

# Contents

Preface	vii
1. Macroscopic Current Flow	1
1.1. The Classical (Drude) Model of Electronic Conduction and Ohm's Law	2
1.2. The Quantum (Free-Electron) Model of Electronic Conduction	4
1.3. The Nearly-Free Electron Model of Electronic Conduction and Band Structure	13
1.4. Effective Mass	21
1.5. The Origins of Electrical Resistance	24
1.6. Size Effects on Electrical Resistance	31
1.7. Overview of Transistors	32
1.8. Surface Effects	36
2. Quantum Current Flow	41
2.1. Why Shrink Devices?	44
2.2. Point Contacts: From Mesoscopic to Atomic	46
2.3. Conductance from Transmission	48
2.4. Calculation of Transmission Probability and Current Flow in Quantum Systems	55
2.4.1. Introduction to the concept of transmission probability	55

2.4.2. Single potential step .....	57
2.4.3. Single potential barrier .....	61
2.4.3.1. Symmetric barrier: No applied voltage .....	61
2.4.3.2. Asymmetric barrier: Current flow due to applied bias .....	66
2.4.4. Double potential barrier .....	69
2.4.4.1. Symmetric barriers: No applied voltage .....	69
2.4.4.2. Tunnelling through multiple barriers with no phase coherence .....	74
2.4.4.3. Asymmetric barriers: Applied voltage .....	78
2.4.4.4. Resonant tunnelling devices: Further details .....	82
2.4.5. A more realistic calculation for a single potential barrier: The WKB approximation .....	85
2.5. Techniques for the Fabrication of Quantum Nanostructures .....	92
3. Mesoscopic Transport: Between the Nanoscale and the Macroscale .....	99
3.1. Introduction .....	99
3.2. Boltzmann Transport Equation .....	100
3.3. Resistivity of Thin Films and Wires: Surface Scattering .....	100
3.3.1. General principles .....	100
3.3.2. 1D confinement: Thin film .....	103
3.3.3. 2D confinement: Rectangular wire .....	105
3.3.4. 2D confinement: Cylindrical wires .....	106
3.4. Resistivity of Thin Films and Wires: Grain-Boundary Scattering .....	107
3.5. Experimental Aspects: How to Measure the Resistance of a Thin Film .....	113
4. Scanning-Probe Multimeters .....	119
4.1. Scanning-Probe Microscopy: An Introduction .....	119

4.2. Scanning Tunnelling Microscopy .....	121
4.2.1. Basic principles .....	121
4.2.2. Scanning tunnelling microscopy in practise.....	126
4.3. Atomic Force Microscopy .....	134
4.3.1. Modes of operation of AFM.....	135
4.3.2. Kelvin-probe force microscopy.....	140
4.3.3. Conducting mode AFM.....	143
5. Electromigration: How Currents Move Atoms, and Implications for Nanoelectronics .....	155
5.1. Introduction to Electromigration, Wire Morphology.....	155
5.2. Fundamentals of Electromigration — The Electron Wind .....	156
5.3. Electromigration-Induced Stress in a Nanowire Device.....	158
5.4. Current-Induced Heating in a Nanowire Device .....	160
5.5. Diffusion of Material, Importance of Surfaces, Failure of Wires.....	167
5.6. Experimental Observations of Electromigration and Heating in Nanowires .....	169
5.6.1. Failure as a function of wire length.....	170
5.6.2. Failure as a function of wire width.....	170
5.7. Experimental Observations of Electromigration in Micron-Scale Wires.....	173
5.8. Wire Heating — Additional Considerations.....	174
5.9. Consequences for Nanoelectronics .....	181
6. Elements of Single-Electron and Molecular Electronics .....	185
6.1. Single-Electron Transport and Coulomb Blockade .....	185
6.2. Molecular Electronics: Why Bother?.....	188
6.3. Mechanisms of Electron Transport Through Molecules.....	190
6.4. Visualising Transport Through Molecules .....	192
6.5. The Contact Resistance Problem .....	193
6.6. Contacting Molecules .....	194

6.6.1. Nanogaps formed by electron-beam lithography .....	195
6.6.2. Nanogaps formed by electromigration .....	195
6.6.3. Mechanically-controlled break junctions .....	198
6.6.4. Molecular sandwiches .....	200
6.6.5. STM probing of molecules.....	201
6.7. The Future.....	202
Solutions to Problems in Chapter 2.....	207
Index .....	209
