<b>Preface</b>	<b>vii</b>
<b>1. Historical Perspectives: From Camera Obscura to 4D Imaging</b>	<b>1</b>
<b>2. Concepts of Coherence: Optics, Diffraction, and Imaging</b>	<b>15</b>
2.1 Coherence — A Simplified Prelude	15
2.2 Optical Coherence and Decoherence	18
2.3 Coherence in Diffraction	22
2.3.1 Rayleigh criterion and resolution	22
2.3.2 Diffraction from atoms and molecules	27
2.4 Coherence and Diffraction in Crystallography	29
2.5 Coherence in Imaging	34
2.5.1 Basic concepts	34
2.5.2 Coherence of the source, lateral and temporal	40
2.5.3 Imaging in electron microscopy	42
2.6 Instrumental Factors Limiting Coherence	48
<b>3. From 2D to 3D Structural Imaging: Salient Concepts</b>	<b>53</b>
3.1 2D and 3D Imaging	55
3.2 Electron Crystallography: Combining Diffraction and Imaging	61
3.3 High-Resolution Scanning Transmission Electron Microscopy	63
3.3.1 Use of STEM for electron tomography of inorganic materials	67
3.4 Biological and Other Organic Materials	69
3.4.1 Macromolecular architecture visualized by cryo-electron tomography	70
3.5 Electron-Energy-Loss Spectroscopy and Imaging by Energy-Filtered TEM	73
3.5.1 Combined EELS and ET in cellular biology	75
3.6 Electron Holography	77
<b>4. Applications of 2D and 3D Imaging and Related Techniques</b>	<b>83</b>
4.1 Introduction	83
4.2 Real-Space Crystallography via HRTEM and HRSTEM	83
4.2.1 Encapsulated nanocrystalline structures	83

4.2.2 Nanocrystalline catalyst particles of platinum	84
4.2.3 Microporous catalysts and molecular sieves	86
4.2.4 Other zeolite structures	88
4.2.5 Structures of complex catalytic oxides solved by HRSTEM	89
4.2.6 The value of electron diffraction in solving 3D structures	92
4.3 Electron Tomography	94
4.4 Electron Holography	95
4.5 Electron Crystallography	100
4.5.1 Other complex inorganic structures	101
4.5.2 Complex biological structures	103
4.6 Electron-Energy-Loss Spectroscopy and Imaging	107
4.7 Atomic Resolution in an Environmental TEM	111
4.7.1 Atomic-scale electron microscopy at ambient pressure by exploiting the technology of microelectromechanical systems	116
<b>5. 4D Electron Imaging in Space and Time: Principles</b>	<b>123</b>
5.1 Atomic-Scale Resolution in Time	123
5.1.1 Matter particle–wave duality	123
5.1.2 Analogy with light	126
5.1.3 Classical atoms: Wave packets	127
5.1.4 Paradigm case study: Two atoms	130
5.2 From Stop-Motion Photography to Ultrafast Imaging	134
5.2.1 High-speed shutters	134
5.2.2 Stroboscopy	138
5.2.3 Ultrafast techniques	139
5.2.4 Ultrafast lasers	143
5.3 Single-Electron Imaging	147
5.3.1 Coherence of ultrafast packets	147
5.3.2 The double-slit experiment revisited	152
5.3.3 Ultrafast versus fast imaging	154
5.3.4 The velocity mismatch and attosecond regime	157
5.4 4D Microscopy: Brightness, Coherence and Degeneracy	162
5.4.1 Coherence volume and degeneracy	164
5.4.2 Brightness and degeneracy	168
5.4.3 Coherence and Contrast	172
5.4.4 Contrast, dose, and resolution	174
<b>6. 4D Ultrafast Electron Imaging: Developments and Applications</b>	<b>179</b>
6.1 Developments at Caltech — A Brief History	179

6.2 Instruments and Techniques	181
6.3 Structure, Morphology, and Mechanics	195
6.3.1 Selected-area image (diffraction) dynamics	195
6.3.2 Dynamical morphology: Time-dependent warping	196
6.3.3 Proof of principle: Gold dynamics	199
6.3.4 Prototypical case: Graphite in 4D space	204
6.3.4.1 Atomic motions	204
6.3.4.2 Coherent resonances in diffraction: Longitudinal Young's modulus	208
6.3.4.3 Resonances in images: Longitudinal elasticity	211
6.3.4.4 Emergence of mechanical drumming: Transverse elasticity	213
6.3.4.5 Moiré fringe dynamics	216
6.3.4.6 FEELS: Femtosecond EELS and chemical bonding	218
6.4 Selected Other Applications	221
6.4.1 Structural phase transitions	223
6.4.1.1 Metal–insulator transformation	223
6.4.1.2 Transient phases of superconducting cuprates	227
6.4.2 Nucleation and crystallization phenomena	230
6.4.3 Interfaces and biological assemblies	234
6.4.3.1 Water on hydrophobic and hydrophilic substrates	234
6.4.3.2 Bilayers, phospholipids, and cells	237
6.4.4 Nanomechanical and optoelectronic systems	242
6.4.4.1 Channel gating	242
6.4.4.2 Functional cantilevers	245
6.4.4.3 Optoelectronic nanorods	249
6.4.4.4 Diffraction and materials surface charging	253
6.5 4D Convergent Beam UEM: Nanodiffraction	256
6.6 4D Near-Field UEM: Nanostructures and Plasmonics	263
<b>7. The Electron Microscope and the Synchrotron: A Comparison</b>	<b>275</b>
7.1 Introduction	275
7.2 Transmission X-ray Microscopy and X-ray Microscopic Tomography	277
7.2.1 X-ray tomography of biological cells	281
7.3 Coherent X-ray Diffraction Imaging	283
7.4 Extraction of Structures from Powdered Specimens	287
7.4.1 Extraction of structures from ultramicrocrystalline specimens	288

7.4.2	Energy-dispersive X-ray diffraction	288
7.4.3	X-ray absorption fine structure spectroscopy	290
7.4.4	Combined X-ray absorption and X-ray diffraction for <i>in situ</i> studies of powdered catalysts	293
7.5	Studies of Species in Solution	294
7.6	Laue Crystallography: Static and Dynamic	297
7.7	The Perennial Problem of Radiation Damage	299
7.8	Summarizing Assessment	301
<b>8.</b>	<b>4D Visualization: Past, Present, and Future</b>	<b>309</b>
8.1	Visualization and Complexity	309
8.2	Complexity Paradox: Coherence and Creative Chaos	314
8.3	From 2(3)D to 4D Microscopy	316
8.4	Emerging Developments	321
8.4.1	Materials science	321
8.4.2	Biological UEM	323
8.4.3	Structural dynamics: Theory and experiment	324
8.4.4	Aligned- and single-molecule imaging	330
8.4.5	Imaging with attosecond electrons	333
8.5	Epilogue	337
	<b>Biographical Profiles</b>	<b>343</b>
