<i>Preface</i>	vii
1. Introduction	1
1.1 Aim of this book	1
1.2 Evolution of wireless communications	3
1.2.1 Pioneering era of wireless communications	4
1.2.2 First generation (1G) cellular systems	5
1.2.3 Second generation (2G) cellular systems	6
1.2.4 Third generation (3G) cellular systems	7
1.2.5 Wireless local and personal area networks	8
1.2.6 Wireless metropolitan area networks	11
1.2.7 Next generation wireless broadband systems	13
1.3 Historical notes on multicarrier transmissions	14
1.4 Outline of this book	15
2. Fundamentals of OFDM/OFDMA Systems	17
2.1 Mobile channel modeling	17
2.1.1 Parameters of wireless channels	18
2.1.2 Categorization of fading channels	27
2.2 Conventional methods for channel fading mitigation	33
2.2.1 Time-selective fading	34
2.2.2 Frequency-selective fading	34
2.3 OFDM systems	37
2.3.1 System architecture	37
2.3.2 Discrete-time model of an OFDM system	40
2.4 Spectral efficiency	44

2.5	Strengths and drawbacks of OFDM	45
2.6	OFDM-based multiple-access schemes	46
2.7	Channel coding and interleaving	48
3.	Time and Frequency Synchronization	51
3.1	Sensitivity to timing and frequency errors	52
3.1.1	Effect of timing offset	54
3.1.2	Effect of frequency offset	58
3.2	Synchronization for downlink transmissions	61
3.2.1	Timing acquisition	62
3.2.2	Fine timing tracking	67
3.2.3	Frequency acquisition	69
3.2.4	Frequency tracking	72
3.3	Synchronization for uplink transmissions	76
3.3.1	Uplink signal model with synchronization errors	78
3.3.2	Timing and frequency estimation for systems with subband CAS	81
3.3.3	Timing and frequency estimation for systems with interleaved CAS	84
3.3.4	Frequency estimation for systems with generalized CAS	88
3.4	Timing and frequency offset compensation in uplink transmissions	95
3.4.1	Timing and frequency compensation with subband CAS	96
3.4.2	Frequency compensation through interference cancellation	100
3.4.3	Frequency compensation through linear multiuser detection	101
3.4.4	Performance of frequency correction schemes	104
4.	Channel Estimation and Equalization	107
4.1	Channel equalization	108
4.2	Pilot-aided channel estimation	111
4.2.1	Scattered pilot patterns	112
4.2.2	Pilot distances in time and frequency directions	113
4.2.3	Pilot-aided channel estimation	114
4.2.4	2D Wiener interpolation	115

4.2.5	Cascaded 1D interpolation filters	117
4.3	Advanced techniques for blind and semi-blind channel estimation	125
4.3.1	Subspace-based methods	126
4.3.2	EM-based channel estimation	129
4.4	Performance comparison	133
5.	Joint Synchronization, Channel Estimation and Data	
	Symbol Detection in OFDMA Uplink	135
5.1	Uncoded OFDMA uplink	136
5.1.1	Signal model	136
5.1.2	Iterative detection and frequency synchronization	137
5.1.3	Practical adjustments	144
5.1.4	Performance assessment	146
5.2	Trellis-coded OFDMA uplink	150
5.2.1	Signal model for coded transmissions	150
5.2.2	Iterative detection and frequency synchronization with coded transmissions	152
5.2.3	Performance assessment	157
6.	Dynamic Resource Allocation	159
6.1	Resource allocation in single-user OFDM systems	160
6.1.1	Classic water-filling principle	161
6.1.2	Rate maximization and margin maximization	166
6.1.3	Rate-power function	167
6.1.4	Optimal power allocation and bit loading under BER constraint	168
6.1.5	Greedy algorithm for power allocation and bit loading	171
6.1.6	Bit loading with uniform power allocation	173
6.1.7	Performance comparison	176
6.1.8	Subband adaptation	178
6.1.9	Open-loop and closed-loop adaptation	179
6.1.10	Signaling for modulation parameters	180
6.2	Resource allocation in multiuser OFDM systems	182
6.2.1	Multiaccess water-filling principle	184
6.2.2	Multiuser rate maximization	188
6.2.3	Max-min multiuser rate maximization	190

6.2.4	Multuser margin maximization	192
6.2.5	Subcarrier assignment through average channel signal-to-noise ratio	194
6.3	Dynamic resource allocation for MIMO-OFDMA	197
6.4	Cross-layer design	199
7.	Peak-to-Average Power Ratio (PAPR) Reduction	201
7.1	PAPR definitions	202
7.2	Continuous-time and discrete-time PAPR	203
7.3	Statistical properties of PAPR	206
7.4	Amplitude clipping	208
7.4.1	Clipping and filtering of oversampled signals	209
7.4.2	Signal-to-clipping noise ratio	214
7.4.3	Clipping noise mitigation	217
7.5	Selected mapping (SLM) technique	219
7.6	Partial transmit sequence (PTS) technique	223
7.7	Coding	228
7.8	Tone reservation and injection techniques	232
7.8.1	Tone reservation (TR)	232
7.8.2	Tone injection (TI)	234
7.9	PAPR reduction for OFDMA	237
7.9.1	SLM for OFDMA	238
7.9.2	PTS for OFDMA	238
7.9.3	TR for OFDMA	238
7.10	Design of AGC unit	239
	<i>Bibliography</i>	243
	<i>Index</i>	255
