<i>Acknowledgements</i>	xvii
<i>Preface</i>	xix
1. Setting the Scene	1
1.1. Introduction	1
1.2. Light and Heat: Kirchhoff's 'Black-body Radiation'	2
1.3. Kirchhoff's Work on Optical Spectra	4
1.4. Planck's Route to Tackling the Black-body Radiation Problem	5
1.5. Light and the Aether	6
1.6. Post 1900	7
2. Light: The 'Aether' and the Special Theory of Relativity	11
2.1. Introduction	11
2.2. The 'Aether'	13
2.2.1. The stellar 'aberration of light'	13
2.2.2. Arago's experiments	14
2.2.3. Fresnel's 'drag' mechanism (1818)	15
2.2.4. The 1887 Michelson–Morley experiment	15
2.2.5. The FitzGerald contraction	16
2.2.6. The Lorentz contraction	16
2.3. Einstein's Special Theory of Relativity (1905)	17
2.3.1. Introduction: reference frame transformations	17
2.3.2. Energy and momentum	23
3. Thermal Radiation and Planck's 'Energy Elements'	26
3.1. Introduction	26

3.2. Planck and ‘Energy Elements’	32
3.2.1. Introduction: background	32
3.2.2. Stage 1	34
3.2.3. Stage 2: Planck’s final distribution function	39
3.2.4. Summary of the main features of Planck’s final derivation of the distribution function	45
4. Einstein and the Quantum	48
4.1. Introduction	48
4.2. Overview	49
4.3. Volume Dependence of Entropy: Light Quanta and the Photoelectric Effect	56
4.4. Fluctuations	62
4.4.1. Energy fluctuations	62
4.4.2. Momentum fluctuations	65
4.5. Statistics: Planck’s Radiation Formula and Specific Heat Theory	66
5. The Quantum in the Atom: Optical Spectra	69
5.1. Introduction	69
5.2. Classical Mechanics of an Electron in a Circular Atomic Orbit	71
5.3. The Quantum is Introduced: The Correspondence Principle	72
6. Einstein’s Transition Probabilities: Bohr’s Theory and Planck’s Law	80
7. Wave Mechanics	85
7.1. Introduction	85
7.2. de Broglie’s Matter Waves	86
7.2.1. Freely moving particles	87
7.2.2. Orbital electrons as waves	91
7.3. Schrödinger’s Wave Mechanics	93
7.3.1. Introduction	93
7.3.2. Background rôle of Einstein’s Gas Theory	95

7.3.3.	Classical wave optics and geometrical optics compared: a note	98
7.3.4.	Fermat's principle of least time	99
7.3.5.	Maupertuis's principle of least action	101
7.3.6.	Hamilton's mechanics and Schrödinger's wave mechanics	103
7.3.7.	Schrödinger's time-independent wave equation of 1926	105
7.3.8.	Schrödinger's time-dependent equation	112
7.3.9.	The probabilistic interpretation of the wave equation	116
7.3.10.	Operator representations	119
7.4.	Relativistic Wave Equation: The Dirac Equation	120
8.	Matrix Mechanics	124
8.1.	Introduction	124
8.2.	Heisenberg's Approach	126
8.2.1.	Heisenberg invokes the correspondence principle	128
8.2.2.	Outside the range of the correspondence principle	130
8.3.	The Reconciliation of Matrix Mechanics and Wave Mechanics	132
8.4.	Dirac and Matrix Mechanics	133
9.	Complementarity, the Uncertainty Principle, and the Copenhagen Interpretation	135
9.1.	Introduction	135
9.2.	Heisenberg's Uncertainty Principle	138
9.3.	The Como Meeting and the 'Copenhagen Interpretation'	142
9.4.	Copenhagen Interpretation Challenged	146
9.4.1.	Background	146
9.4.2.	Einstein's objections	150

10. Indeterminacy and Entanglement (Sara M. McMurry)	159
10.1. Introduction	159
10.2. Entangled Pairs of Particles and Bell's Inequality	161
10.2.1. Photon polarisation and indeterminacy	162
10.2.2. An EPR experiment with photons	166
10.2.3. Hidden variables and Bell's Inequality	168
10.2.4. Experimental tests of Bell's Inequality	172
10.3. Quantum Information Theory	173
10.3.1. Quantum computing	175
10.3.2. Quantum cryptography	176
10.3.3. Quantum cloning and quantum teleportation	177
10.4. The Quantum Measurement Problem	179
10.4.1. Schrödinger's Cat and the collapse of the wave function	180
10.5. Further Reading	183

Appendices

A. Entropy	184
B. Classical Thermodynamics; Kinetic Theory; Statistical Mechanics; Statistical Thermodynamics	191
C. Phase Space	196
D. A Note on Rayleigh's Radiation Formula	204
E. Debye: Specific Heat Theory of Solids and Derivation of Planck's Radiation Formula	206
F. The Photoelectric Effect	209
G. The General Wave Equation; Wave Groups; Dispersion	211
H. The Harmonic and Anharmonic Oscillator	214

I. Chronology of Main Developments Leading to the Copenhagen Interpretation	219
J. Biographical Notes: The Central Characters	223
<i>Bibliography</i>	231
<i>References</i>	238
<i>Index</i>	247
