

CONTENTS

Preface to the 3rd Edition	vii
Acknowledgments	ix
CHAPTER 1 INTRODUCTION	1
1.1 Definition of materials degradation	1
1.2 Definition and significance of surface engineering	4
1.3 Classification of materials degradation by physical mechanism	5
1.4 Economic and technical significance of materials degradation	7
1.5 Summary	9
PART 1: MECHANISMS OF MATERIALS DEGRADATION	11
CHAPTER 2 MECHANICAL CAUSES OF MATERIALS DEGRADATION	13
2.1 Introduction	13
2.2 Wear	13
2.2.1 Adhesive wear	16
2.2.2 Abrasive and erosive wear	22
2.2.3 Wear induced by mechanical fatigue of the worn surface	31
2.2.4 Melting wear, fretting wear and diffusive wear	33
2.2.5 Analytical models of wear	42
2.2.6 Wear resistant materials	44
2.3 Fatigue, fracture and creep	47
2.3.1 Mechanisms of fatigue and creep	48
2.3.2 Fatigue and creep resistant materials	63
2.4 Summary	64

CHAPTER 3	CHEMICAL CAUSES OF MATERIALS DEGRADATION	67
3.1	Introduction	67
3.2	Corrosion of metals in aqueous media	68
3.2.1	Electrochemistry and aqueous corrosion	69
3.2.2	Electrochemical corrosion of machinery and structures	89
3.2.3	Corrosion inhibitors	102
3.2.4	Materials factors in aqueous corrosion	111
3.3	Oxidative reactions of metals with oxygen, sulphur and other halogens	116
3.3.1	Durability of corrosion product film and failure of passivation	125
3.4	Softening and embrittlement of wood and polymers in water and other media	134
3.5	Damage to cement and concrete, glass and engineering ceramics	138
3.6	Dissolution of metals and ceramics in liquid metals, alkalis and salts	148
3.7	Biochemical and biological modes of materials degradation	151
3.8	Corrosion resistant materials	158
3.9	Summary	160
CHAPTER 4	MATERIALS DEGRADATION INDUCED BY HEAT AND OTHER FORMS OF ENERGY	165
4.1	Introduction	165
4.2	Thermal degradation of materials	165
4.2.1	Materials degradation at very low temperatures	169
4.3	Photochemical degradation of polymers	170
4.4	High energy radiation damage of materials	171
4.5	Summary	174
CHAPTER 5	DUPLEX CAUSES OF MATERIALS DEGRADATION	175
5.1	Introduction	175
5.2	Wear in a corrosive or chemically active environment	175
5.2.1	Corrosive and corrosive-abrasive wear	176
5.2.2	Oxidative and corrosive effects on fretting	183
5.2.3	Abrasive wear in liquid metals	183

5.3	Corrosion fatigue and corrosion embrittlement (SCC)	186
5.4	Summary	189
PART 2: SURFACE ENGINEERING		191
CHAPTER 6 DISCRETE COATINGS		193
6.1	Introduction	193
6.2	Coatings of organic compounds	193
6.2.1	Utility of available organic coatings for different conditions	197
6.2.2	Methods of depositing organic coatings	199
6.2.3	Corrosion problems of organic coatings	200
6.3	Electrochemical coatings	201
6.3.1	Electroplating of metals	201
6.3.2	Anodizing, electroless coatings, chromating and phosphating	204
6.4	Plasma and thermal spraying, plasma-transferred arc, the D gun	207
6.4.1	Plasma and thermal spraying	207
6.4.2	Plasma transferred arc and the D-gun	213
6.5	Vacuum-based coating methods	216
6.5.1	Vacuum deposition	217
6.5.2	Sputtering	217
6.5.3	Ion plating and ion-beam assisted deposition	222
6.5.4	Chemical vapor deposition (CVD) and plasma enhanced CVD	226
6.5.5	Arc evaporation	229
6.6	Friction surfacing, weld overlays and explosive bonding	231
6.7	Advanced coating techniques	235
6.7.1	Diamond-like carbon	235
6.7.2	Electron beam assisted physical vapor deposition	237
6.7.3	Electrostatically assisted combustion chemical vapor deposition	237
6.8	Summary	238
CHAPTER 7 INTEGRAL COATINGS AND MODIFIED SURFACE LAYERS		241
7.1	Introduction	241
7.2	Thermally or mechanically modified surface layers	242

7.2.1	Induction hardening	244
7.2.2	Laser and electron beam surface hardening	249
7.2.3	Shot-peening	252
7.3	Thermochemical methods of coating	255
7.3.1	Galvanization and hot-dipping	256
7.3.2	Carburizing, carbonitriding, nitriding, nitrocarburizing & boronizing	258
7.4	Advanced surface modification technologies (ASMT)	277
7.4.1	Plasma nitriding and plasma carburization	277
7.4.2	Surface alloying by laser and electron beam	281
7.4.3	Ion implantation	282
7.5	Summary	285
CHAPTER 8 CHARACTERIZATION OF SURFACE COATINGS		287
8.1	Introduction	287
8.2	Measurement of surface roughness and coating thickness	288
8.2.1	Surface roughness	289
8.2.2	Coating thickness	294
8.3	Hardness and microhardness analysis	296
8.4	Adhesivity testing	301
8.5	Microstructural evaluation	305
8.6	Chemical analysis	310
8.6.1	Comparison of surface analysis techniques	317
8.7	Residual stress analysis	318
8.8	Special techniques for dynamic testing conditions	324
8.9	Analysis of service characteristics	326
8.9.1	Corrosion testing	327
8.9.2	Wear resistance tests	329
8.9.3	Fracture testing of coatings	331
8.10	Summary	331
PART 3: APPLICATION OF CONTROL TECHNIQUES		335
CHAPTER 9 CONTROL OF MATERIALS DEGRADATION		337
9.1	Introduction	337
9.2	Methodology of analysing materials degradation	337
9.3	Selection of optimal surface engineering technology	339
9.4	Control of wear by surface engineering	340

9.4.1	Principles of coating selection for wear resistance	340
9.4.2	Selection of specific surface engineering techniques for specific wear mechanisms	343
9.5	Control of corrosion by surface engineering	345
9.6	Control of fatigue and fracture by surface engineering	347
9.6.1	Discrete surface coatings	349
9.6.2	Integral coatings and surface modified layers	351
9.7	Summary	352
CHAPTER 10 FINANCIAL AND INDUSTRIAL ASPECTS OF MATERIALS DEGRADATION AND ITS CONTROL		355
10.1	Introduction	355
10.2	Financial analysis of materials degradation control	355
10.2.1	Options analysis of financial gain	356
10.2.2	Modeling financial benefit in terms of reduced depreciation	361
10.2.3	Implications of behavioral finance	362
10.2.4	Accounting accuracy and difficulties in reliable measurement of savings in operating costs	363
10.3	Practical aspects of implementing new forms of surface engineering	363
10.4	Evaluation of control of materials degradation in terms of value to the company or institution	364
10.5	Summary	365
APPENDIX 1		367
APPENDIX 2		379
APPENDIX 3		383
