
1.2.1 Vector spaces with symmetric inner products	4
1.2.2 Vector bundles, connections, and curvature	6
1.2.3 Holonomy and parallel translation	10
1.2.4 Affine manifolds, geodesics, and completeness	11
1.2.5 Pseudo-Riemannian manifolds	12
1.2.6 Scalar Weyl invariants	15
1.3 Algebraic Curvature Tensors and Homogeneity	16
1.3.1 Algebraic curvature tensors	17
1.3.2 Canonical curvature tensors	21
1.3.3 The Weyl conformal curvature tensor	23
1.3.4 Models	24
1.3.5 Various notions of homogeneity	26
1.3.6 Killing vector fields	27
1.3.7 Nilpotent curvature	28
1.4 Curvature Homogeneity – a Brief Literature Survey	28
1.4.1 Scalar Weyl invariants in the Riemannian setting	28
1.4.2 Relating curvature homogeneity and homogeneity	29
1.4.3 Manifolds modeled on symmetric spaces	30
1.4.4 Historical survey	31
1.5 Results from Linear Algebra	32
1.5.1 Symmetric and anti-symmetric operators	32

1.5.2	The spectrum of an operator	32
1.5.3	Jordan normal form	33
1.5.4	Self-adjoint maps in the higher signature setting . . .	34
1.5.5	Technical results concerning differential equations . . .	35
1.6	Results from Differential Geometry	38
1.6.1	Principle bundles	39
1.6.2	Geometric realizability	39
1.6.3	The canonical algebraic curvature tensors	41
1.6.4	Complex geometry	47
1.6.5	Rank 1-symmetric spaces	51
1.6.6	Conformal complex space forms	53
1.6.7	Kähler geometry	54
1.7	The Geometry of the Jacobi Operator	54
1.7.1	The Jacobi operator	55
1.7.2	The higher order Jacobi operator	57
1.7.3	The conformal Jacobi operator	59
1.7.4	The complex Jacobi operator	60
1.8	The Geometry of the Curvature Operator	62
1.8.1	The skew-symmetric curvature operator	62
1.8.2	The conformal skew-symmetric curvature operator . .	65
1.8.3	The Stanilov operator	66
1.8.4	The complex skew-symmetric curvature operator . .	66
1.8.5	The Szabó operator	68
1.9	Spectral Geometry of the Curvature Tensor	69
1.9.1	Analytic continuation	70
1.9.2	Duality	72
1.9.3	Bounded spectrum	75
1.9.4	The Jacobi operator	78
1.9.5	The higher order Jacobi operator	81
1.9.6	The conformal and complex Jacobi operators	82
1.9.7	The Stanilov and the Szabó operators	83
1.9.8	The skew-symmetric curvature operator	84
1.9.9	The conformal skew-symmetric curvature operator . .	86
2.	Curvature Homogeneous Generalized Plane Wave Manifolds	87
2.1	Introduction	87
2.2	Generalized Plane Wave Manifolds	90
2.2.1	The geodesic structure	92
2.2.2	The curvature tensor	93

2.2.3	The geometry of the curvature tensor	94
2.2.4	Local scalar invariants	94
2.2.5	Parallel vector fields and holonomy	96
2.2.6	Jacobi vector fields	96
2.2.7	Isometries	97
2.2.8	Symmetric spaces	99
2.3	Manifolds of Signature $(2, 2)$	101
2.3.1	Immersions as hypersurfaces in flat space	103
2.3.2	Spectral properties of the curvature tensor	105
2.3.3	A complete system of invariants	107
2.3.4	Isometries	109
2.3.5	Estimating $k_{p,q}$ if $\min(p, q) = 2$	114
2.4	Manifolds of Signature $(2, 4)$	115
2.5	Plane Wave Hypersurfaces of Neutral Signature (p, p)	119
2.5.1	Spectral properties of the curvature tensor	123
2.5.2	Curvature homogeneity	128
2.6	Plane Wave Manifolds with Flat Factors	130
2.7	Nikčević Manifolds	135
2.7.1	The curvature tensor	137
2.7.2	Curvature homogeneity	139
2.7.3	Local isometry invariants	141
2.7.4	The spectral geometry of the curvature tensor	145
2.8	Dunn Manifolds	149
2.8.1	Models and the structure groups	151
2.8.2	Invariants which are not of Weyl type	155
2.9	k -Curvature Homogeneous Manifolds I	156
2.9.1	Models	159
2.9.2	Affine invariants	162
2.9.3	Changing the signature	164
2.9.4	Indecomposability	165
2.10	k -Curvature Homogeneous Manifolds II	166
2.10.1	Models	168
2.10.2	Isometry groups	171
3.	Other Pseudo-Riemannian Manifolds	181
3.1	Introduction	181
3.2	Lorentz Manifolds	182
3.2.1	Geodesics and curvature	185
3.2.2	Ricci blowup	187

3.2.3	Curvature homogeneity	188
3.3	Signature (2, 2) Walker Manifolds	193
3.3.1	Osserman curvature tensors of signature (2, 2)	194
3.3.2	Indefinite Kähler Osserman manifolds	196
3.3.3	Jordan Osserman manifolds which are not nilpotent	197
3.3.4	Conformally Osserman manifolds	198
3.4	Geodesic Completeness and Ricci Blowup	201
3.4.1	The geodesic equation	201
3.4.2	Conformally Osserman manifolds	202
3.4.3	Jordan Osserman Walker manifolds	206
3.5	Fiedler Manifolds	206
3.5.1	Geometric properties of Fiedler manifolds	207
3.5.2	Fiedler manifolds of signature (2, 2)	209
3.5.3	Nilpotent Jacobi manifolds of order $2r$	209
3.5.4	Nilpotent Jacobi manifolds of order $2r + 1$	213
3.5.5	Szabó nilpotent manifolds of arbitrarily high order	216
4.	The Curvature Tensor	219
4.1	Introduction	219
4.2	Topological Results	221
4.2.1	Real vector bundles	221
4.2.2	Bundles over projective spaces	222
4.2.3	Clifford algebras in arbitrary signatures	223
4.2.4	Riemannian Clifford algebras	224
4.2.5	Vector fields on spheres	226
4.2.6	Metrics of higher signatures on spheres	226
4.2.7	Equivariant vector fields on spheres	227
4.2.8	Geometrically symmetric vector bundles	228
4.3	Generators for the Spaces \mathcal{Alg}_0 and \mathcal{Alg}_1	229
4.3.1	A lower bound for $\nu(m)$ and for $\nu_1(m)$	231
4.3.2	Geometric realizability	233
4.4	Jordan Osserman Algebraic Curvature Tensors	234
4.4.1	Neutral signature Jordan Osserman tensors	235
4.4.2	Rigidity results for Jordan Osserman tensors	238
4.5	The Szabó Operator	241
4.5.1	Szabó 1-models	242
4.5.2	Balanced Szabó pseudo-Riemannian manifolds	243
4.6	Conformal Geometry	245
4.6.1	The Weyl model	245

4.6.2	Conformally Jordan Osserman 0-models	246
4.6.3	Conformally Osserman 4-dimensional manifolds	247
4.6.4	Conformally Jordan Ivanov–Petrova 0-models	249
4.7	Stanilov Models	251
4.8	Complex Geometry	253
5.	Complex Osserman Algebraic Curvature Tensors	257
5.1	Introduction	257
5.1.1	Clifford families	257
5.1.2	Complex Osserman tensors	258
5.1.3	Classification results in the algebraic setting	259
5.1.4	Geometric examples	260
5.1.5	Chapter outline	261
5.2	Technical Preliminaries	261
5.2.1	Criteria for complex Osserman models	262
5.2.2	Controlling the eigenvalue structure	263
5.2.3	Examples of complex Osserman 0-models	264
5.2.4	Reparametrization of a Clifford family	265
5.2.5	The dual Clifford family	265
5.2.6	Compatible complex models given by Clifford families	266
5.2.7	Linearly independent endomorphisms	269
5.2.8	Technical results concerning Clifford algebras	272
5.3	Clifford Families of Rank 1	276
5.4	Clifford Families of Rank 2	278
5.4.1	The tensor $c_1A_{J_1} + c_2A_{J_2}$	279
5.4.2	The tensor $c_0A_{\langle \cdot, \cdot \rangle} + c_1A_{J_1} + c_2A_{J_2}$	286
5.5	Clifford Families of Rank 3	288
5.5.1	Technical results	288
5.5.2	The tensor $A = c_1A_{J_1} + c_2A_{J_2} + c_3A_{J_3}$	291
5.5.3	The tensor $A = c_0A_{\langle \cdot, \cdot \rangle} + c_1A_{J_1} + c_2A_{J_2} + c_3A_{J_3}$	292
5.6	Tensors $A = c_1A_{J_1} + \dots + c_\ell A_{J_\ell}$ for $\ell \geq 4$	295
5.7	Tensors $A = c_0A_{\langle \cdot, \cdot \rangle} + c_1A_{J_1} + \dots + c_\ell A_{J_\ell}$ for $\ell \geq 4$	301
6.	Stanilov–Tsankov Theory	309
6.1	Introduction	309
6.1.1	Jacobi Tsankov manifolds	310
6.1.2	Skew Tsankov manifolds	311
6.1.3	Stanilov–Videv manifolds	312

- 6.1.4 Jacobi Videv manifolds and 0-models 313
- 6.2 Riemannian Jacobi Tsankov Manifolds and 0-Models 313
 - 6.2.1 Riemannian Jacobi Tsankov 0-models 314
 - 6.2.2 Riemannian orthogonally Jacobi Tsankov 0-models 315
 - 6.2.3 Riemannian Jacobi Tsankov manifolds 322
- 6.3 Pseudo-Riemannian Jacobi Tsankov 0-Models 323
 - 6.3.1 Jacobi Tsankov 0-models 324
 - 6.3.2 Non Jacobi Tsankov 0-models with $\mathcal{J}_x^2 = 0 \forall x$ 325
 - 6.3.3 0-models with $\mathcal{J}_x \mathcal{J}_y = 0 \forall x, y \in V$ 326
 - 6.3.4 0-models with $\mathcal{A}_{xy} \mathcal{A}_{zw} = 0 \forall x, y, z, w \in V$ 328
- 6.4 A Jacobi Tsankov 0-Model with $\mathcal{J}_x \mathcal{J}_y \neq 0$ for some x, y 331
 - 6.4.1 The model \mathfrak{M}_{14} 333
 - 6.4.2 A geometric realization of \mathfrak{M}_{14} 338
 - 6.4.3 Isometry invariants 340
 - 6.4.4 A symmetric space with model \mathfrak{M}_{14} 343
- 6.5 Riemannian Skew Tsankov Models and Manifolds 345
 - 6.5.1 Riemannian skew Tsankov models 347
 - 6.5.2 3-dimensional skew Tsankov manifolds 349
 - 6.5.3 Irreducible 4-dimensional skew Tsankov manifolds 351
 - 6.5.4 Flats in a Riemannian skew Tsankov manifold 353
- 6.6 Jacobi Videv Models and Manifolds 356
 - 6.6.1 Equivalent properties characterizing Jacobi Videv models 357
 - 6.6.2 Decomposing Jacobi Videv models 359
