Preface	xiii
1 Fermat's ray optics	1
1.1 Fermat's principle	1
1.1.1 Eikonal equation	2
1.1.2 Huygens wave fronts	5
1.1.3 The eikonal equation for mirages	11
1.2 Hamiltonian formulation of ray optics	12
1.2.1 Geometry, phase space and the ray path	13
1.2.2 Legendre transformation	15
1.2.3 Paraxial optics and classical mechanics	18
1.3 Hamiltonian form of optical transmission	19
1.3.1 Translation invariant media	22
1.3.2 Axisymmetric, translation-invariant materials	23
1.3.3 Hamiltonian optics equations, polar coordinates	25
1.3.4 Geometric phase for Fermat's principle	26
1.3.5 Skewness	27
1.3.6 Lagrange invariant: Poisson bracket relations	30
1.4 Axisymmetry	33
1.5 Geometric picture in \mathbb{R}^3	35
1.5.1 Flows of Hamiltonian vector fields	37
1.6 Symplectic matrices	41
1.7 Lie algebras	46
1.7.1 Definitions	46
1.7.2 Structure constants	47
1.7.3 Commutator tables	48

1.7.4	Poisson brackets among axisymmetric variables	49
1.7.5	Non-canonical \mathbb{R}^3 Poisson bracket for ray optics	50
1.8	Equilibrium solutions	52
1.8.1	Energy-Casimir stability	52
1.9	Momentum maps	55
1.9.1	The action of $Sp(2, \mathbb{R})$ on $T^*\mathbb{R}^2 \simeq \mathbb{R}^2 \times \mathbb{R}^2$	55
1.9.2	Summary: Properties of momentum maps	58
1.10	Lie-Poisson brackets	61
1.10.1	The \mathbb{R}^3 -bracket for ray optics is Lie-Poisson	61
1.10.2	Lie-Poisson brackets with quadratic Casimirs	62
1.11	Divergenceless vector fields	66
1.11.1	Jacobi identity	66
1.11.2	Geometric forms of Poisson brackets	69
1.11.3	Nambu brackets	71
1.12	Geometry of solution behaviour	72
1.12.1	Restricting axisymmetric ray optics to level sets	72
1.12.2	Geometric phase on level sets of $S^2 = p_\phi^2$	75
1.13	Singular ray optics in anisotropic media	76
1.14	Ten geometrical features of ray optics	80
2	Newton, Lagrange, Hamilton	85
2.1	Newton	85
2.1.1	Newton's Laws	87
2.1.2	Dynamical quantities	89
2.1.3	Newtonian form of free rigid rotation	92
2.2	Lagrange	95
2.2.1	Basic definitions for manifolds	96
2.2.2	Euler-Lagrange equations on manifolds	100
2.2.3	Geodesic motion on Riemannian manifolds	104
2.2.4	Euler's equations for motion of a rigid body	108
2.3	Hamilton	111
2.3.1	Legendre transform	112
2.3.2	Hamilton's canonical equations	113
2.3.3	Phase space action principle	114
2.3.4	Poisson brackets	116
2.3.5	Canonical transformations	117
2.3.6	Flows of Hamiltonian vector fields	118

2.3.7	Properties of Hamiltonian vector fields	120
2.4	Comparing approaches	122
2.4.1	Comparing standard mechanics approaches	122
2.5	Rigid-body motion	124
2.5.1	Hamiltonian form of rigid-body motion	124
2.5.2	Lie-Poisson Hamiltonian rigid-body dynamics	125
2.5.3	Geometry of rigid-body level sets in \mathbb{R}^3	127
2.5.4	Rotor and pendulum	129
2.5.5	Reductions in the Maxwell-Bloch system	134
3	Differential forms	135
3.1	Symplectic manifolds	135
3.2	Preliminaries for exterior calculus	137
3.2.1	Manifolds and bundles	137
3.2.2	Contraction	138
3.2.3	Hamilton-Jacobi equation	143
3.3	Lie derivatives	144
3.3.1	Exterior calculus with differential forms	144
3.3.2	Pull-back and push-forward notation	146
3.3.3	Wedge product of differential forms	147
3.3.4	Pull-back and push-forward of differential forms	148
3.3.5	Summary of differential-form operations	149
3.3.6	Contraction, or interior product	150
3.3.7	Exterior derivative	154
3.3.8	Exercises in exterior calculus operations	155
3.4	Lie derivative	158
3.4.1	Poincaré's theorem	158
3.4.2	Lie derivative exercises	160
3.5	Ideal fluid dynamics	162
3.5.1	Euler's fluid equations	162
3.5.2	Lamb surfaces	165
3.5.3	Helicity in incompressible fluids	168
3.5.4	Silberstein-Ertel theorem for potential vorticity	172
3.6	Hodge star operator on \mathbb{R}^3	176
3.7	Poincaré's Lemma	179

4	Resonances and S^1 reduction	185
4.1	Coupled oscillators on \mathbb{C}^2	185
4.1.1	Oscillator variables in \mathbb{C}^2	185
4.1.2	The 1 : 1 resonant action of S^1 on \mathbb{C}^2	187
4.1.3	The S^1 -invariant Hermitian coherence matrix	188
4.1.4	The Poincaré sphere $S^2 \in S^3$	189
4.1.5	1 : 1 resonance: Quotient map and orbit manifold	191
4.1.6	The basic qubit: Quantum computing in the Bloch ball	192
4.2	The action of $SU(2)$ on \mathbb{C}^2	194
4.2.1	Coherence dynamics for the 1 : 1 resonance	197
4.2.2	Poisson brackets on the surface of a sphere	198
4.2.3	Riemann projection of Poincaré sphere	199
4.3	Geometric and dynamic phases	202
4.3.1	Geometric phase	203
4.3.2	Dynamic phase	203
4.3.3	Total phase	204
4.4	Kummer shapes for $n : m$ resonances	205
4.4.1	Poincaré map analog for $n : m$ resonances	209
4.4.2	The $n : m$ resonant orbit manifold	209
4.4.3	$n : m$ Poisson bracket relations	215
4.4.4	Nambu, or \mathbb{R}^3 -bracket for $n : m$ resonance	216
4.5	Optical travelling-wave pulses	217
4.5.1	Background	217
4.5.2	Hamiltonian formulation	219
4.5.3	Stokes vectors in polarisation optics	220
4.5.4	Further reduction to the Poincaré sphere	223
4.5.5	Bifurcation analysis	225
4.5.6	Nine regions in the (λ, β) parameter plane	227
5	Elastic spherical pendulum	231
5.1	Introduction and problem formulation	231
5.1.1	Problem statement, approach and results	232
5.1.2	History of the problem	232
5.2	Equations of motion	233
5.2.1	Approaches of Newton, Lagrange and Hamilton	233

5.2.2	Averaged Lagrangian technique	243
5.2.3	A brief history of the three-wave equations . . .	246
5.2.4	A special case of the three-wave equations . . .	247
5.3	Reduction and reconstruction	248
5.3.1	Phase portraits	250
5.3.2	Geometry of the motion for fixed J	252
5.3.3	Geometry of the motion for $H = 0$	252
5.3.4	Three-wave surfaces	253
5.3.5	Precession of the swing plane	256
6	Maxwell-Bloch equations	259
6.1	Self-induced transparency	259
6.1.1	The Maxwell-Schrödinger Lagrangian	260
6.1.2	Envelope approximation	261
6.1.3	Averaged Lagrangian for envelope equations . . .	262
6.1.4	Complex Maxwell-Bloch equations	263
6.1.5	Real Maxwell-Bloch equations	264
6.2	Classifying Lie-Poisson structures	265
6.2.1	Lie-Poisson structures	266
6.2.2	Classes of Casimir functions	268
6.3	Reductions to two dimensions	271
6.4	Remarks on geometric phases	275
A	Enhanced coursework	279
A.1	Problem formulations	279
A.1.1	Formulations of simple mechanical systems . . .	279
A.1.2	The bead sliding on a rotating hoop	280
A.1.3	Equilibrium solutions	284
A.1.4	Spherical pendulum	285
A.2	Hamiltonian examples	289
A.2.1	Criteria for canonical transformations	289
A.2.2	Complex phase space: Oscillator variables . . .	292
A.3	2D resonant oscillators	295
A.3.1	1 : 1 resonance	296
A.3.2	1 : -1 resonance	300
A.4	The rigid rotor	302
A.4.1	Examples of \mathbb{R}^3 bracket dynamics	304

A.5	Hamiltonian vector fields	306
A.6	Lie derivatives and differential forms	314
A.7	Elastic spherical pendulum & rigid body	320
A.8	$m_1 : m_2$ Poincaré sphere	325
A.8.1	$m_1 : m_2$ resonant harmonic oscillators	325
A.8.2	Multi-sheeted polar coordinates	326
A.8.3	Resonant $m_1 : m_2$ torus	327
A.9	Spherical pendulum: \mathbb{R}^3 bracket	328
