Foreword	v
1. Introduction of MIMO Channel and Space-Time Block Code.....	1
1.1 MIMO Channel for Wireless Communications	2
1.2 Transmit Diversity with Space-Time Block Code	6
1.3 Notations and Abbreviations.....	9
1.4 Signal Model of MIMO Channel and STBC	11
1.4.1 Signal model of MIMO channel.....	11
1.4.2 Signal model of STBC	13
1.5 Design Criteria and Performance Measure of STBC	17
2. Orthogonal and Quasi-Orthogonal Space-Time Block Code	20
2.1 Orthogonal Space-Time Block Code	20
2.1.1 Benefits of O-STBC	20
2.1.2 Background of amicable orthogonal design	22
2.1.3 Construction of O-STBC and its rate limitation.....	25
2.2 Quasi-Orthogonal Space-Time Block Code.....	28
2.2.1 Approaching capacity with low decoding complexity	29
2.2.2 Performance optimization of QO-STBC	35
2.2.3 Remark	39
3. Insights of QO-STBC	40
3.1 Algebraic Structure of QO-STBC.....	40
3.1.1 Decoding complexity of a QO-STBC	41
3.1.2 Maximal symbol-wise diversity of a QO-STBC	44
3.2 Generalized Decoding Framework of QO-STBC	44
3.3 Impact of Constellation Rotation on the Decoding Complexity of QO-STBC	51
3.3.1 Simplified QO-STBC model with real symbols only.....	51
3.3.2 Decoding complexity of QO-STBC with CR.....	53
3.4 Group-Constrained Linear Transformation.....	57
3.4.1 Definition of GCLT	57

3.4.2	Optimization of GCLT parameters.....	59
3.4.3	Performance comparison.....	67
3.5	Chapter Summary	72
4.	Quasi-Orthogonal Space-Time Block Code with Minimum Decoding Complexity.....	73
4.1	Algebraic Structure of MDC-QOSTBC.....	74
4.2	Square MDC-QOSTBC Design	76
4.2.1	Definition of preferred AOD pair.....	76
4.2.2	Relationship between MDC-QOSTBC and AOD through preferred AOD pair	78
4.2.3	Lower bound on the code rate for square design.....	81
4.2.4	Construction of preferred AOD pair.....	85
4.3	Construction of MDC-QOSTBC from O-STBC.....	92
4.3.1	Construction method	93
4.3.2	Performance optimization	96
4.3.3	Non-square MDC-QOSTBC design.....	102
4.4	Performance Results	108
4.5	Chapter Summary	111
5.	Differential QO-STBC	112
5.1	DSTM Codeword Model and Design Criteria	112
5.2	Unitary DSTM Based on QO-STBC.....	114
5.2.1	Literature review	114
5.2.2	Signal model of unitary DSTM scheme	114
5.2.3	Double-symbol-decodable unitary DSTM.....	116
5.2.4	Performance comparison.....	122
5.2.5	Section summary	125
5.3	Quasi-Unitary DSTM Based on MDC-QOSTBC.....	125
5.3.1	Literature review	125
5.3.2	Signal model of quasi-unitary DSTM scheme	126
5.3.3	Single-symbol-decodable quasi-unitary DSTM.....	128
5.4	Chapter Summary	140
6.	Rate, Complexity and Diversity Trade-Off in QO-STBC.....	141
6.1	QO-STBC with Rate ≤ 1	141
6.1.1	Introduction	141
6.1.2	Full-rate 4Gp-QOSTBC	142
6.1.3	Rate-complexity-diversity tradeoff	149
6.1.4	Section summary	150

6.2 QO-STBC with Rate > 1	151
6.2.1 Introduction	151
6.2.2 Code search methodology	151
6.2.3 Graph modelling and modified depth first search for implementing step (b).....	154
6.2.4 Code search results	160
6.2.5 Section summary	168
6.3 Chapter Summary	169
7. Other Developments and Applications of QO-STBC	170
7.1 Other Developments of QO-STBC	170
7.1.1 Closed-loop QO-STBC	170
7.1.2 Concatenation of QO-STBC with error correction code ..	172
7.1.3 Super space-time trellis code based on QO-STBC.....	172
7.1.4 QO-STBC in frequency selective fading channel	173
7.2 QO-STBC in Communication Standards	173
8. Conclusions	177
APPENDIX A	180
APPENDIX B	181
BIBLIOGRAPHY	184
